AUTHOR	Moss, Judith
TITLE	S.I.Q.--Student Information Questionnaire: A Survey of Student Characteristics, Fall 1984.
INSTITUTION	San Francisco Community Coll. District, Calif.
PUB DATE	May 85
NOTE	673p.; For an earlier survey, see ED 175 512.
PUB TYPE	Reports - Research/Technical (143) -- Statistical Data (110)
EDRS PRICE	MF04/PC27 Plus Postage.
DESCRIPTORS	Academic Aspiration; Age; Community Colleges; Ethnicity; Homosexuality; Lesbianism; Multicampus Districts; Place of Residence; *Student Characteristics; *Student Educational Objectives; Student Financial Aid; Two Year Colleges; *Two Year College Students
IDENTIFIERS	San Francisco Community College District CA

ABSTRACT

Designed to serve academic, student services, and administrative needs, this report provides information about the characteristics and programs of students enrolled in the San Francisco Community College District (SFCCD). Part I, section 1, provides an introduction and overview, including a profile of district students, historical perspectives on students enrolled at SFCCD centers and the City College of San Francisco (CCSF), and a summary of salient factors affecting college planning. Section 2 presents data on students enrolled at SFCCD centers, including information on students' age, race/ethnicity, discipline, objectives, residence, date of last class, funding, time of class, and sexual orientation; while section 3 contains the same information for CCSF students. Section 4 includes a discussion of study methodology and validity; copies of the questionnaires, codes, and maps; summary tables for 1984 enrollments and previous years (1972-1984); and available data on gay men and lesbians. Part II provides copies of the various computer runs pertaining to sections 2 and 3 of Part I. (AYC)

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."

The San Francisco Community College District consists of two instructional divisions — City College of San Francisco and the Community College Centers, formerly the Adult Education/Adult Occupational Education Division. Through the college credit offerings of City College and the non-credit offerings of the Community College Centers, the District provides a broad spectrum of educational services to adult citizens of the City and County of San Francisco.

The District is governed by an elected seven-member Governing Board.

GOVERNING BOARD

Julie Tang, President
Ernest "Chuck" Ayala, Vice President
Amos C. Brown, Sr.
Robert E. Burton
John Riordan
Dr. Tim Wolfred
Alan S. Wong

Hilary Hsu
Chancellor Superintendent

Dr. Carlos Brazil Ramirez
President
City College of San Francisco

Nancy Swadesh
Interim President
Community College Centers

33 Gough Street
San Francisco, California 94103
(415) 239-3000

It is the policy of the San Francisco Community College District to provide all persons with equal employment and educational opportunities regardless of race, color, religion, sex, sexual orientation, national origin, marital status, age or handicap. District grievance procedures will be followed for compliance with Title IX and Section 504 requirements.

Preface

In Fall 1984 the San Francisco Community College District enrolled some 55,035 students. Of these 22,571 were enrolled at City College of San Francisco in credit programs and 32,364 students at the Community College Centers, in credit-free or non-credit courses and programs. In order to meet the needs of these students, as well as potential students in our San Francisco population, we must know who they are, their backgrounds and their aspirations. This conforms to our notion of strategic planning for the District.

Mr. Kenichi Ohmae, managing director of McKinsey & Co. discusses strategic planning in a "Wall Street Journal" article published December 24, 1984, and although concerning business opportunities, it is applicable to an educational institution. He recognizes the difficulty of market definition in a fast-growing or fast-changing environment and therefore "demand forecasts may not be possible... (organizations) need to reassess their products as markets and technologies change, and that takes planning." He continues to express the need for a new look rather than a continuing "roll-over" of existing plans because of now faulty assumptions and concludes stressing the "need for continuous information about customers."

Program review is our significant mechanism for reassessing our product and the biennial S.I.Q. recognizes the need for "continuous information about customers", our students.

The S.I.Q. (Student Information Questionnaire) is the survey mechanism we use to learn about our students and this volume summarizes the results of our seventh biennial S.I.Q. study. But a summary cannot do justice to the primary value of the S.I.Q. survey. This document will serve as a resource to answer the many specific questions that individual readers may have about students with special characteristics or in special programs. It serves academic, student services and administrative needs. In addition to published tables, comparable tables for each of the individual Centers which comprise the Centers Division are available for further research.

This summary highlights facts about our student body and demonstrates their great diversity. It notes the changes over the years and thus emphasize the need for flexibility in our program and service offerings. We trust the reader will find our S.I.Q. useful both in understanding our present student body and planning to meet their needs. In our search for understanding, we move closer to our goal of excellence.

This S.I.Q. volume could not have been published without the support of many people throughout the District. Of course it first required the enthusiastic encouragement of Hilary Hsu, Chancellor. In particular, Maxwell Gillette and William G. Chinn who coordinated the administration of the S.I.Q. at the Centers and City College respectively, deserve our appreciation for that massive job well done as does Dan St. John for solving the myriad of problems to produce the computer runs. Carmen Espana has again done a yeoman job typing this report and Sam Yee was responsible for the production of this volume.

Without the cooperation of administrators, faculty and staff we could not have completed this survey and of course a special word of appreciation to all the students who took the time and had the interest to tell us about themselves.

All users of this document are indebted to all these people to whom I add my personal thanks for making my job easier.

Introduction and Overview

1.a
Introduction

By 1972 we were increasingly aware of the importance of knowing about our students, their backgrounds and their goals, both to better meet their educational and related service needs and to plan for changes in numbers and characteristics of our student body. At the same time we were inundated with requests from the legislature and other public bodies for more information about our institution. We needed more hard facts than we had. Because students in the non-credit programs enrolled in each class and only individual manual records were maintained, summary information about our non-credit student population could not be readily obtained. We therefore initiated the S.I.Q. (Student Information Questionnaire) in Fall 1972 at the Adult/Occupational Division, the forerunner of the Community College Centers Division.

Although the student enrollment process at City College provided more student data in computer files, only some of it could readily be drawn off in a useful form for analytic purposes and other desired element were not at all available. Therefore in 1976 the S.I.Q. was undertaken at City College also and it has been conducted biennially in each division since then.

Consideration was given to dropping the S.I.Q. during the early Proposition 13 period but by then its value had been well demonstrated as a planning tool and it was important not to lose any trend data. Although we now have a more timely and complex computer system, the S.I.Q. process is still needed; the process used is a continuously updated version of the one developed in 1972. The automated enrollment system, for the must part, does not include the S.I.Q. questions; as S.I.Q. responses are anonymous we can ask for information which might not be appropriate in a student-identified file. We are pleased with the S.I.Q. process although we recognize that a significant drawback in anonymous questionnaires is not having the ability to do any student follow-up, for example how a particular student's educational objectives have changed or how they have been met. Therefore in 1986 we will again consider the S.I.Q. process to determine whether it should be modified or replaced by expansion of registration data. Consideration also will be given to adding more programmatic information to the S.I.Q. process at City College comparable to the Centers to give it added value.

Different questionnaires and survey processes were used at the Centers and for day and evening divisions of City College. Where possible, the questions were the same on both the College and Centers questionnaire forms, in particular the basic demographic questions. But other questions either were reworded to be division-specific or designed to fit a specific divisional need. In so far as possible questions were kept constant from year to year to provide the capability for trend analysis but when deemed important, a new one was added and perhaps an old one dropped. Methodology and cautions are discussed in a later section.

Report Organization

This report presents a District overview and analysis of the students of the Centers Division and of City College. In the discussions included in this report, every possible fact or interpretation will not be mentioned but only the significant ones; rather only the ones the author thought were of general significance. Readers are encouraged to make their own analyses of the data presented in this volume.

Section 1 presents a profile of the District's current students and an historic perspective of Centers and College students since 1972, the start of the S.I.Q. It is then followed by a summary of selected salient facts which may have significant bearing on how we prepare for the future.

Section 2 describes the Centers students from different perspectives dependent upon the specific cross tabulations used and section 3 does the same for the City College students. The reader may find some redundancy in each segment necessary so that each may be read independently dependent upon the reader's interests. The reader is referred to the comprehensive computer runs in Part II for more detail.

Section 4 is the technical section which includes a discussion of methodology and validity and includes copies of the questionnaires, codes and maps. It also includes summary tables for 1984 enrollment as well as historical series and data now available on gay men and lesbians.

Part II includes copies of the various computer runs referred in Sections 2 and 3. Each computer run presents the number and percent distribution of responses to each question spread by possible attributes, for example spread by ethnicity, which enables all responses for each ethnic group to be compared. Relationships relevant to the reader's specific area of interest will soon become apparent. This is an instance where "browsing" should have a large pay-off. The S.I.Q. is a resource document.

Computer runs for each Center comparable to the ones in Part II for all Centers combined are available (at each Center, in the President's Office and in the District Research Office). For most purposes, this document is all the user will need but Centers staff will want to use the individual Center reports as may others with special interests.

The casual reader who wants only a general overview of San Francisco Community College District students will find the next chapter to serve that purpose. The general reader should complete Section 1 and continue in areas of special interest. The reader may want to refer to the appropriate computer-generated tables in Part II as specific portions of Sections 2 and 3 are reviewed. It is difficult to absorb all the facts available; rather the facts are there when the need is defined.

1.b

Overview

Profile of District Students

The official Fall 1984 enrollment figure for day students at City College was 14,971 and evening division enrollment was 7,700 resulting in a total enrollment at City College of 22,671. There were 32,364 students registered in the Centers Division which resulted in a District-wide student body of 55,035. During the year we serve many more persons because of the following factors:

1. New students enroll, not only at the start of each semester but all during the year in short courses and in non-credit classes with open enrollment.
2. Students drop out before Census week and are therefore not included in the Census week count.
3. Students in community service and contract education courses, for which state apportionment is not earned, are excluded.

The enrollment count also is not indicative of WSCH (Weekly Student Contract Hours) or ADA (Average Daily Attendance) because it does not reflect full-time versus part-time enrollments or varied student loads. Nevertheless the number of students we serve at a given time, Census week, is an indicator of the magnitude of our educational programs and services and useful for trend analyses. This section describes the characteristics of San Francisco Community College District students attending in 1984. Where appropriate, comparisons will be made with San Francisco population.

In 1980, U.S. Census data indicated San Francisco's population to be 678,974 persons. The California Department of Finance has now estimated July 1, 1984 population to be 711,800 or an increase of 4.8% in four years but still slightly less than the 1970 population of 714,000. On a statewide basis the population increase could be attributed to births entirely. Deaths offset the net in-migration. Although these new population estimates might result in a slightly different demographic mix than reported in 1980 Census releases, any discussion of Census data will refer to the available 1980 data.

We know about our students from our S.I.Q. (Student Information Questionnaire). For a District overview, the S.I.Q. distributions for each segment, day and evening at City College and all students at the Centers, were applied to the official enrollment counts given above and then totaled. That data presented in Section 4 tables are described following.

In Fall 1984, of the 55,035 district students female students outnumber male students by a ratio of 55 to 45 primarily because almost six of ten Centers students are women. City College day enrolls just slightly more men; in the evening division women outnumber men. This compares with a 50:50 split in the San Francisco population over 18 as recorded in the 1980 Census.

The typical San Francisco Community College District student is 30 years old and 60% are in the prime career development years of 21-44. College students attending in the daytime are younger with a median age of 22; the median at the Centers is 35. About 43% of college day students are twenty or younger, emphasizing that the traditional college day student, the recent high school graduate, 17 through 20 years old, although no longer the dominant cohort is still a significant segment of City College. Almost one in four are 21 through 24 years old and another one in four are 25 through 34 years old with only 10 percent who are 35 or older. More than 75% percent of evening students at City College are in their prime career advancement years of 21 through 44 with about 10% younger and 10% older. Centers students are more evenly distributed among all age groups. Nevertheless, 58% are between 21 and 45. Some 18% are 60 or older compared to 2% of College students.

San Franciscans 21-44 comprise 51% of all those San Franciscans eighteen and older and 61% of our student body emphasizing our serving those in their prime career years. In 1984 we were serving 32,728 students aged 21 through 44 or 11.4% of the San Franciscans in that age bracket. Our 55,035 students are almost 10% of all San Franciscans eighteen or older; that is, one of ten eligible San Franciscans is attending a District class. These comparisons are shown in table following.

	San Francisco	SFCCD	% of San Francisco
Total	678 974	55 035	8.1
18 or older	562 363	53 816	9.6
21-44	286 604	32 728	11.4
21-44 as % of 18 and older	51.0	60.8	

Some 73% of our students are members of an ethnic minority, a significantly higher proportion than the 48% in the San Francisco population recorded for 1980. The ethnic composition of the student body varies considerably among the educational programs, and differences in student composition are significant between City College and the Centers. ESL classes primarily at the Centers, serve mainly Asian and Hispanic students and to some degree explains the difference in student ethnicity between City College and the Centers.

We serve a larger proportion of Chinese students than one would expect from the San Francisco population mix particularly in the Centers and at College day. Hispanics are somewhat overrepresented at the Centers probably because of ESL classes but there are fewer Hispanics at City College than we might expect from the San Francisco population. Blacks are about 9% of the student population in each division compared to 12% of San Franciscans. The ethnic composition is shown in table following:

Percent Distribution by Ethnicity

	Centers	College		SFCCD	San Francisco
		Day	Night		
White	24	26	44	27	52
Chinese	33	32	18	31	12
Black	9	9	10	9	12
Hispanic	17	10	9	14	12
Other	17	23	19	19	12
Total	100	100	100	100	100

Native born citizens make up 43% of the student population, 33% at the Centers and 56% at the College. This compares with 72% of the total San Francisco population. Naturalized citizens are another 12% of our students and permanent residents total about 36%. Those on refugee visas, mostly Southeast Asians, equal another 6%. The high number of permanent residents and refugees are a reflection of the drawing power of our ESL program.

Language spoken at home is very closely related to ethnicity. Table following shows the distribution of ethnicity compared to their probable language spoken at home.

Ethnicity		Language Spoken at Home	
Black	9.3	English	45.4]
White	27.3		]
Hispanic	14.0	Spanish	11.5
Chinese	30.7	Cantonese	23.5
		Mandarin	3.6
Filipino	5.9	Filipino/Tagalog	4.4
Japanese	1.5	Japanese	0.7
Southeast Asian	5.8	Vietnamese	3.6
Other Asians	2.5	Korean	1.2
All Others	3.0	Other	6.1
All	100.0	All	100.0

It can be deduced that although some of the Hispanics and Asians speak English at home, most speak another language. In San Francisco according to the 1980 Census 198,000 or 35% of persons 18 years and over spoke a language other than English at home and of these, 51,800 or 26% did not speak English well or at all. They are potential ESL students. We estimate we are serving 15,211 ESL students or about 30% of the potential at the Centers with some additional ESL students at City College.

Some 45% of District students use public transit, or about 25,000 students. These students may attend classes from one to five days a week. If one assumes, that on an average, the typical student attends classes three days a week, then these 25,000 students contribute about $90,000 weekly to the operations of MUNI and BART. That the Centers offer classes in the neighborhoods where it is needed is evidenced by the fact that 28% of their students walk to class, with a District-wide average of 18%.

Compared to trips to work of San Francisco residents, students are less likely to use a car or a car pool but rely more on walking and public transportation.

	Students to class	Population to work
Car-Driver	29.1	33.8
Car-Pool	4.2	12.5
Public Transportation	44.8	38.6
Walk	18.3	10.9
Other	3.6	4.2
Total	100.0	100.0

About one in ten District students already has a college degree or higher attained in the United States ranging from 6% of College day and 9% of Centers students to 27% of College evening students. This compares with 28% of San Franciscans 25 or older. An additional 7% of our students have a community college degree. These figures do not include those students who may have done college work as part of their foreign education. Some 45% of both College and Centers students report a foreign education. At City College 29% reported that they had at least some College work in their foreign education.

Some 65,560 San Franciscans were enrolled in a college in 1980 according to the Census. As our Fall enrollment count was 55,035, we might be serving 84% of all San Francisco college attendees. However, this comparison is questionable. We do not know, for example, if Centers students responded positively to the Census question on college attendance. Also about 8% of those students with valid local ZIP codes live outside San Francisco, or about 4,400 students. Thus the 84% may be high but certainly we are the dominant factor in post-secondary education in San Francisco.

Almost four of every ten day students at City College and three in ten evening students stated that it was their intention to transfer to a four year college. It is obvious that this transfer goal is optimistic; it would result in more than 10,000 City College students transferring each year. The transfer intent appears to show a very high inverse correlation with student age: the younger the student the higher is the transfer expectation. Of those City College students who do plan to transfer, some 44% expect it will be to San Francisco State and 13% to U.C. Berkeley. Other transfer plans are spread about equally among the other options including other UC and CSU campuses, University of San Francisco and Golden Gate in San Francisco and other public and private institutions.

17% of District students have the immediate goal of learning English, 28% of Centers and 2% of College students. Once accomplished, they may continue on with other goals. For example, students may need to learn English before seeking a degree or getting job training which would result in educational goals in other categories being understated. About 26% of our students do have immediate career goals; occupational goals are higher at the Centers. Another one in six is taking classes to broaden his or her background, primarily at the Centers and in the evening division at City College.

About 23% of the students were attending District classes for the first time, a fairly consistent proportion among all divisions. Almost three in five were continuing students having attended either the prior spring or summer. The remaining 18% were stop-outs, fairly evenly divided between those who had attended a year ago and those who were away longer. The stop-outs were more likely to be students in the evening at City College.

The Centers student on the average attends classes nine hours a week. Some 21% take 18 or more hours per week, most of whom are ESL students; ESL is offered largely in ten hour blocks. The typical College day student is taking twelve units, but 13% are taking 16 or more units and another 13% are taking 5 or fewer units. In the evening division 58% are taking 5 or fewer units but some 15% are full-time students; they may however also be taking day classes and thus be included in the day count. The large number of students taking 4 or 5 units when compared to the number taking 6 units suggests that the imposition of the full $50 fee for 6 or more units does have a serious influence on student course selection.

Some 35% of our students work full-time, ranging from 25% of the College days students to 68% of College evening students; 31% of Centers students work full-time. Concomitant with the high proportion of evening students working full-time, only 5% are seeking work at this time compared to 14% of Centers students and 12% of College day students. Some 8% of Centers students are full-time home-makers and about 13% are retired. Home-makers and retired persons are a very small number in the College.

The question continually arises as to whether we educate our students for jobs in San Francisco or outside of San Francisco. We have no follow-up information to answer that specifically. However we do know that two of every four persons five years or older lived in the same house five years ago. Another one of four lived in a different house but in San Francisco. Thus to the extent that students are representative of the general population something like 75% that our students remain in San Francisco in a five year period. If one assumes that students are more mobile than the general population, we are educating students for society and not specifically for San Francisco needs.

Of those San Francisco residents whose workplace was identified in the Census, 28.6% worked in the Central Business District of San Francisco and 57.0% worked elsewhere in San Francisco, leaving 14.4% commuting out of San Francisco. Almost half commute to San Mateo, a third to the East Bay and the remainder to Marin, Santa Clara and elsewhere. Thus it might be expected that about one in five of our students will work outside of the City: 14% based on general population pattern and some of the 8% who now live outside the City. With increasing numbers of people commuting to San Francisco to work, we might expect increasing numbers of non-San Franciscans in our class so that the proportion working outside the City may remain constant.

Correlating to the occupational pattern, is the pattern of household income. Half the District students report household incomes of $10,000 or less; 56% of Centers students are in that category as are 45% of College days students. Only 24% of evening students at City College are from households with incomes less than $10,000, with 45% reporting household incomes greater than $20,000; the median income was $18,330. These evening students are more similar to the San Francisco population median income level than Centers students whose median income is $8,630 or College day with $11,710. Of San Francisco households in 1979, 31.4% had incomes less than $10,000 and the median income was $15,866. Allowing for inflation since 1979, perhaps 25% had 1984 incomes below $10,000 and the median might be close to $20,000.

Despite the higher household income level of College evening students, some 39% give low fees as their primary reason for selecting CCSF; this compares to 30% of College day students. This differential may relate to the greater family responsibility of the older evening student; we do not have information on family composition. The second most significant reason for selecting CCSF was a special program reported by one in five students in both day and evening. To live at home, perhaps related to economics, was the third most mentioned reason.

At the Centers, one in two learned of the class from a friend, with 14% from either a teacher or counselor and 11% from other inquiry at school. Other forms of publicity, mostly print items, account for the remaining one in four students.

Some 35% of the Centers students felt they did not require any special student services, but of the student services desired, educational program planning was predominant followed in distant second by job placement. Although 57% do not expect to have a problem completing their courses, some 15% recognize a speaking skill problem and 8% reading or writing.

An evaluation question was included in the Centers questionnaire. Some 45% thought instructional quality was excellent and 37% rated it good. Only 5% rated it fair or poor.

Because of the large number of gay men and lesbians in San Francisco, an optional question was included to identify those students if they so chose. We know that about 1,789 homosexual students attend District classes as that was the count of those who identified themselves. It is expected that some homosexual students did not complete this section of the questionnaire and it has been reported that some ESL students may have completed it in error. Those students who identified themselves are as follows:

	City College			Centers	District	
	Day	Night	Total		Number	%
Gay men	340	320	660	361	1 021	57.1
Lesbians	372	193	565	203	768	42.9
Total	712	513	1 225	564	1 789	100.0
Percent	39.8	28.7	68.5	31.5	100.0	

The characteristics of these students were extracted from the various topical computer runs and a summary table is included in Section 4. They are about as diverse a group as the total student body the characteristics of whom are shown in the last column of the Section 4 table. With few exceptions they are similar to all students, probably the differences reflecting the fact that a larger percentage of homosexual students are City College students, and lesser are Center students. Whereas City College serves 41% of all District students it serves 68% of the gay men and lesbian students.

They are somewhat younger; their median age is 28.7 compared to 30.1 for all students. Only 7.2 % are 45 or older compared to 21.5% for the total student body. Lesbians on the average are four years younger than gay men. White homosexuals account for 47% of the gay men and lesbians, compared to 27% of all students; minorities are proportionately lower but the pattern is similar to all students.

Some 30% of the homosexual students are new to District classes this semester compared to 23% of all students. This may reflect the District's efforts to provide relevant services to this group.

Their objectives in attending District class are very similar to all students with a smaller proportion desiring to learn English and larger proportion seeking to change their occupation. This is reflected in the programs undertaken in the Centers where proportionately more gay men and lesbians are taking occupational-preparatory programs than all students and fewer are in ESL programs. The age differential also shows up in program choice; some 1.5% of gay men and lesbians are in programs for the older adult as compared to 7.1% of all students. They are more likely to be in business and computer science classes than consumer education or ESL. At City College, their transfer plans are very similar to all City College students; 65% expect to transfer compared to 69% of all City College students.

It appears that age and ethnicity which is closely related to English speaking ability are the dominant factors which explain significant differences in the distribution of SIQ attributes between the homosexual students and all students with the possible exception of the area of residence. A larger proportion of gay men and lesbians live in the areas defined as Haight-Ashbury and Outer Mission than do all students but nevertheless they live in all areas of the City roughly in the same relationship as all students.

1.c
Historical Perspective
Community College Centers

The S.I.Q. has been a valuable resource operational since 1972. The questions asked of students have been kept constant for the most part so that there might be historic continuity over the years. However, where warranted, questions have been dropped and new ones added and in few cases, the wording has been changed to sharpen the intent. Probably the most significant change in wording was in the income question which was first included in 1976 requesting income of student and spouse, and changed in 1980 to requesting household income. With changing demographics and life styles we felt this would give more consistent and meaningful income responses, and also it was a question included in the 1980 Census.

The series of charts which follow from Centers S.I.Q. data show for each characteristic measured a bar representing the proportion of respondents for each S.I.Q. year. Also shown is a "pie-chart", and comments on significant changes noted in those characteristics. The data for these charts is shown on summary tables in Section 4. Small changes from period to period may be statistically insignificant but data for enough years are available to indicate whether, in fact, trends which might be projected exist or whether there are hints of potential trend reversals.

The most significant change in the student body since 1972 at the Centers Division appears to be in the ethnic mix with very great increases in minority students. The proportion of white students dropped 47% in twelve years, from almost one in two to about one in four in 1984. The proportion of Blacks declined about 25% and Hispanics increased by a like percentage. The proportion of Chinese almost doubled so that now Chinese account for one in three students. Southeast Asians and Other Asian/Pacific Islanders also increased dramatically with the large numbers of refugees entering in the early 1980's.

This change in student ethnicity is clearly reflected in other student characteristics. The proportion of students whose primary educational goal is to learn English has increased about 35% from 20.6% of the students to 27.7%, and with this the median number of hours per week in class increased also. Along with the increase in ESL students, there was an increase in students in occupational programs. From 1980 to 1984 they increased from 17% to 23% of all students. The decreases represent those defunded courses.

Although the proportion of students in the combined high school and G.E.D. program is low, 4.3%, it has been about constant since 1980, the first year that data was available. The proportion of new students who had never attended a Centers class before this semester dropped from 37% in 1976, the first year the question was asked, to 22% now.

The proportion of students who worked full-time has not changed very much from the 1972 level, about one in three; however there was a high of 40% in 1974 and steady decline since then with perhaps a turnaround starting in 1984. Concomitant with that is the increase in those students who are now actively seeking work. Nevertheless, those students who felt job placement services would be a service most used declined from 25% in 1976 when the question was first asked to 14% now. Educational program planning increasingly was the service deemed most useful.

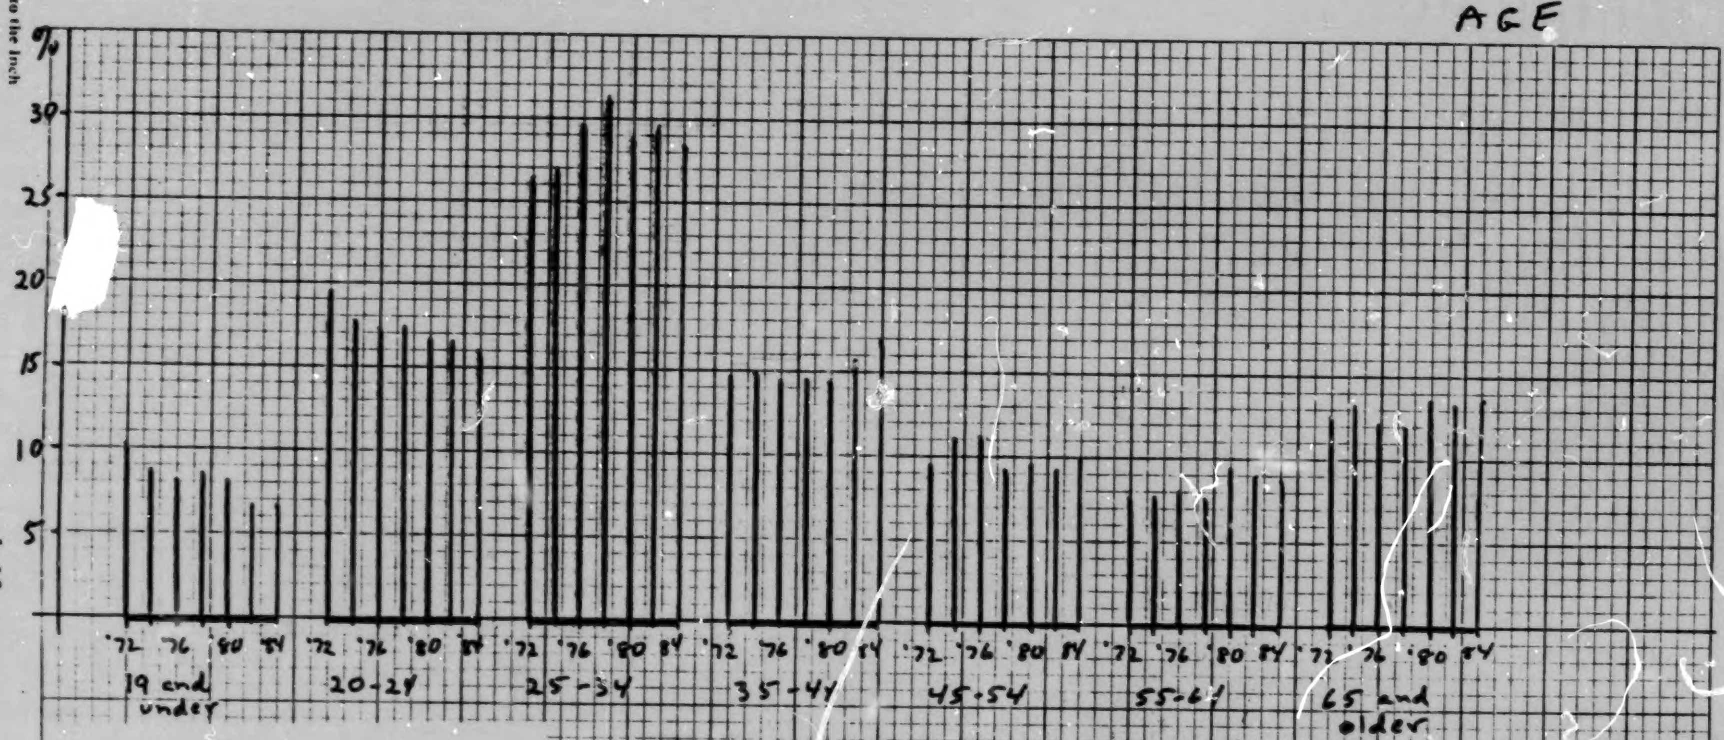
Student household income has been increasing at a decreasing rate. The increase from 1978 to 1980 reflects the change in question concept from individual and spouse to household income. Especially as income is not increasing as fast as the inflationary rate, then in fact, student real income is declining. This probably is related to the observed decline in full-time employment of our students which in turn reflects the larger number of minorities and ESL students.

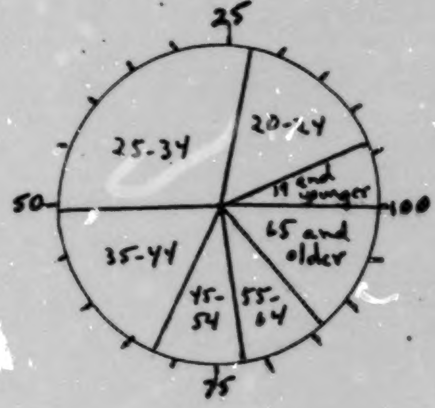
More classes are being held in District facilities such that rental expense would be reduced; 54% of the students attend classes in one of our buildings compared to 32% in 1978, the first year that information was available. There has been a slight trend upwards since 1974 in the proportion of students who attend morning classes, from 37% to 46%. The decline in students in classes after 6:00 p.m. is even greater; from 47% to 26%. This of course impacts on teacher scheduling.

Day students are more likely to take several courses. Thus while in 1974 some 28% of the students were enrolled in two or more classes, in 1984 it had increased to 44%. At the same time fewer classes were held one or two times a week with a concomitant increase of those held four or five days weekly, increasing the median attendance hours per week to 9 from 6 in the 1970's. This again reflects the ESL load.

10 Squares to the Inch

NATIONAL 12-280



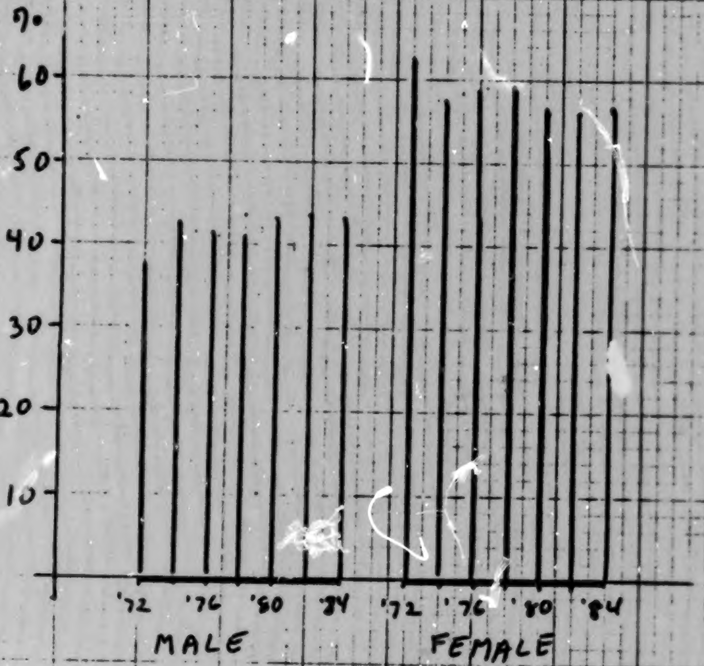


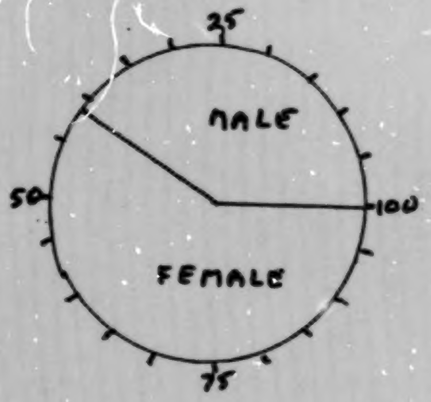
- About half of all students are 35 or older.
- 28% of all students are in the 25-34 year age bracket.
- The 25-34 year old age group is the modal group at each Center accounting for some 23-33% of their respective student bodies except at Mission and John O' Connell with modal populations of 65 and older.
- Since 1972 the younger students under 25 have been declining; they now are less than one in four.
- Those who may be thought to be in career reevaluation years, 35-44, have been increasing in recent years.

BEST COPY AVAILABLE

10 Squares to the Inch

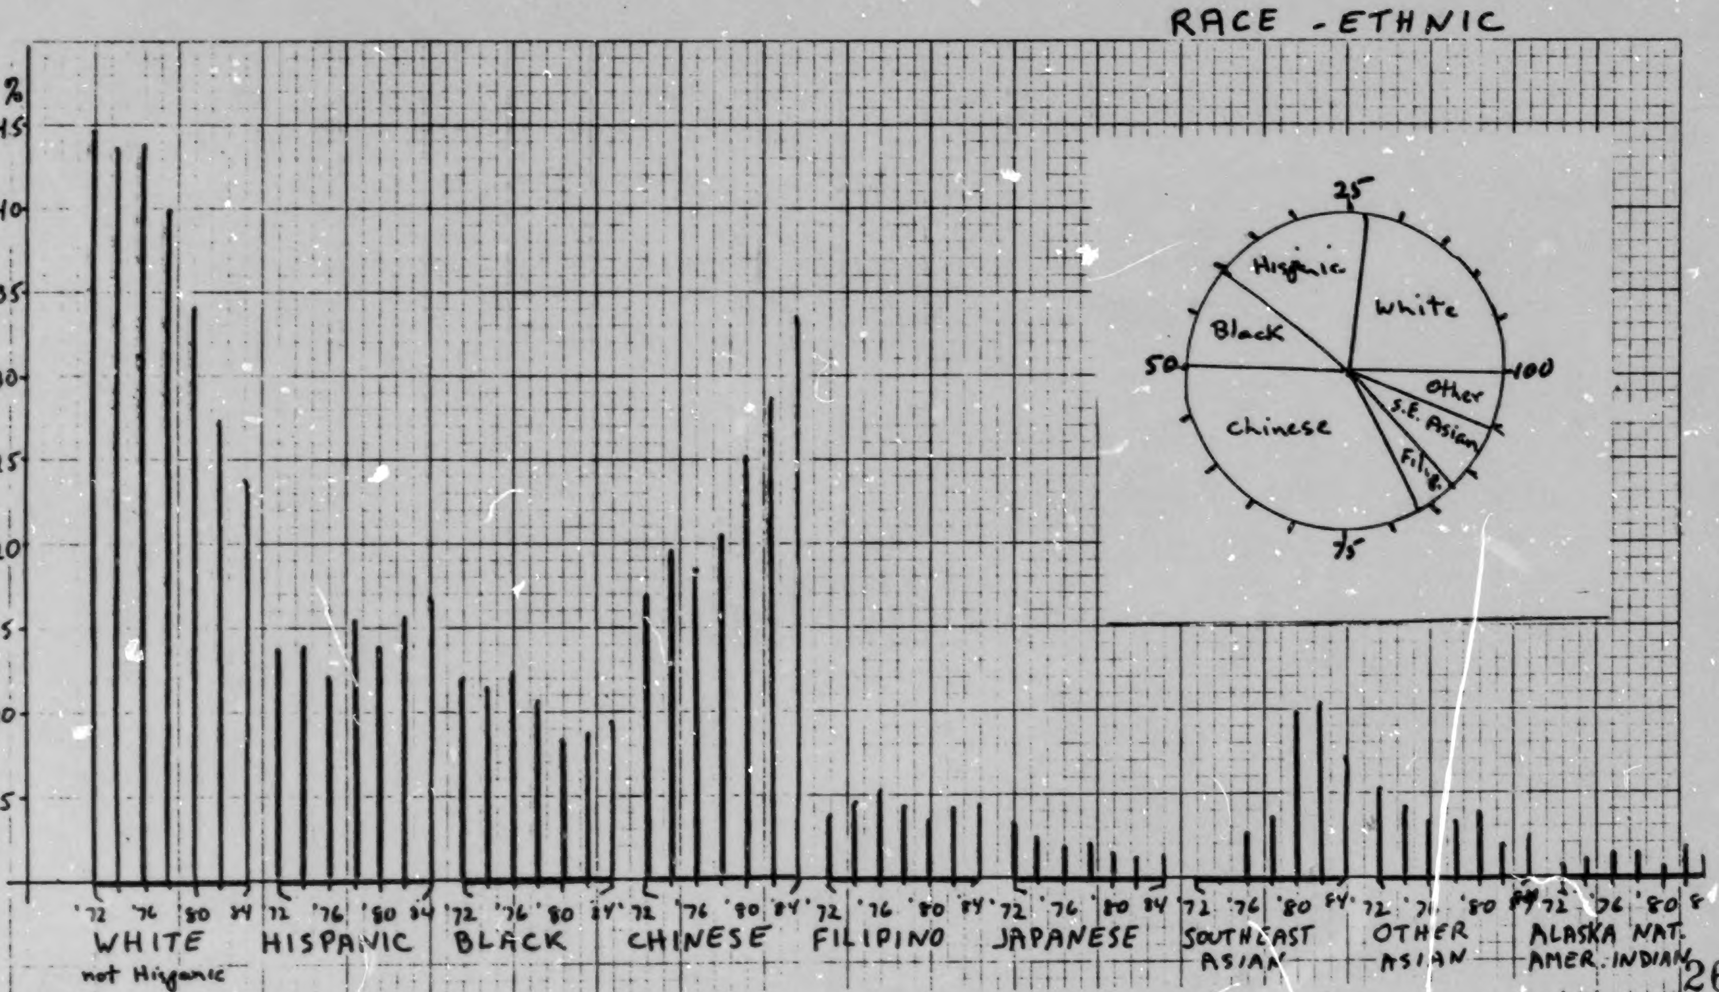
SEX





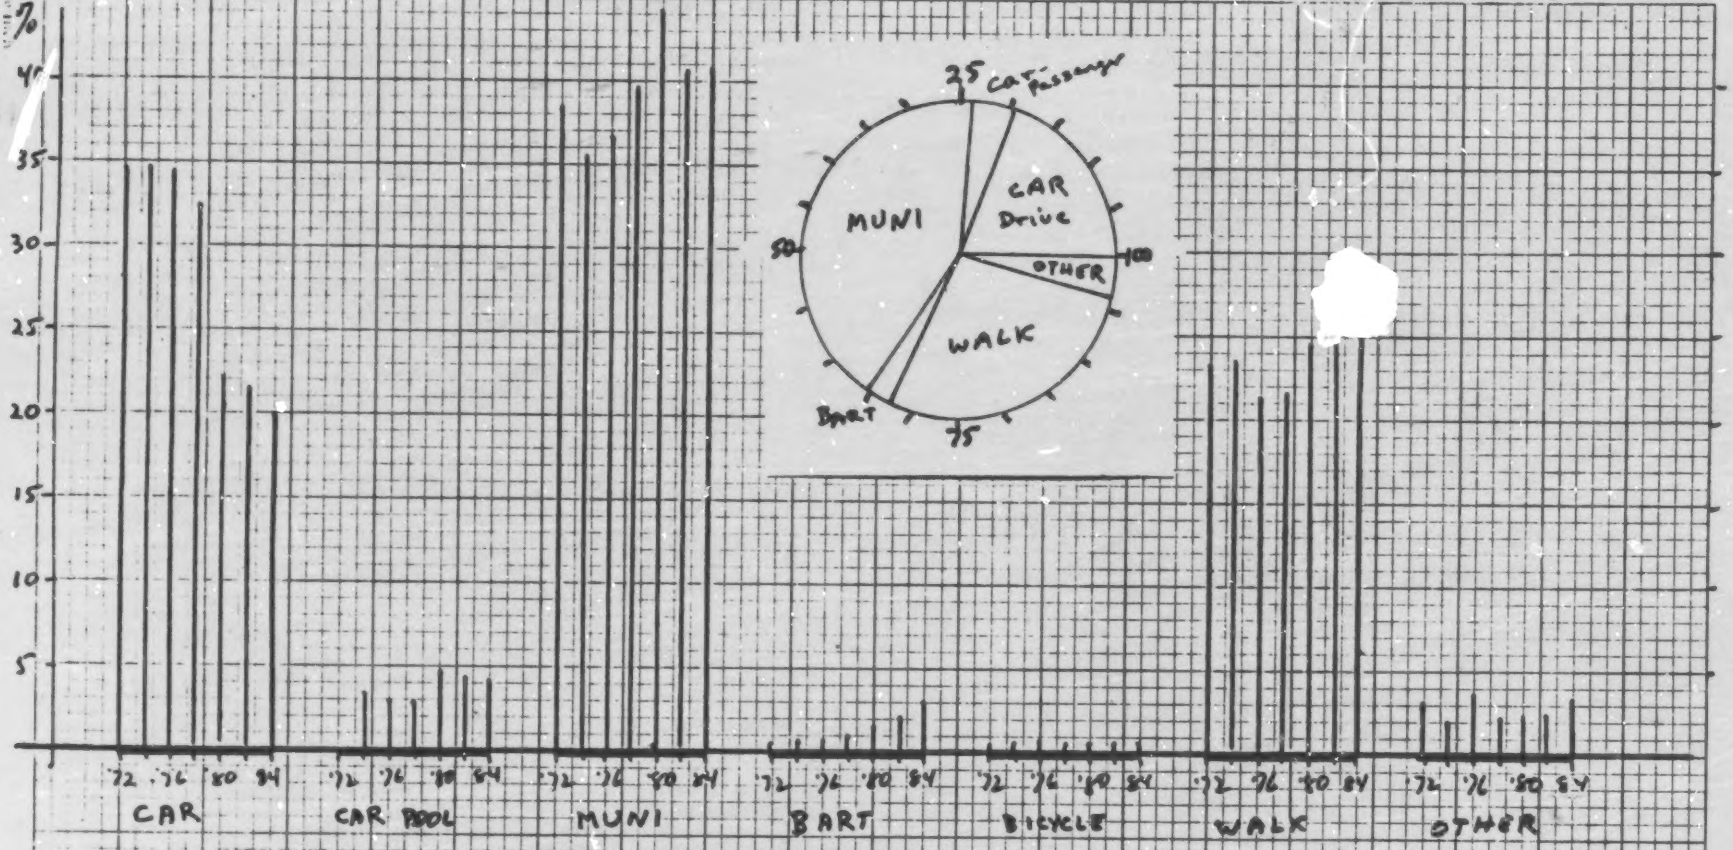
- 58% of students are female compared to 42% male.
- Since 1972, the proportion of male students has increased slightly but the changes from year to year have been slight.
- Many programs are still perceived as being primarily for a single sex and thus the mix at each Center varies dependent upon the programs, generally with a 2:1 variation.
- Alemany comes closest to a balanced Center with 45% men and 55% women; John O'Connell with its shop programs, serves more than twice as many men as women; in 1982 it had been about three to one.
- Skills Center serves many more women, 72% to 28% men.

BEST COPY AVAILABLE



- About three of every four students are of a racial or ethnic minority.
- Of every 100 minority students about 57 are Asian, 12 are Black, 21 Hispanics and 6 Filipino.
- The proportion of Chinese students has increased since 1972 surpassing the number of white students in 1982.
- The proportion of Black and Hispanic students increased in the past two years, apparently reversing the prior decline.
- Southeast Asian students declined at the same time the proportion of Chinese increased.

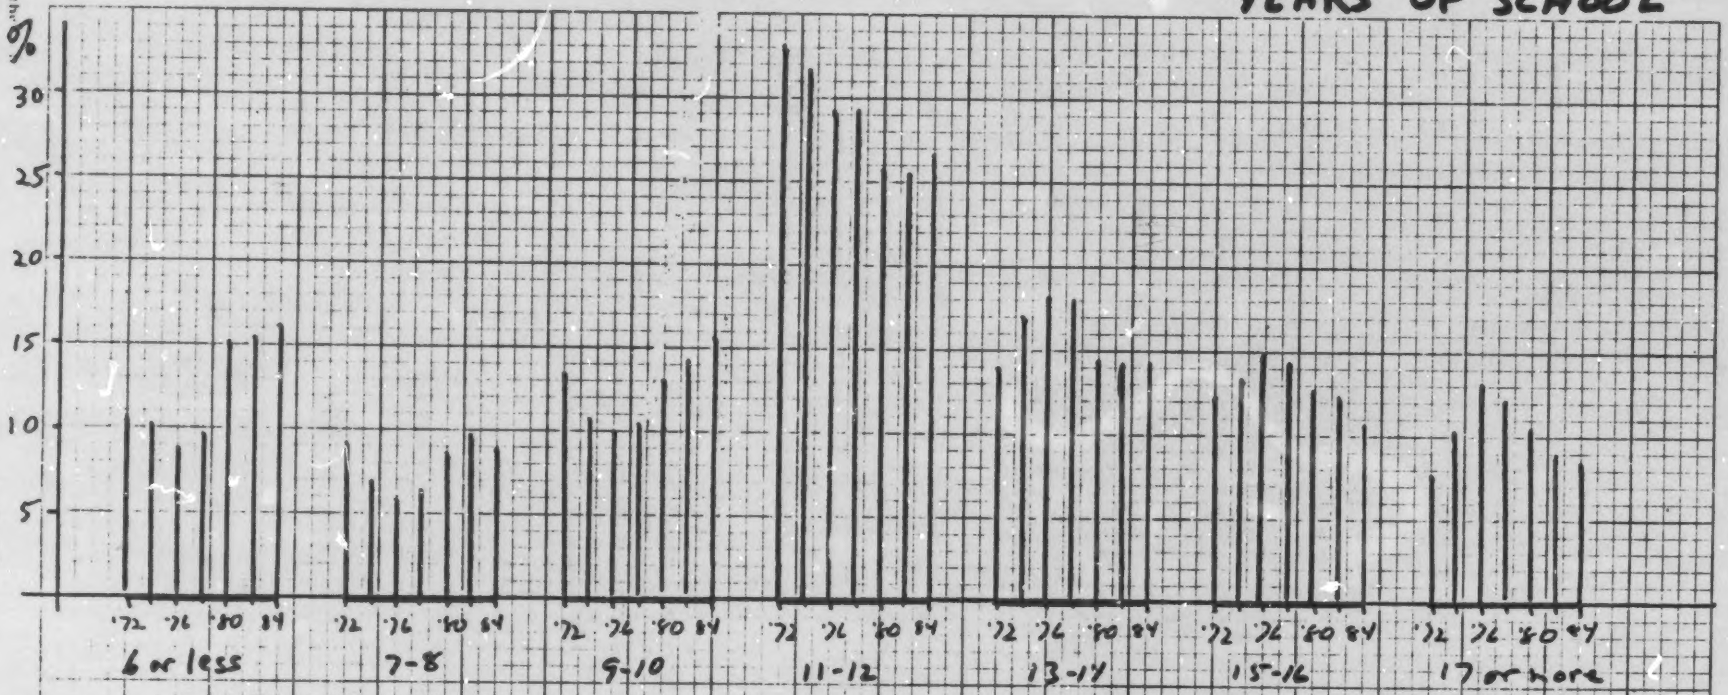
TRANSPORTATION

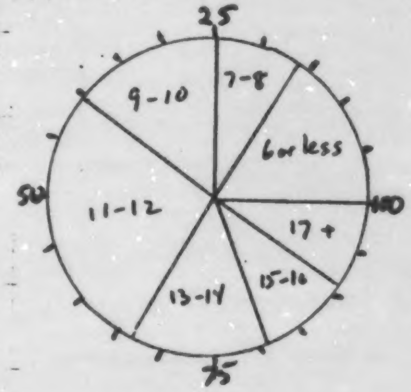


- The proportion of students driving to class decreased considerably from 1978 to 1980 with that trend continuing; about one in four uses a car either as driver or passenger.
- Use of public transportation to get to classes and walking remain at about their 1982 levels, an increase from the earlier years.
- Half of Alemany students use public transit as do 64% at Downtown Center.
- 95% of John O'Connell and 42% of Skills Center students use a car to get to class.
- 48% of Chinatown students walk; the least proportion of walkers is at John Adams where 12% walk.

10 Squares to the
NATIONAL 12-280

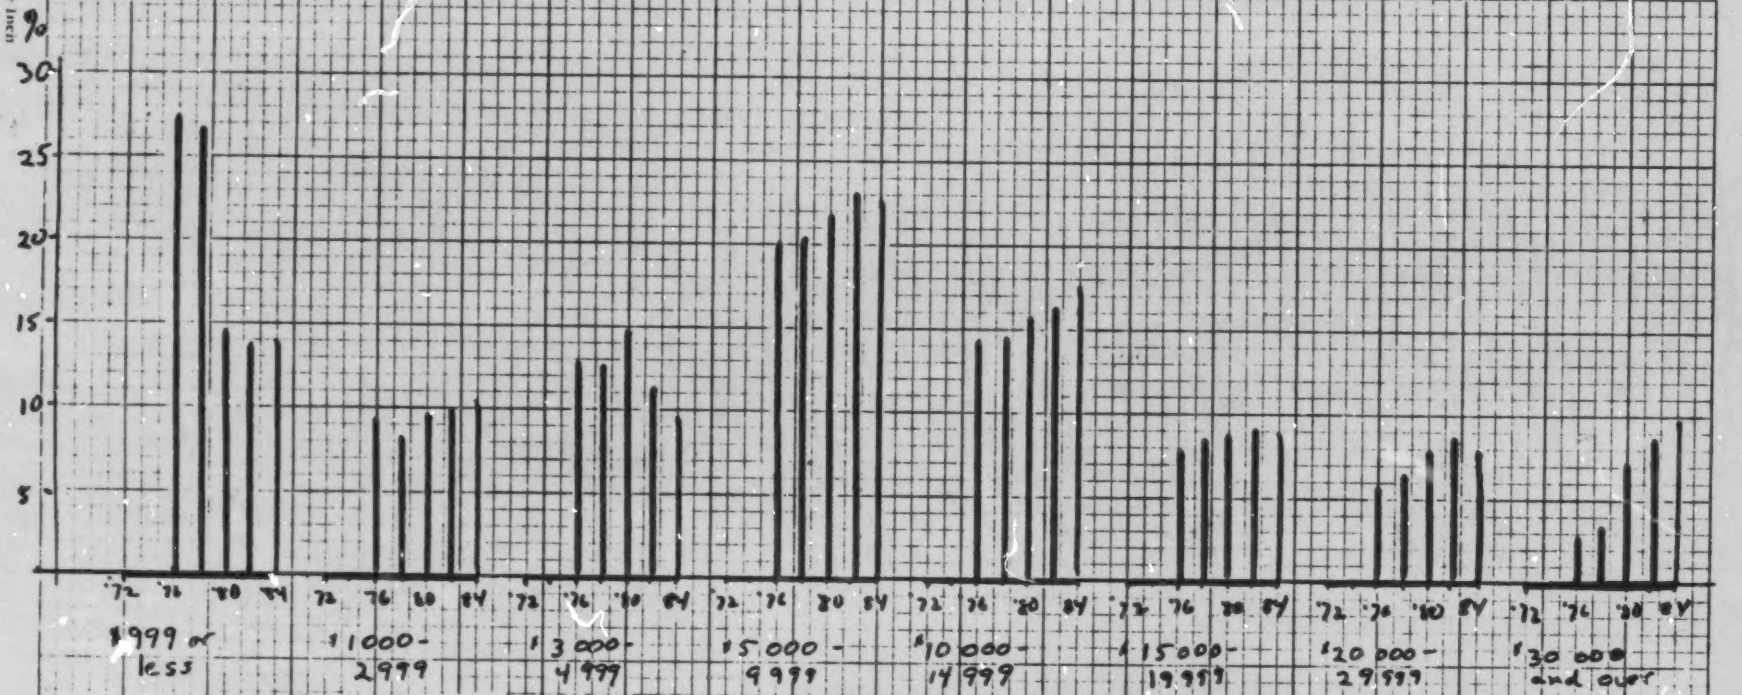
YEARS OF SCHOOL

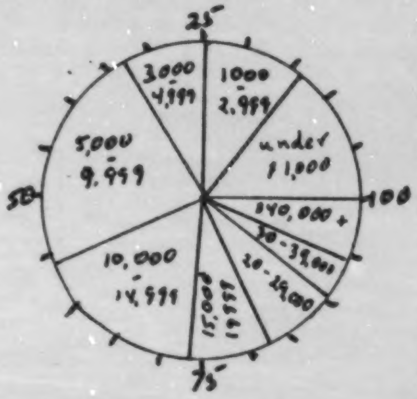




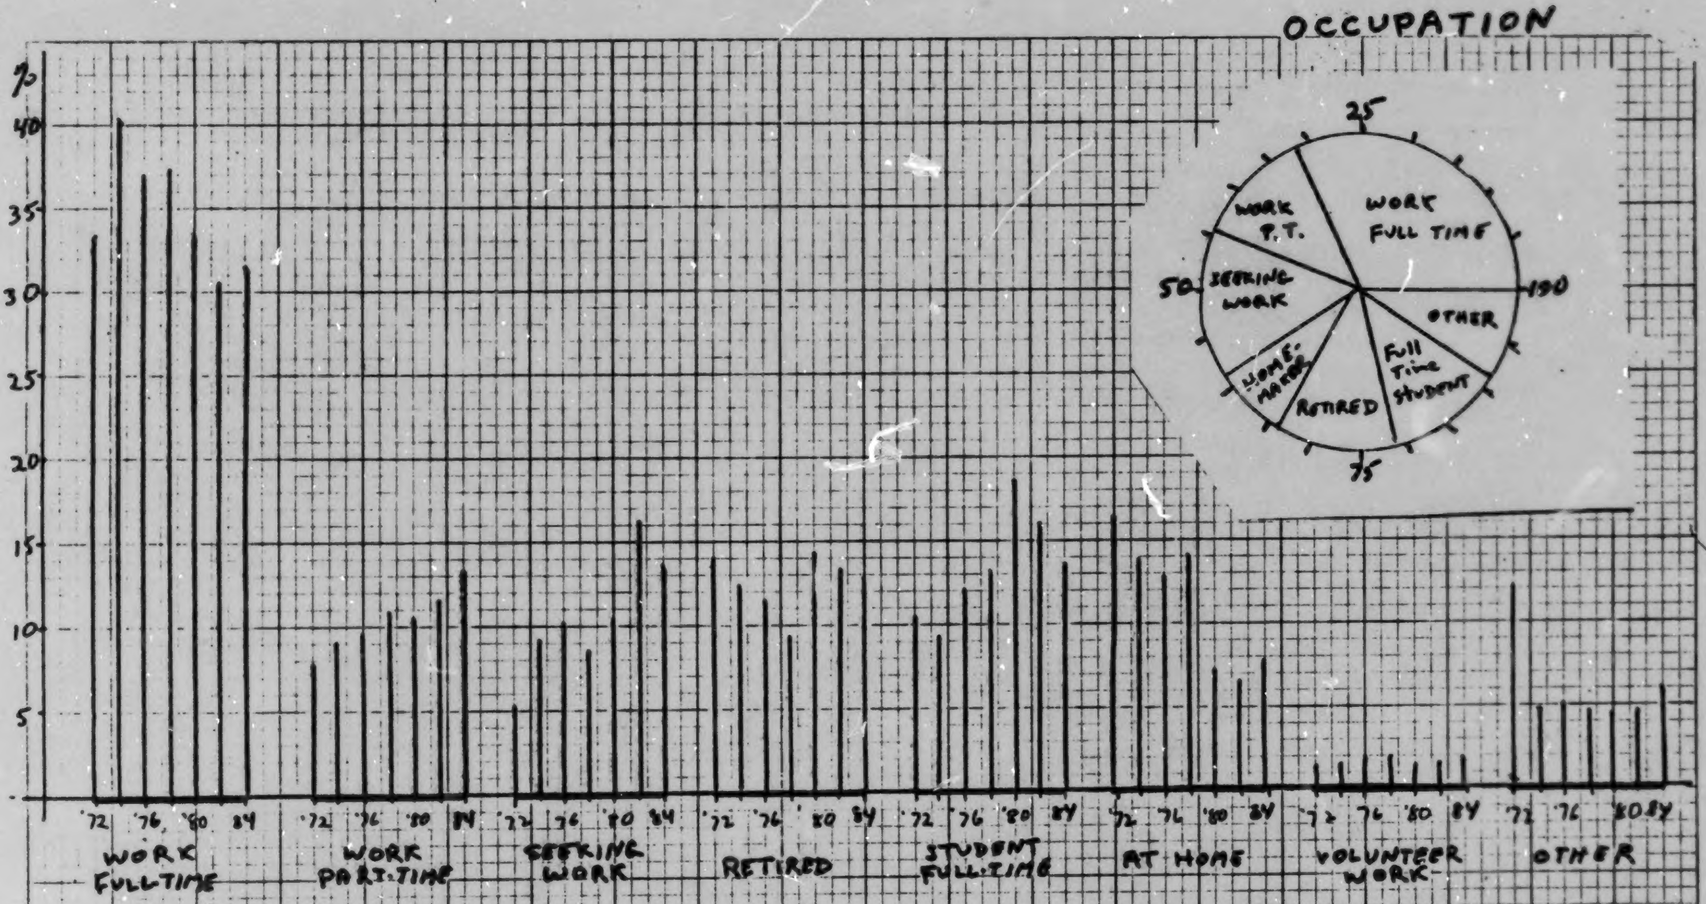
- About one in four students completed eight years of schooling or less.
- The proportion completing 15 or more years of school has been delining consistently in the last decade.
- 45% received their education outside of the United States, slightly lower than two years ago but twice the rate of the early years.
- Because of the large numbers of foreign-born persons with foreign education, one cannot surmise changes in the level of education based on years of education alone.
- Of those with some education in the U.S., 30% earned at least a Community College degree, slightly lower than the 35% in 1980 but about the same as 1974 and 1976 before the large Asian immigration.
- 80% of Alemany students and about 58% of Chinatown and Downtown Center students had a foreign education compared to 10% at John Adams.

INCOME





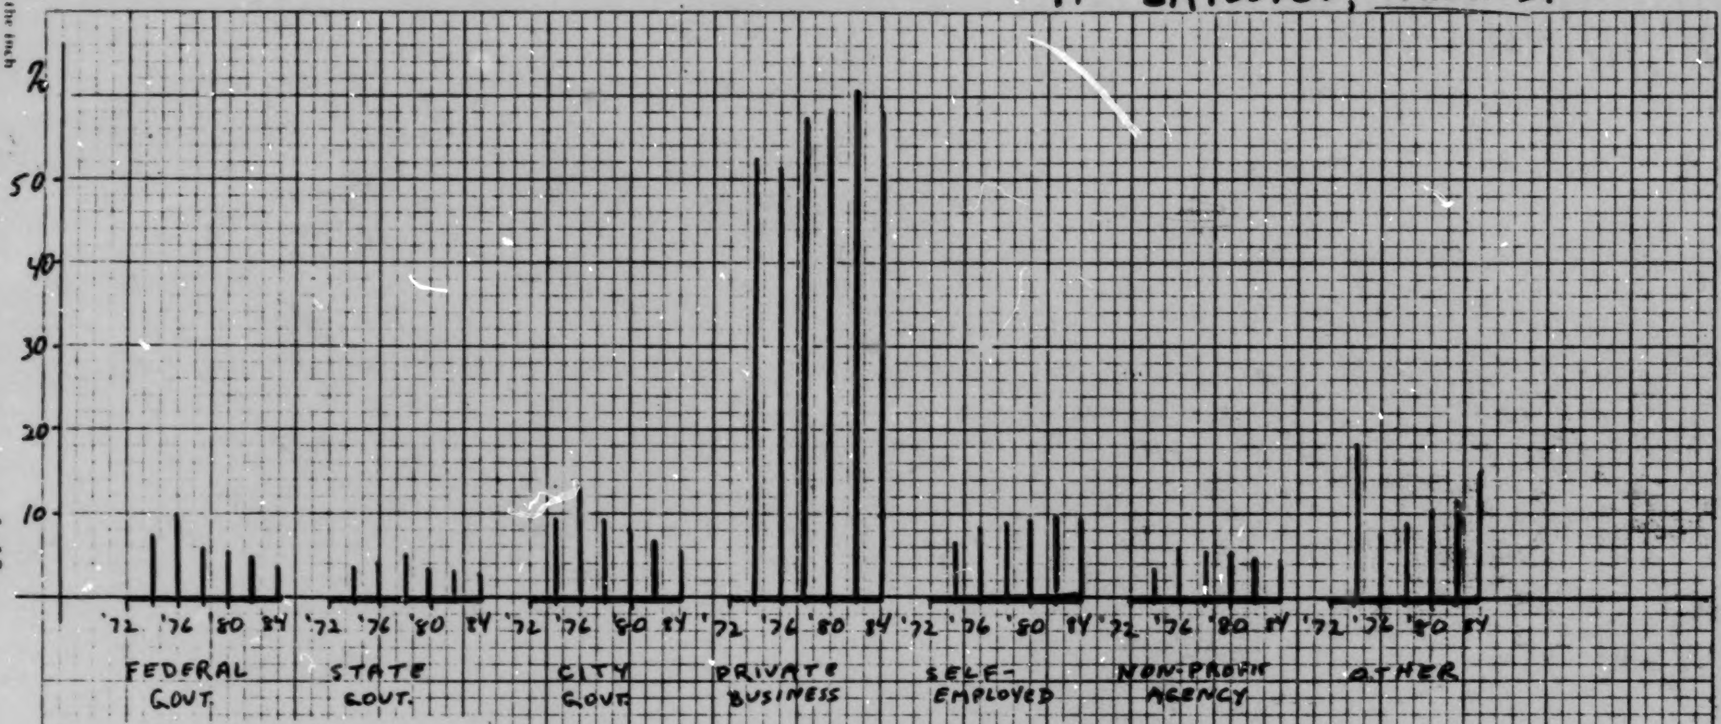
- Starting in 1980 the question requested household income rather than the income of student and spouse. Thus it may be expected that incomes might be higher in 1980 and following years. Also inflation is not considered.
- About one in four students report household income to be less than $3,000, about the same as 1982. One in six report over $20,000 household income.
- The median income is about $8,600, that is, half the students are in households with incomes above and half below that number. Two years ago it was about $8,300. The increase is less than the inflationary increase and thus on average, real household incomes are lower.
- The median income varies from Center to Center ranging from $6,300 at the Skills Center to about $13,600 at John Adams, a smaller range than two years ago.

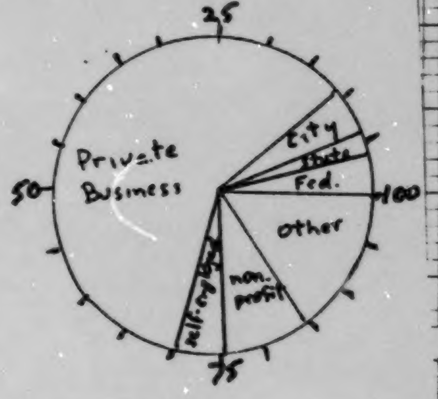


- About 31% of the students are working full time, about the same as last year but lower than a decade ago.
- The proportion of students seeking employment has decreased slightly form its highest level, now 14%.
- The same proportion of full time students continues down from its 1980 high.
- About 20% have no major occupation outside the home, being either retired or homemakers, about the same as 1982.

10 Squares to the Inch

IF EMPLOYED, THEN BY

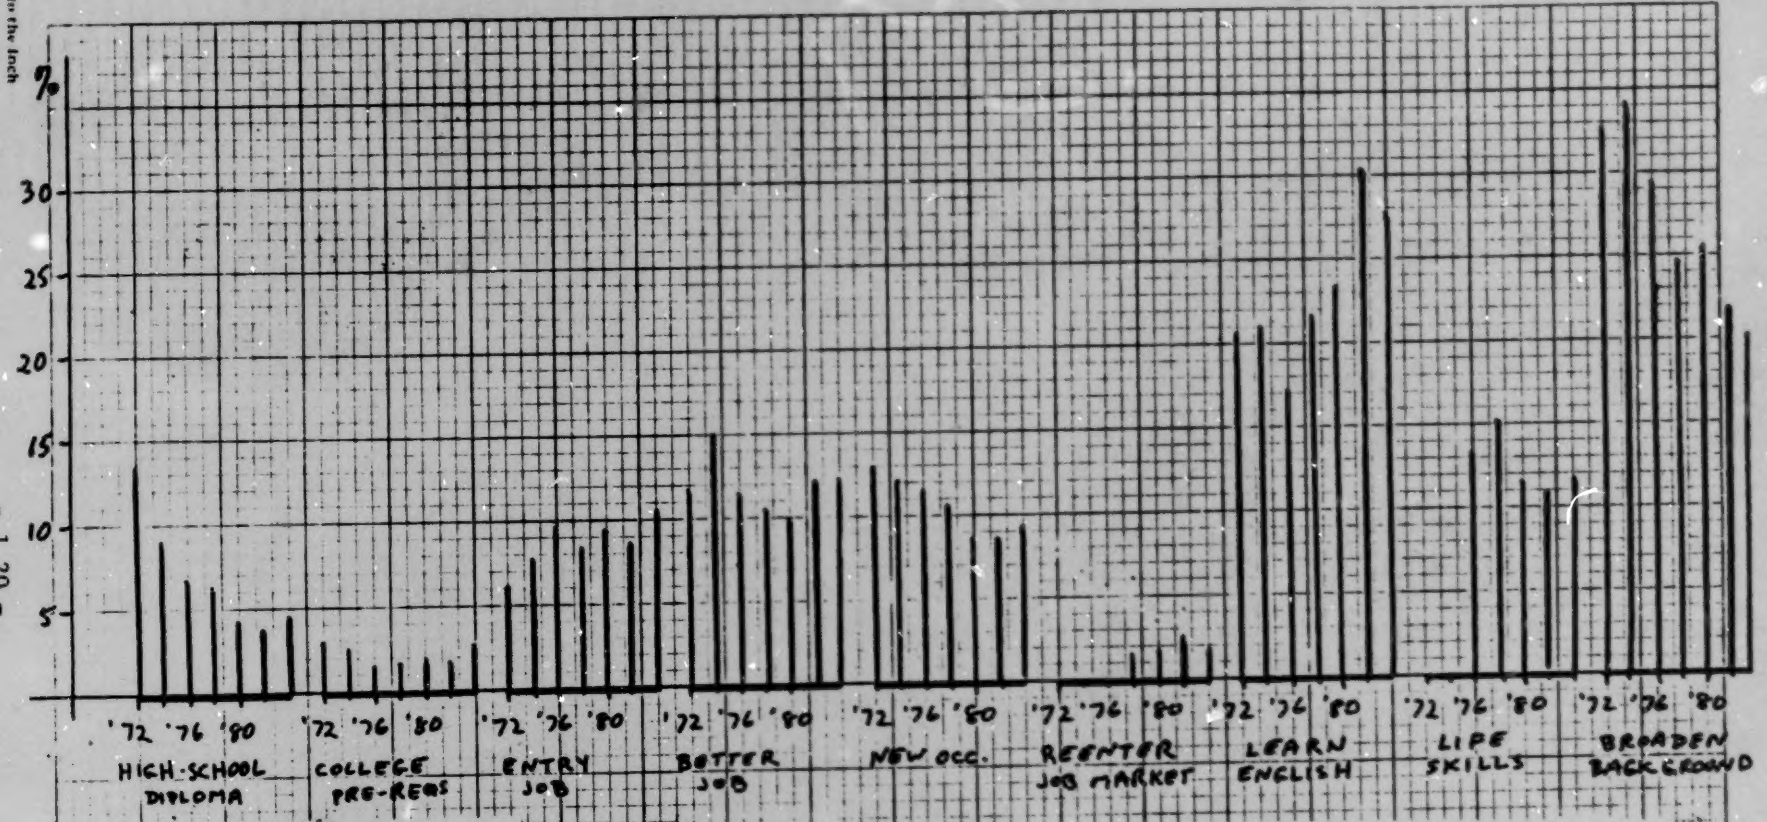


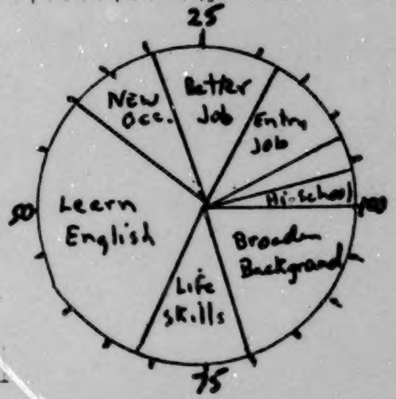


- About 59% of the employed students work for private business, a fairly constant level since 1978.
- The proportion in the public sector has continued to decrease to 12% from its high of 27% in 1976. This may be served now by the Contract Education courses, not included in the S.I.Q.
- Self-employment remains at about 10% of all employment.
- The "Other" unclassified category has been consistently increasing in the last decade, perhaps signifying untraditional employment areas.

10 Squares to the Inch

OBJECTIVES



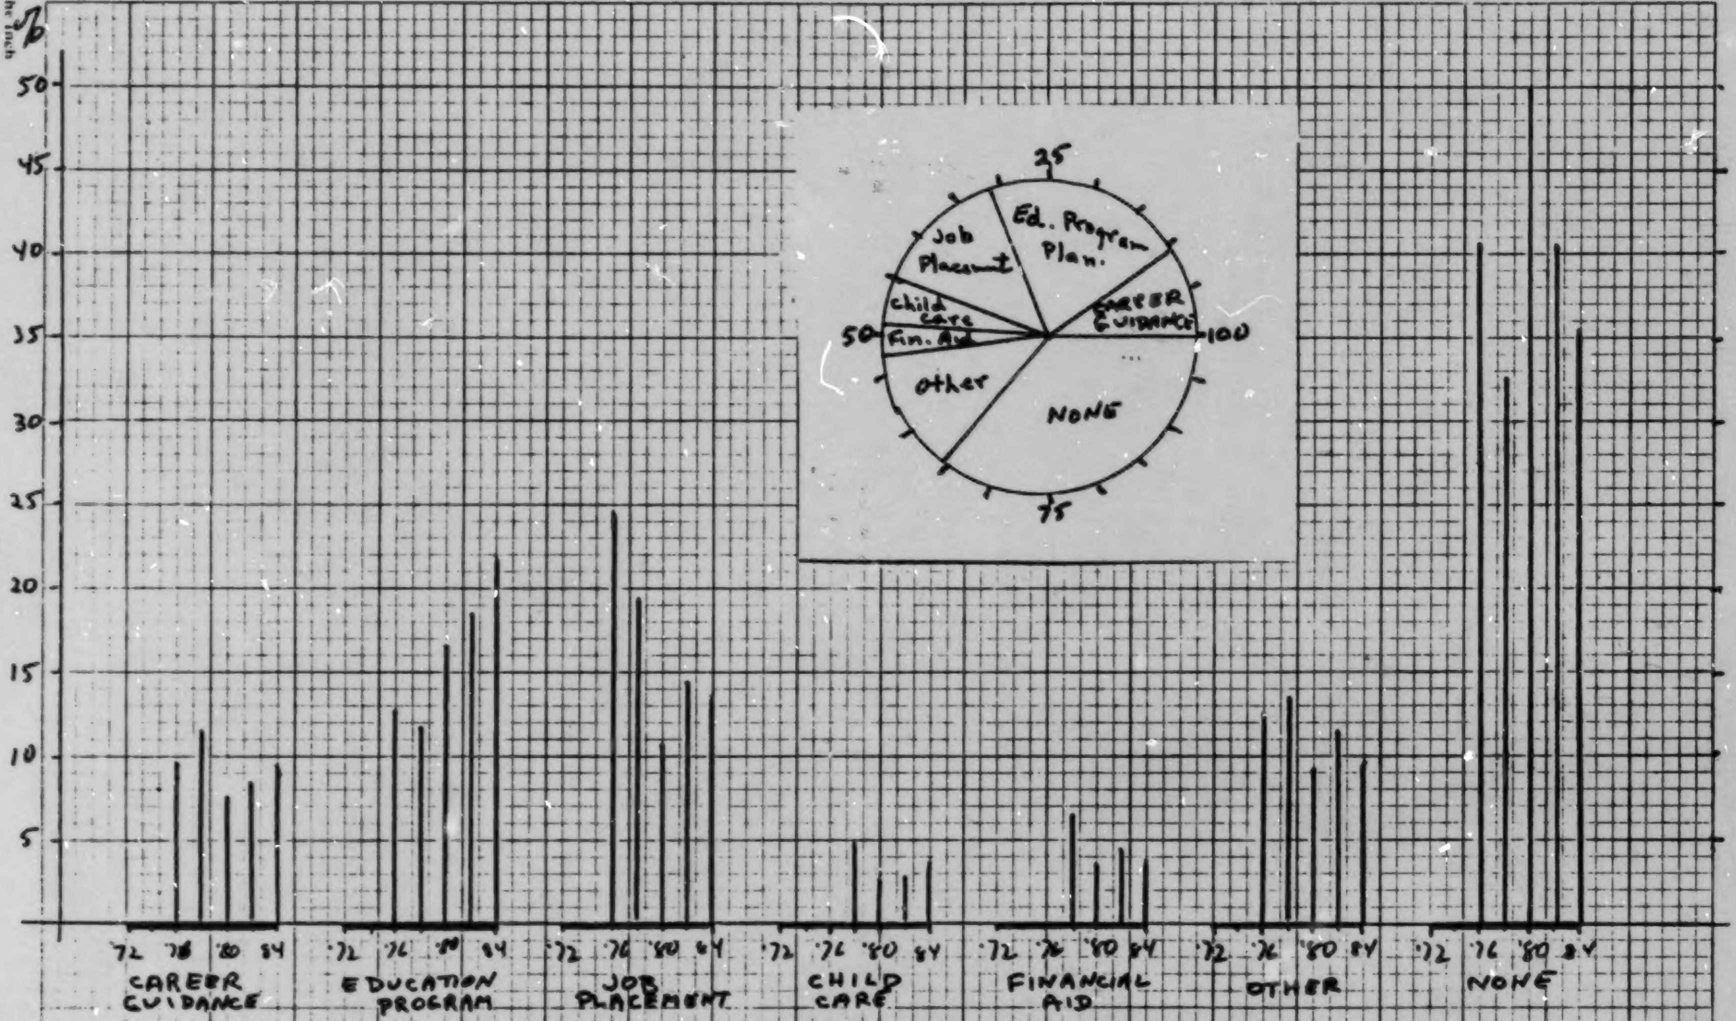


- One in three students has a direct job-related goal, not much different from 1980. A larger proportion are seeking a better job rather than an entry level job.
- About 28% of the students have the primary purpose of learning English, a necessary foundation for job skills.
- About 7% are studying for their high school diploma or to complete college prerequisites, about the same as for the past four years.
- One in five students is taking classes for general improvement or to "broaden background", a continuing downward trend.

10 Squares to the Inch

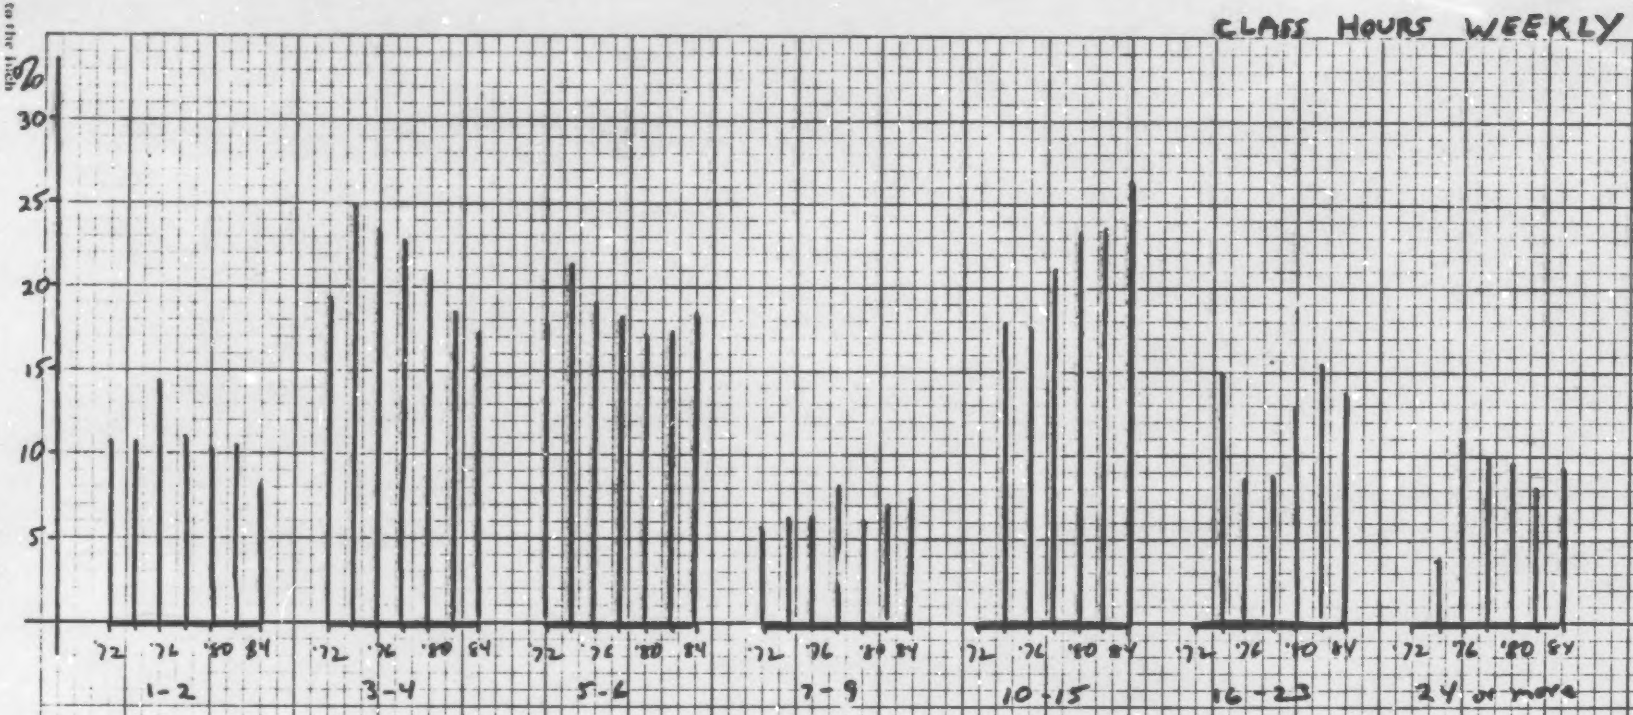
NATIONAL 12-280

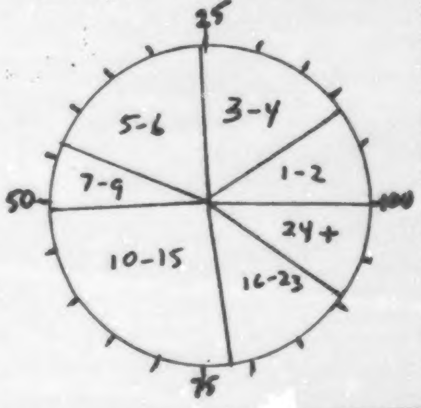
STUDENT SERVICE



- More students plan to use student services than in prior years; only 35% of students do not compared to 50% four years ago.
- An increasing group want assistance in educational programming and career guidance.
- Request for job placement assistance is down slightly from two years ago but considerably below its 1976 high.
- Only 4% of the respondents felt that student financial aid services was of greatest importance to them.

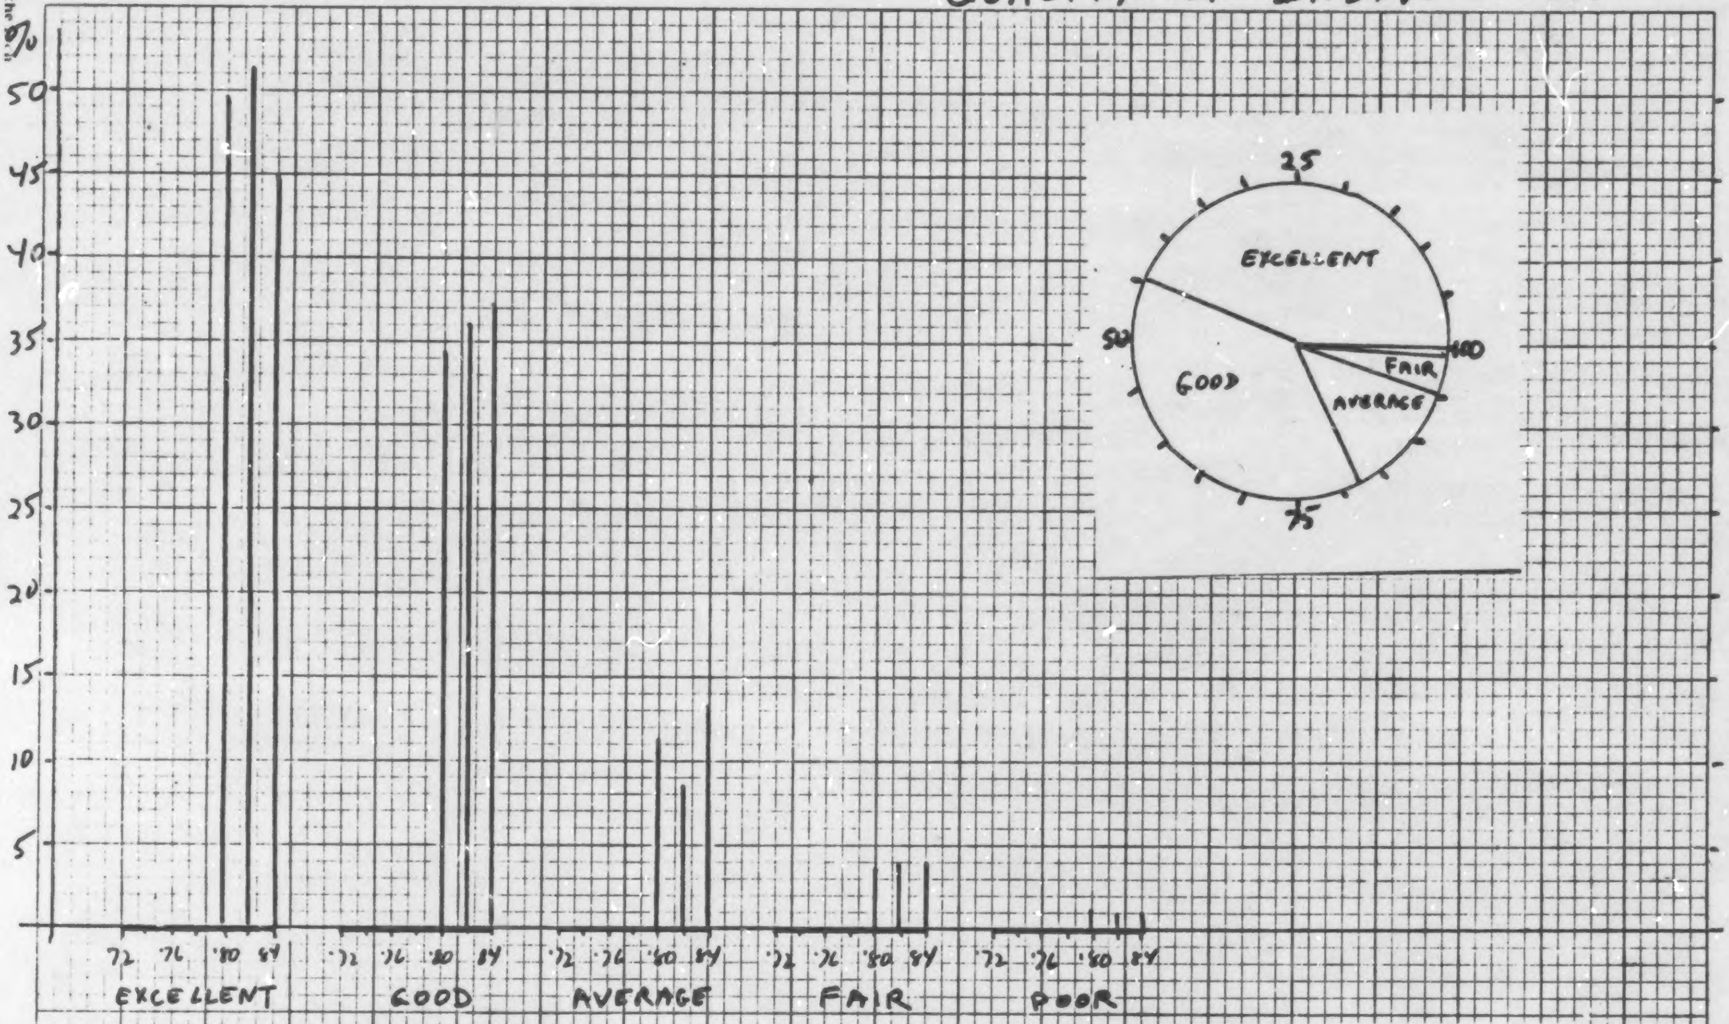
CLASS HOURS WEEKLY





- About one in twelve students attends class only 1 or 2 hours weekly; about one third attend 3-6 hours weekly and one in five attend more than 18 hours weekly.
- The proportion of students attending classes 10 hours a week and 20 hours a week has continued to increase. This could be explained by the students taking ESL, most of which courses are scheduled in ten hour blocks.
- Casual students, or those taking four or less hours per week are declining.
- At Alemany and Skills Center more than half the students are taking 12 or more class hours weekly.

QUALITY OF INSTRUCTION



- This question was initiated in 1980 as rough indicator of student satisfaction.
- One of every two students rated instruction as excellent and one in every three rated it good.
- Less than five percent felt instruction was below average, either fair or poor. It was consistent at all centers increasing to only 9.5% at one Center.
- The perception of quality may have changed slightly.

1.d
Historical Perspective
City College of San Francisco

The S.I.Q. has been held on a biennial basis since 1976 at City College, and for the most part there has been continuity of the questions and process to allow historic comparisons. Probably the most significant change in wording was in the question on income; in 1980 the request was changed to household income from student and spouse's income. However some new questions have been added.

The series of charts which follow show the pattern observed since 1976. The percentage responding to each of the possible responses is given for each S.I.Q. year; for the day division it is shown as a bar. Corresponding evening division data is shown by a cross mark in the appropriate column. The 1984 data is also presented graphically as a separate pie chart for the day and evening division. Brief comments are given on each chart. The data for each chart is given in Section 4 tables.

College students continue to change. There are fewer students 19 and younger in the day division with a small but steady increase in the 35-44 year olds. In the evening division there is also an increasing trend upwards in the 35-44 year olds but the 45-54 year olds decline and an increase in 55 and older suggesting mid-career changes in 35-44 and leisure time for study after 55.

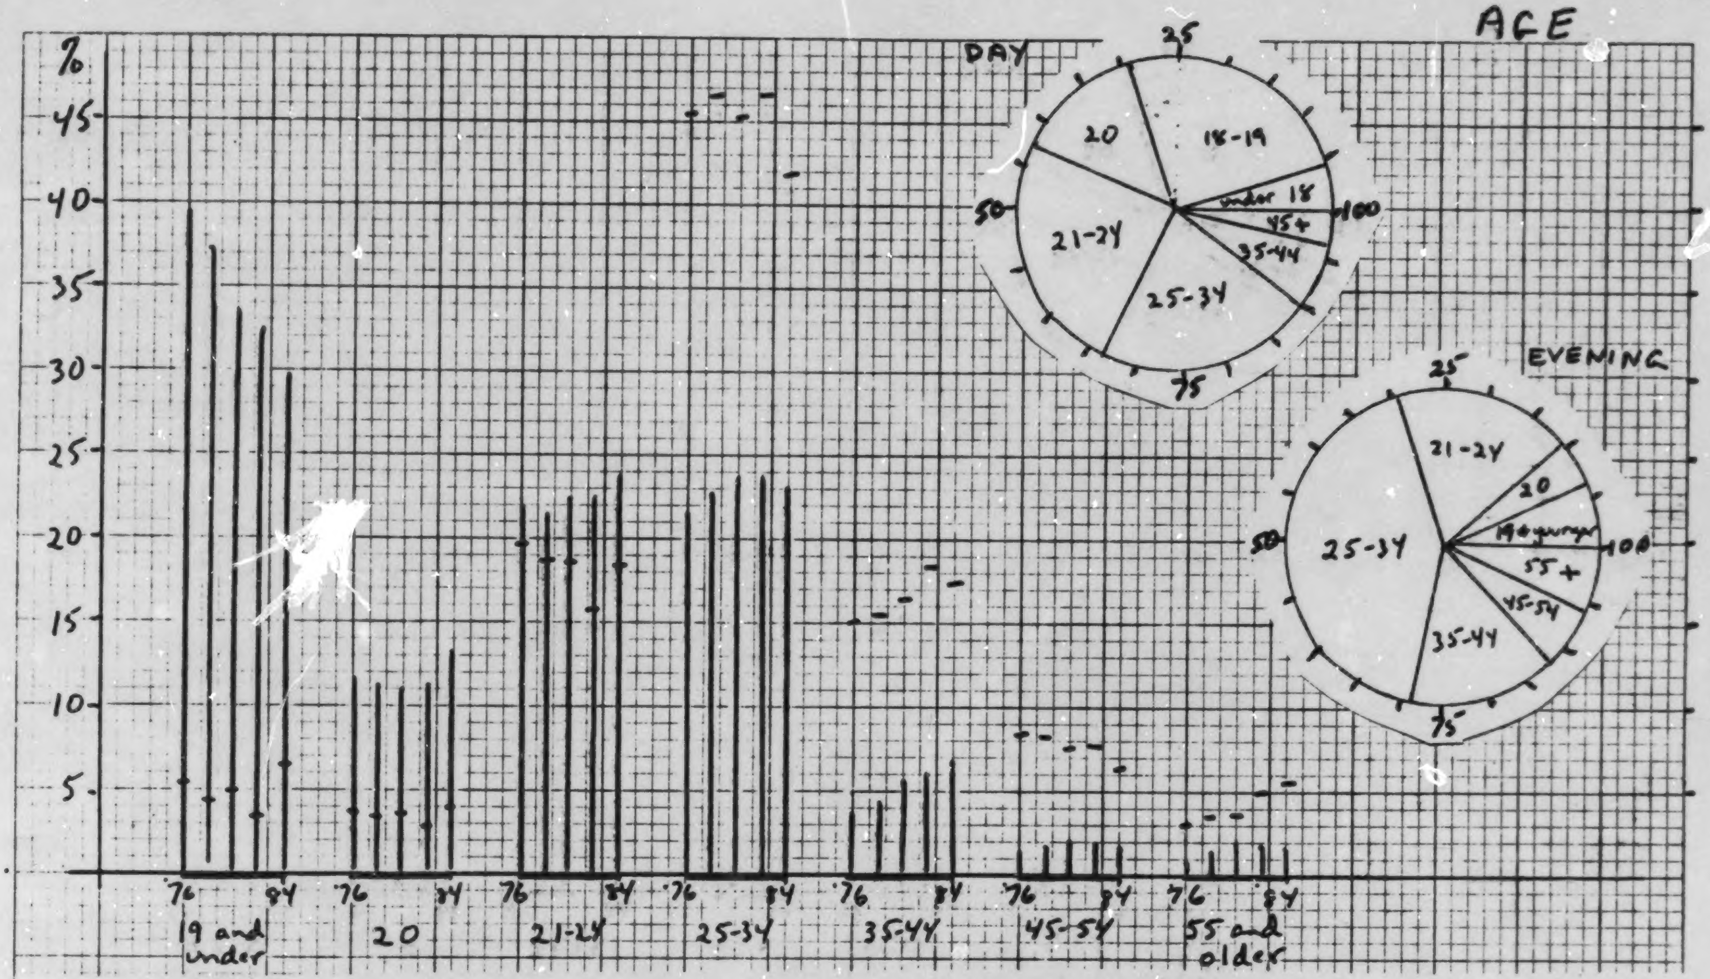
In both day and evening, there has been a large and consistent decrease in the proportion of White students. There has not been a consistent change either up or down for the Hispanic, Black or Chinese student groups in the day although the proportion of Blacks in the evening is decreasing and steadily increasing for the Chinese students.

An increasing proportion of day and evening students report that transferring to a four year institution is their goal. This taken together with the younger age may indicate a change in what had been considered the traditional community college student. Concomitant with the increase in transfer goals, is the apparent decline in students with immediate occupational goals.

There seems to be a decline in both day and evening students in the proportion who chose City College because of lower fees and tuition and because of its special programs. In the last six years there has been a large and steady increase in those who select CCSF for undefined reasons. In the next S.I.Q. an attempt should be made to define what is included in "other".

Day students seem more likely to work full-time or be full-time students with a concomitant decline in those working part-time. Evening students are now less likely to be working full-time. This may result from the fact more day students apparently are also taking courses in the evening division.

The following series of charts present a good overview of City College students. The data for these charts is presented in tables in Section 4.

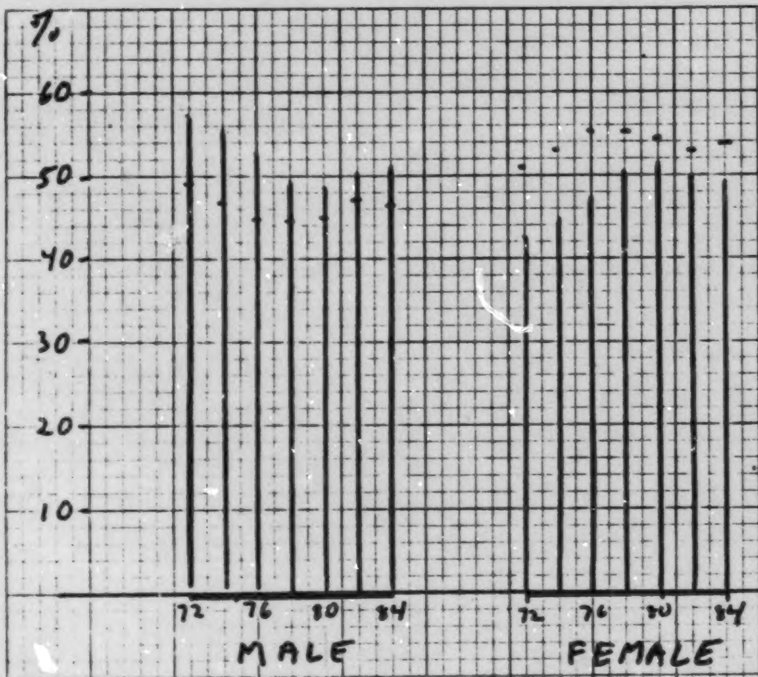


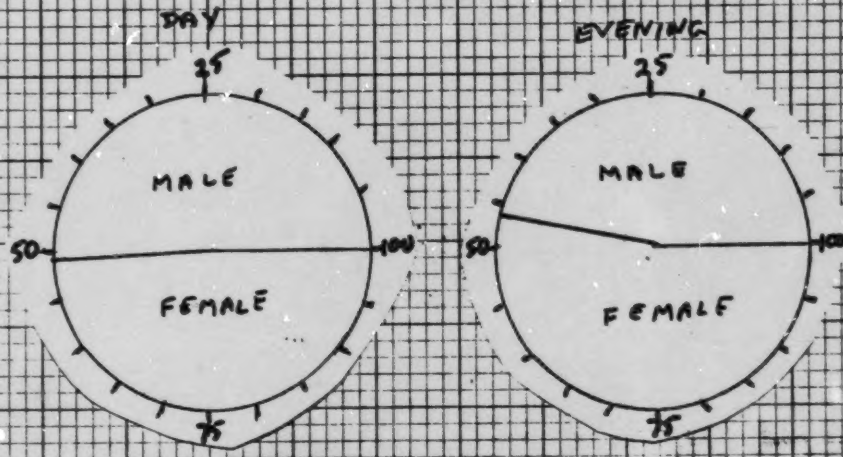
- Those students 19 and younger, although still the largest age group in day division declined steadily in the last decade.
- That decline was offset by a rise in the last 4-6 years of 20-24 year olds but the largest percentage increase was in the 35-44 year old cohort.
- In evening division, the 25-34 year age cohort is largest; a decrease in 1984 was offset by increase in younger students.
- The 35-44 year olds are an increasingly important segment in both day and evening.
- Those 45-54 year olds in evening division have been declining but the increase in 55 and older offset that decline.

10 Squares to the Inch

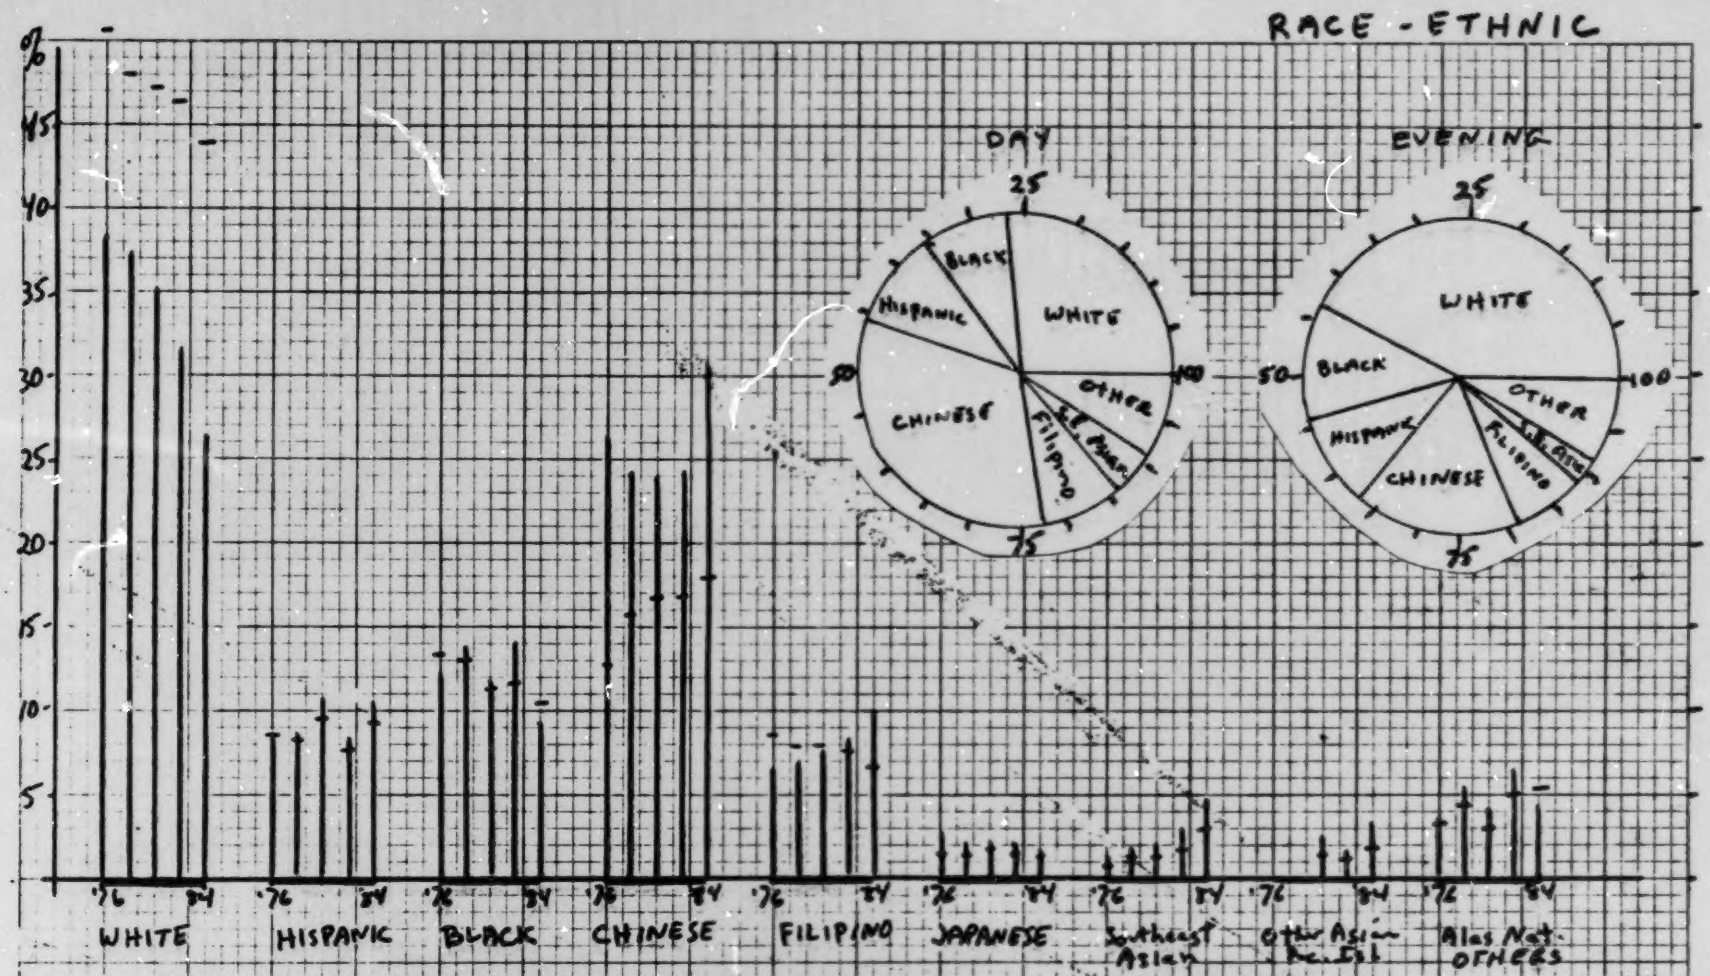
NATIONAL 12-280

SEX





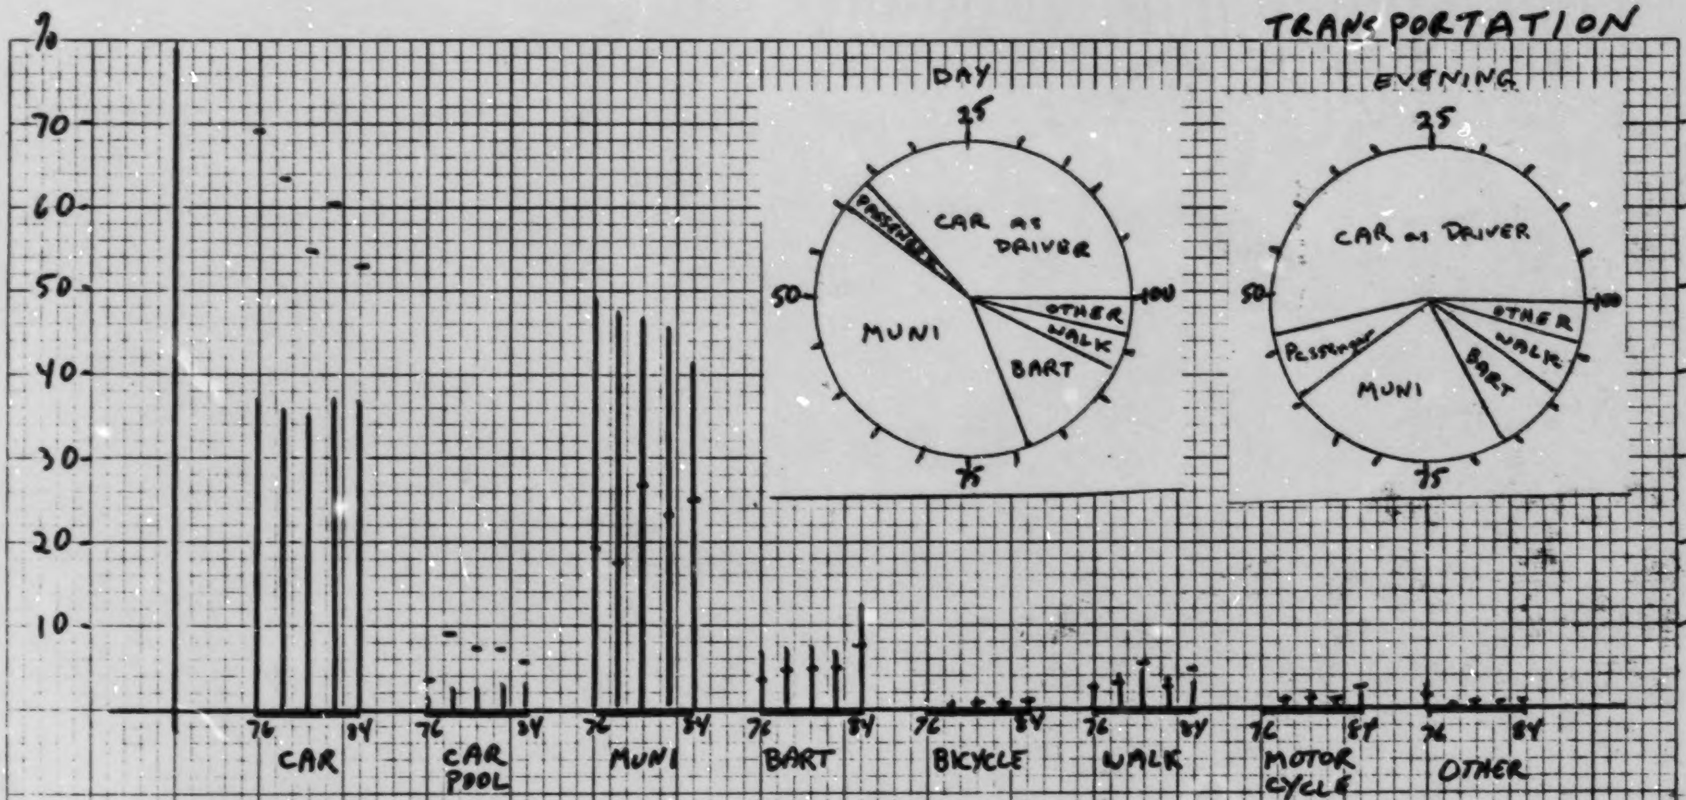
- Male students make up a majority in the day but not in the evening division.
- The proportion of women students increased through 1980 with slight decline since then. It appears that an equilibrium has been reached with an even split in day but women outnumber men in the evening division.



- The proportion of white students has steadily decreased in both day and evening such that three of four day students are minorities as are more than one of two evening students.
- Within the Hispanic and black groups no strong trend is demonstrated.
- It appears that blacks in evening division are a declining segment; although the proportion of blacks decreased at a great rate in 1984 it is not yet clearly a trend.
- The proportion of Chinese in day have increased dramatically from 1982 to 1984; in the evening there was a steady upward trend. Southeast Asians also demonstrated a consistent upward trend in both day and evening.
- Filipino day students increased steadily but evening students showed a slight but consistent decline.

10 Squares to the Inch

NATIONAL 12-280



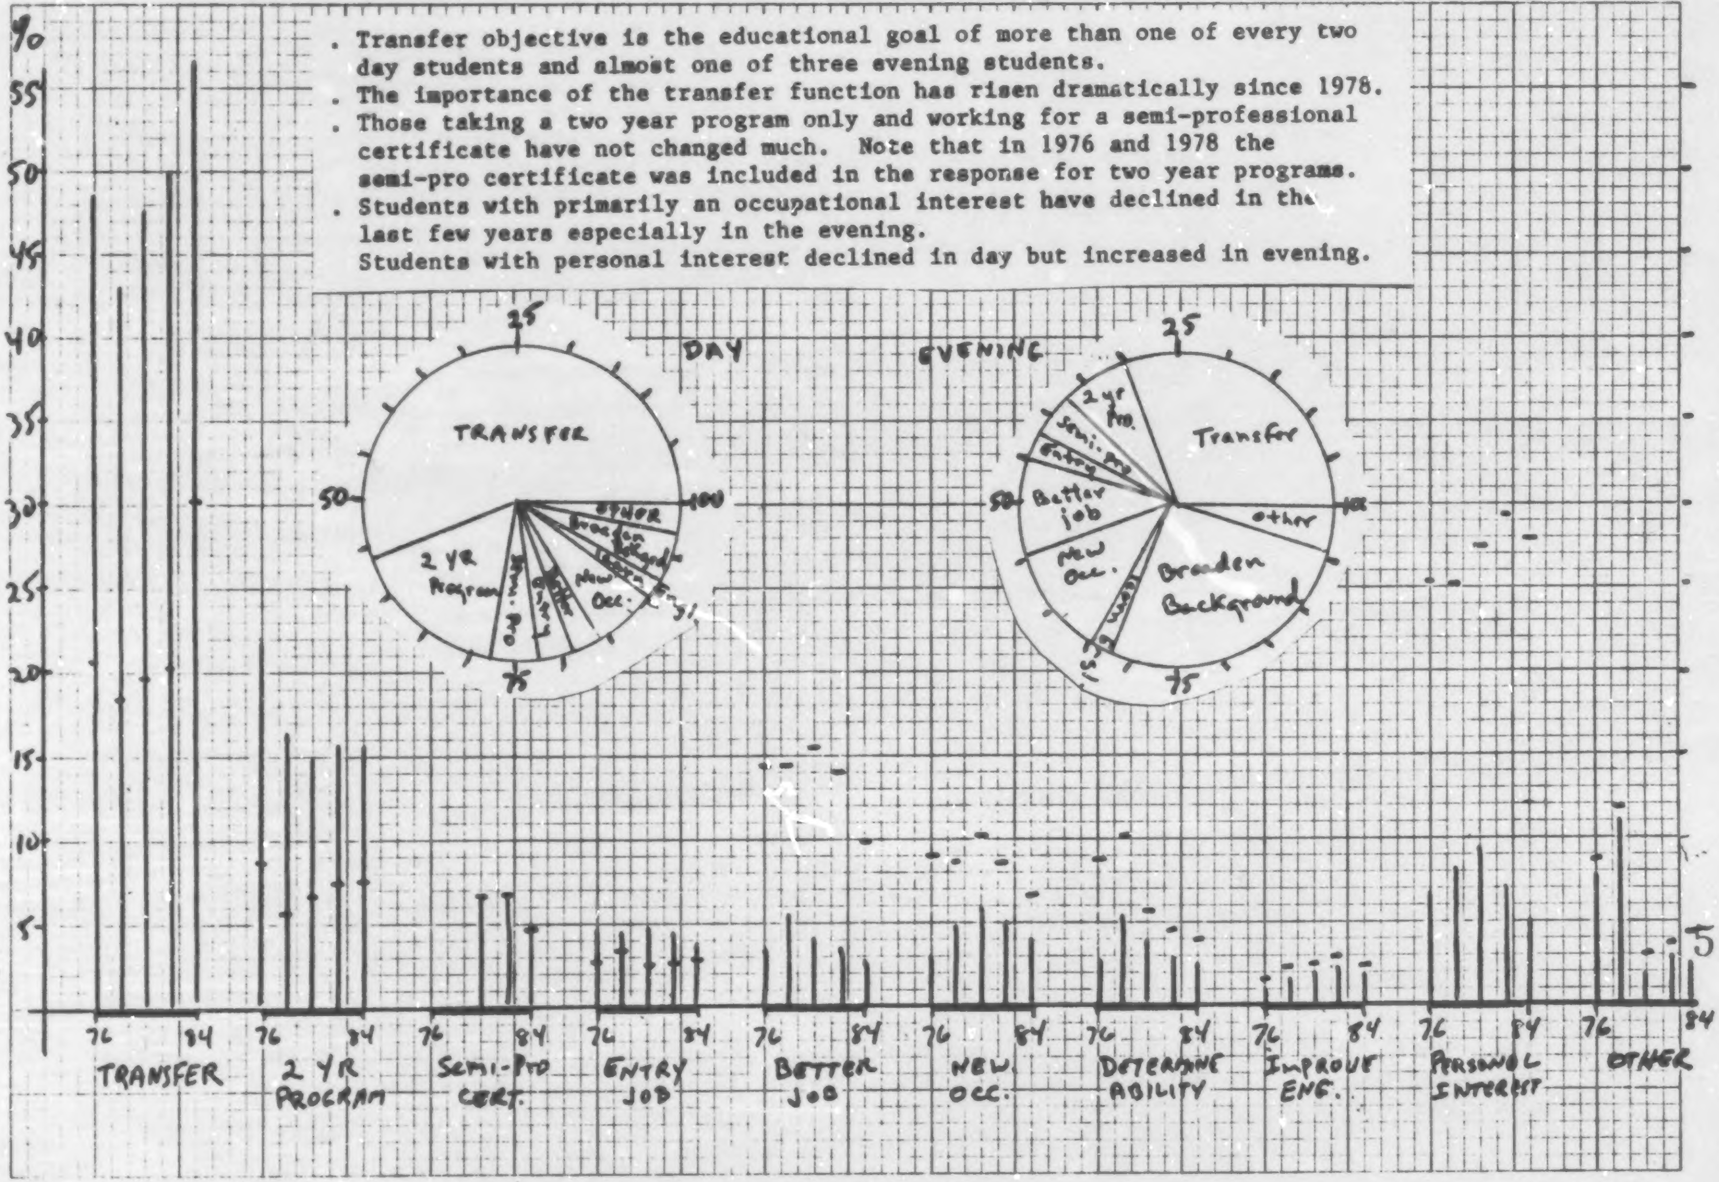
- For day students there has been relatively little change in their method of transportation other than a shift from MUNI to BART.
- In the evening division there is noticeably less reliance on the automobile.
- In 1984 more than one of every two students used public transportation as the primary method as did one of three evening students.

10 Squares to the Inch
NATIONAL 12-280

EDUCATIONAL GOALS

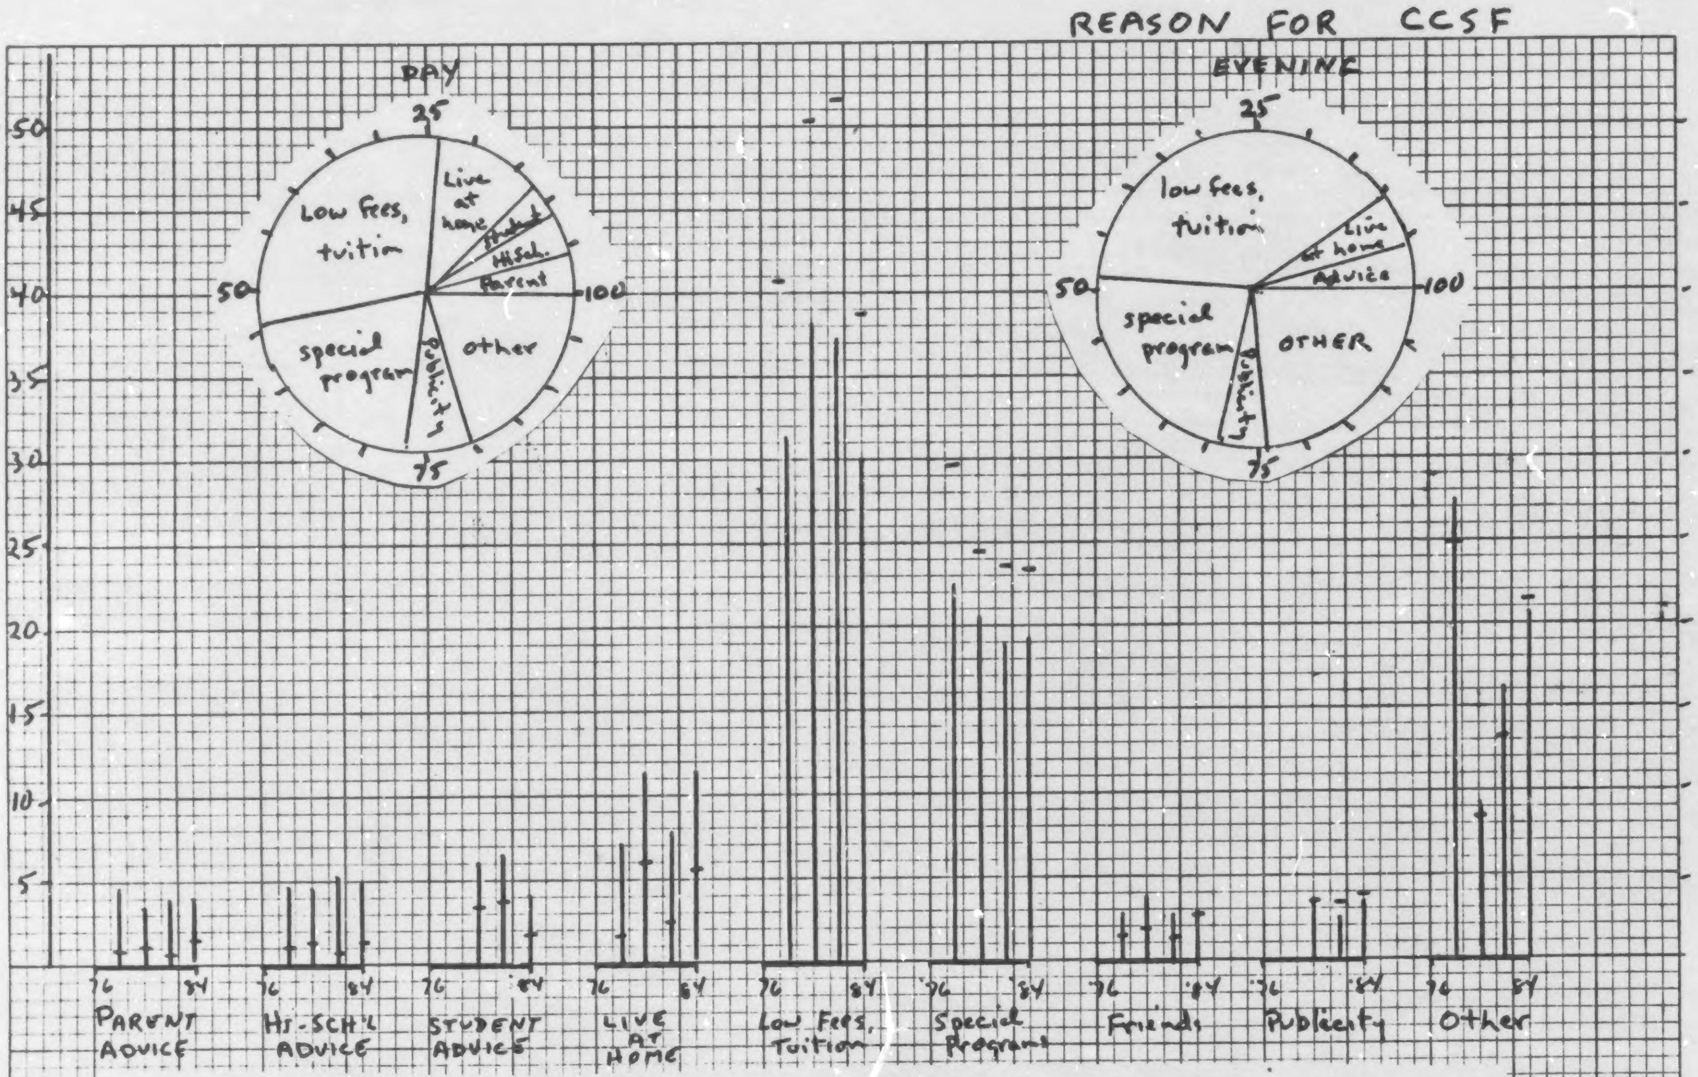
- Transfer objective is the educational goal of more than one of every two day students and almost one of three evening students.
- The importance of the transfer function has risen dramatically since 1978.
- Those taking a two year program only and working for a semi-professional certificate have not changed much. Note that in 1976 and 1978 the semi-pro certificate was included in the response for two year programs.
- Students with primarily an occupational interest have declined in the last few years especially in the evening.

Students with personal interest declined in day but increased in evening.



- 1.30 -

10 Squares to the Inch

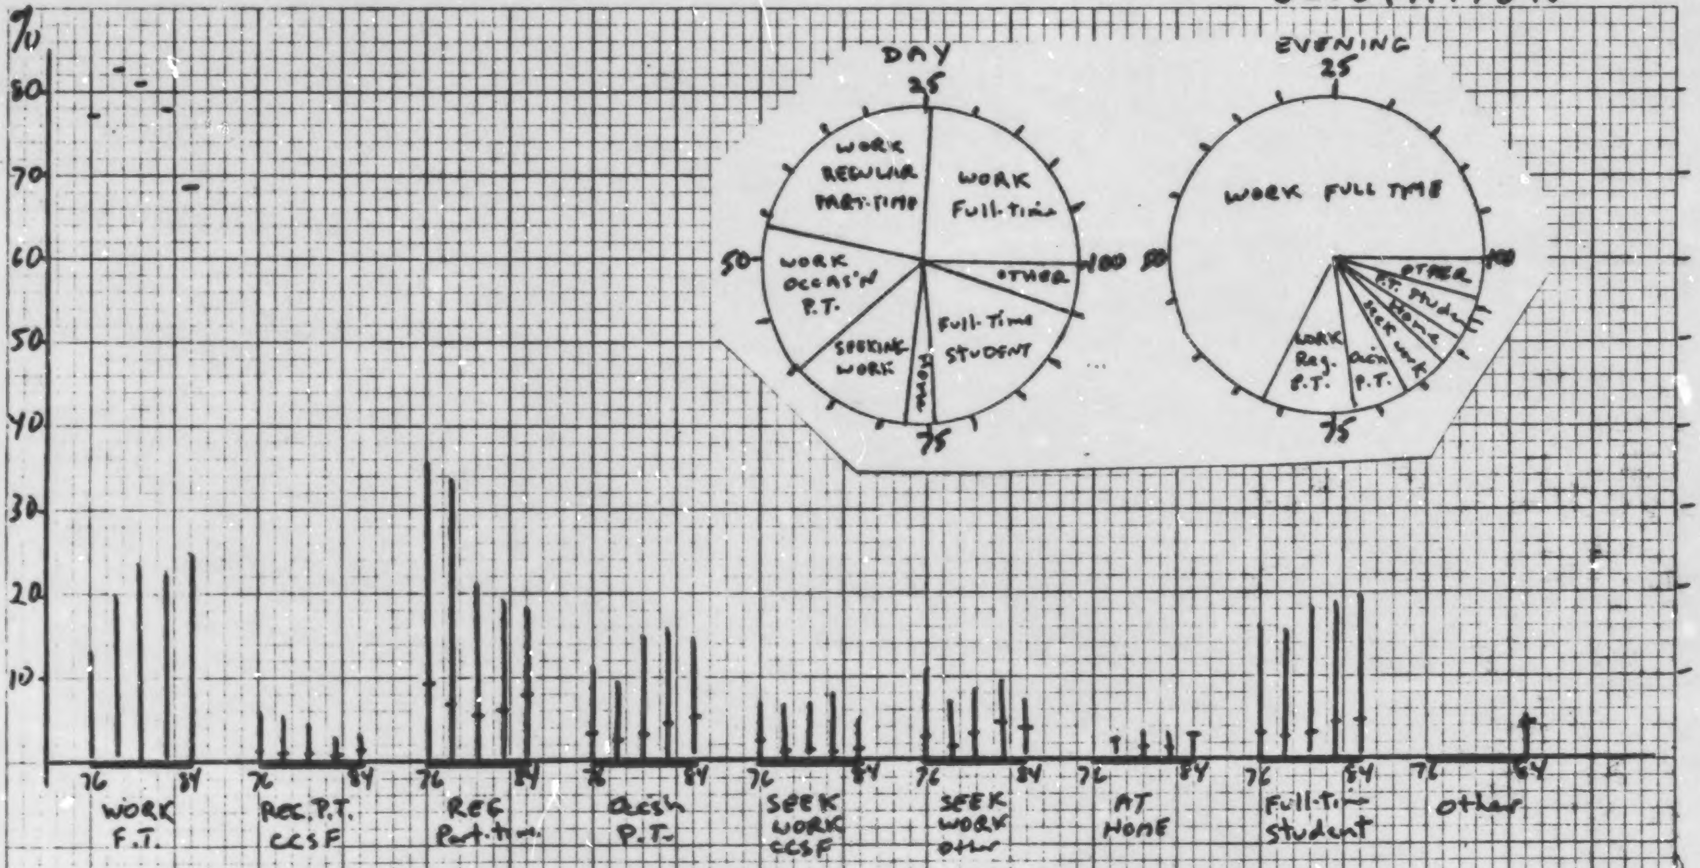


- Lower fees or tuition has been the dominant reason to select CCSF for both day and evening students. However there has been a large drop from 1982 to 1984 in these proportions.
- The increase in proportion of those selecting CCSF because they can live at home, may in part offset the importance of low fees; both are economic reasons.
- Special programs offered by CCSF have become a steadily less important reason for selecting CCSF.

10 Squares to the Inch

NATIONAL 12-290

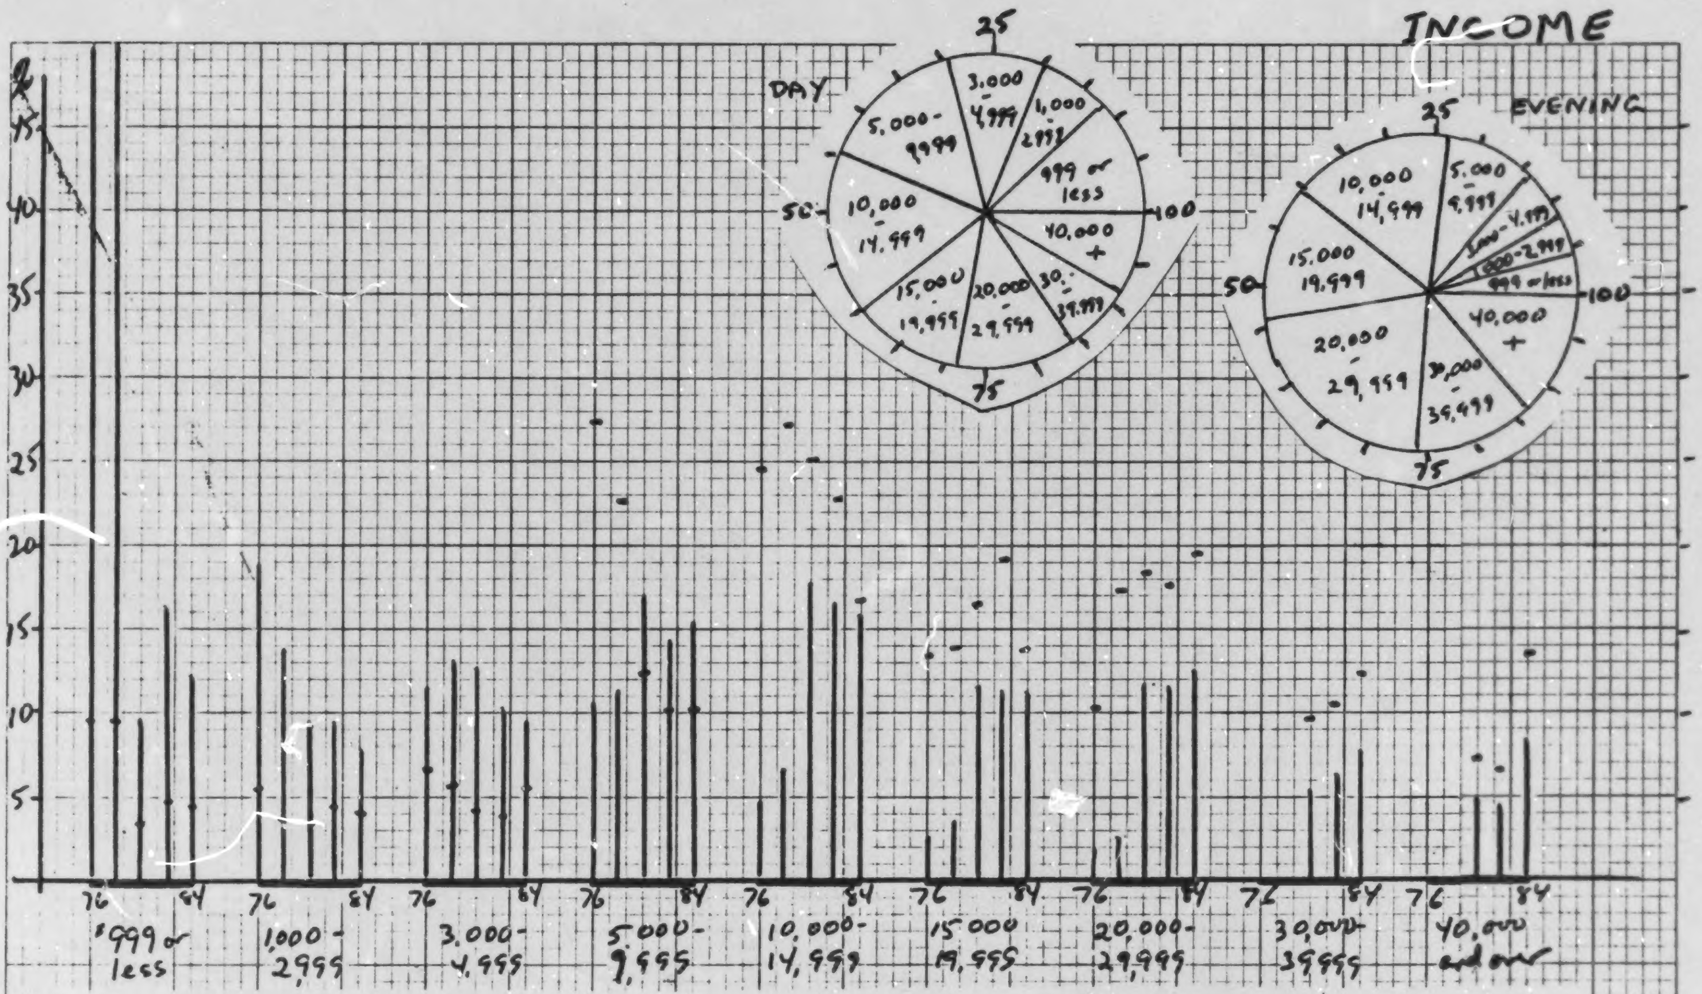
OCCUPATION



- About 25% of day students have full-time jobs compared to only 20% who are full-time students.
- Some 68% of evening students have full-time jobs. About 5% are full-time students; they may be taking day as well as evening courses.
- An increasing proportion of day students is working full-time compared to a decreasing portion of evening students.
- Part-time work seems to be less important now to day students and a smaller proportion is seeking work than two years ago.
- In evening division a small but increasing group work part-time, offsetting the full-time decline.

10 Squares to the Inch

INCOME



- Starting in 1980 the question requested household income rather than the income of student and spouse and thus 1976 and 1978 can't be compared to 1980 and following.
- The data has not been adjusted for inflation and thus the real income is increasingly lower than shown.
- Some 45% of current day students report a household income of less than $10,000 and dependent upon number of people in household this is below poverty level.
- There has been increase in both day and evening of those student with household incomes over $20,000, roughly the San Francisco median income.

1.e
Summary and Implications

The S.I.Q. is a valuable resource just as useful to search out answers to specific questions as to describe the typical SFCCD student. The purpose of this volume is both to high-light some of the facts about our students and to serve as a reference document. Thus the narrative is very subjective and incomplete. Much like the United States Census, study, news reports and analyses are continually being issued to reflect specific interests. It is to be expected that memoranda will be released on different facets of the 1984 S.I.Q. until the completion of the 1986 study.

However in reviewing the limited facts presented in this volume, one cannot help raise questions about the significance of these facts for the future development of the San Francisco Community College District. This section summarizes some of the facts contained throughout and raises implications which should have impact on our programs, services and plans to meet the educational challenges. It also may suggest areas where additional study is required. The reader will want to add to this list.

Centers

.. There is a decline in new students, those we never served before. Therefore we must serve them well to keep them as students as we cannot routinely rely on new students to replace them. The converse fact that there is an increase in continuing and returning students indicates that we are meeting their needs and must continue to be alert to student needs.

.. However ESL students are more likely to be continuing than other students. This places added emphasis on the retention of our non-ESL students; do we need to develop more comprehensive programs or relationships between courses to provide well-rounded educational opportunities for adults who do not require/desire degrees?

.. The pattern of persistence varies among programs offered. Although one in five students has never attended a Centers class before this semester, only one in ten students enrolled in senior programs is new this semester; almost all are continuing students with small numbers returning after an absence of a year or two. At the other end of the spectrum are those in the high school and G.E.D. programs where about two of every five are new students, and more than one in five is returning after an absence of a year or more. This suggests looking into ways to help students in the high school program achieve their objective and encourage their return whatever the reason for stopping out.

.. There is greater demand for student services than in prior years increasing from 50% to 65% in four years but still below the 1976 figure. Is the availability of counselling services well known to the students and does the availability fluctuate as much as the apparent demand?

.. Educational program planning was selected more frequently than job placement services as the most desired student service suggesting that students are seeking longer term educational activities rather than immediate short term job skills. Are we moving in that direction?

.. The proportion of classes meeting in the morning is increasing. Is this a result of class/teacher scheduling or student demand? Decreasing classes in the afternoon decreases option for those seeking afternoon classes. Will job-sharing and other employment patterns release more students for afternoon classes? What consequences are there to changing patterns of facility usage?

.. The large increase in minority enrollment is continuing at a faster rate than in the San Francisco population. However the pattern changes from ethnic group to ethnic group. Can we meet the needs of these changing groups as they advance beyond ABE and ESL programs? How do we define those needs?

.. A larger proportion of students in advanced ESL programs than in beginning ESL are students new to the Centers. This may reflect the remediation policy at City College and other schools. Centers students who selected the goal of college transfer are more likely to be in ESL programs than other disciplines. It may also explain the current increase in ESL students. However it also suggests that there could be improved progression of ESL students from beginning level on through to the more advanced.

.. There are approximately twice as many students in ESL programs as those who have the primary objective of learning English. Thus one ought to consider that large segments of our ESL students attend for occupational purposes, and ESL should be emphasized as first step only. Do ESL students continue either at the Centers or City College after they have attained a satisfactory level of accomplishment in English?

.. Almost one in ten students whose primary goal is to learn English are not in ESL classes. About half of them are in occupational preparatory classes which may meet complementary needs. Another large group are in general education courses, possibly to increase their fluency beyond ESL courses or beyond ABE courses.

.. Considerable improvement can be made in affirmative action towards attracting apprenticeship students both as regards to sex and ethnicity. This is particularly significant because of the very high median income of this group of students, more than twice as high as all students.

.. Blacks are a high percentage of those in the high-school program but then they apparently leave the Centers. The proportion of Blacks in the 25-59 year old range is lower than might be expected. Do they leave for other educational institutions or are they no longer in the educational system? Do they have a specific need we should be meeting?

.. It appears that Hispanic students are non-continuing students at a higher rate than other students. Is there an explanation? Might changes in counselling or clarification of objectives be beneficial?

.. The fact that 35% of the gay men/lesbian students compared to 21% of the total student body are new students this semester might demonstrate the effectiveness of special outreach effort.

.. In the Marina area of the city, the household income of students is higher than of the resident population; in the North Beach area, student income is one half of the population median income. This variation is probably a function of programs offered.

.. Some 15% of the students reported household incomes of less than $1,000. It is probable that these people benefit from social programs. Are their educational need different and adequately met so that they can move up from that level?

.. Although the median household income has increased 14% in four years, this rate is less than the rate of inflation. Therefore are students on the average less able to pay towards the expenses of instruction?

.. The younger students do not rate instructional quality as high as older students, nor do the Chinese when compared to other ethnic groups. Does that result from a value system which is a function of age or ethnicity or is it related to programs that these groups might take?

.. Students who may be considered to be in the high career change years of mid-life, 25-54, are most likely to return after stopping out for two or more years, but the stop-out students only account for 11% of all students. Should we be encouraging persons to return for general education as well as specific career education?

.. There was a decrease in the proportion of students attending to "broaden their background". This may result both from the imposition of fees on classes now designated as community services and the reduction in the number of such classes offered. The increase in ESL students would act to decrease the proportion of other students.

.. Advertising and publicity are not as effective as word-of-mouth to draw people into classes. However its value should not be underestimated as it may be the factor which encourages potential students to question their friends or staff at the Centers.

65

College

.. Fewer students at City College select CCSF because of its lower fees/tuition now than they have in the past, both in day and evening divisions. A possible explanation is that those for whom fees were most significant could no longer afford to attend, and as consequence they dropped out of the study body (and the S.I.Q.).

.. However there is a difference in the relative importance of the lower fees by ethnic groups. But it appears to be more related to income level in a way opposite to what might be expected. The higher the income level, the more important is a low fee. The low fees are also least important for new students. This would confirm that fees are not important for the "traditional student" who is present at City College and thus able to afford them.

.. A smaller proportion select CCSF because of its special programs. Does this imply competition with the private technical schools or perhaps availability of remediation in the CSU system?

.. A larger proportion of minority students than Whites at City College list the objective of transferring to a four year college or university with special emphasis on San Francisco State. Are the articulation programs helping all minorities to meet that objective?

.. Although about half of City College students consider themselves to be transfer students, their relative ADA weight is greater. In the day division, the median is 13 units a semester compared to 10.8 for all other students. In evening division classes, where transfer students are 30% of the student body, they take on the average of 7 units compared to 3 units for non-transfer students.

.. A larger proportion of students claim to have transfer goals than do in fact transfer. What can be done to help student set realistic goals and then achieve them?

.. At City College we estimate 6,380 students attending who reported that they have completed no units at City College. On the other hand, there were 5,450 students who had not attended City College before this semester. This implies that perhaps 900 students or 4% of the student body had either withdrawn or failed a prior class but were coming back to try again. These students spread across all educational goals. Although the numbers are small and therefore not as reliable, the greatest spread is among Alaskan Natives/American Indians where the spread was 9 percentage points in day division. For Blacks it was six points, four points for Whites and lesser for other ethnic groups. The difference does not seem to be concentrated in any age groups and therefore suggests a more general policy to encourage "second choice" students but perhaps geared more for Blacks and American Indians.

.. Whites selected City College because of the lower fees at a much higher rate than did minorities, especially Blacks and Hispanics. This does not mean that fees were of no significance to these groups as evidenced by income level and expressed need for financial services. Rather it may suggest that those for whom fees would be a significant deterrent did not come to City College. It also may imply that minorities either felt they had fewer options for attending other institutions or that City College offered even more significant attractions. For example 15% of Blacks listed the opportunity to live at home as their reason for selecting City College compared to 7% of the Whites; that is a more significant economic factor than the $50 fee.

.. A similar pattern existed in 1982 but for Whites and minorities both, the percentage choosing "no tuition" in 1982 was higher than the "lower fees and tuition" in 1984, suggesting that the imposition of fees moves to equate educational institutions, and other factors become more important to those who are able to afford the fees. Of course one weakness of our data is that it is only about our students and we don't know about the students who did not attend because of imposition of fees.

Community College Centers

2.a
Community College Centers
Center by Center

There are significant differences in the student body of each Center both because of their unique program offerings and because of their geographic location. Within broad parameters, each Center caters to a diversified student clientele and that diversity creates challenges in education. This section shows this greater diversity both between and within each Center and emphasizes the need for consideration of each Center separately.

John Adams offers the high school programs, the handicapped and the nursing programs. John O'Connell provides the apprenticeship and technical engineering programs. Mission is responsible for the administration of the Senior Adult programs as well as ESL and occupational programs for area residents. The Downtown Center is predominantly for ESL (60%) and business programs. Alemany is almost entirely devoted to ESL. Chinatown/North Beach Center is largely ESL but it also administers the community service classes, primarily Art, for which a fee is charged. The Skills Center serves the Hunters Point area primarily with basic education and occupational programs. 31 Gough is the primary location for counselling and special programs. Because of its very special nature and its small student clientele it is not included in any of the discussions which follow. Table following shows the distribution of enrollment among the Centers.

Center	Enrollment	Percent
Alemany	5 210	16.1
John Adams	4 690	14.5
Mission	5 860	18.1
John O'Connell	3 500	10.8
Chinatown/N. Beach	6 440	19.9
Skills Center	1 200	3.7
Downtown Center	4 820	14.9
31 Gough	644	2.0
Total	32 364	100.0

Because of the nature of its programs, about 7 of 10 John O'Connnell students are men. The ratio in the technical programs is even more slanted as 30% of John O'Connell's students are seniors in Consumer Education courses and they are more likely to be women. In the other Centers, there is a marked predominance of women. At the Skills Center some 72% of the students are women. Mission, with its Senior Citizen programming and consequently high proportion of women, has 66% women and John Adams 65%.

The median age of Mission students is 41.4, the highest of all Centers but followed closely by John O'Connell with 40.6 and Chinatown with 39.5. Skills Center has the youngest student body, with a median age of 31.7. The median age at the Downtown Center, Alemany and John Adams are all very close to 32.5 years.

Although there is significant ethnic concentration at individual Centers, each ethnic group is represented to a greater or lesser degree at each Center. Certain Centers because of geography and program cater to different groups: 49% of Mission students are Hispanic; 53% of students at the Skills Center are Black; at the Chinatown/North Beach Center, 80% of the student body are Chinese; and at John O'Connell the predominant ethnic group is White accounting for 40% of the students.

About half of the students are Hispanic at the Mission Center, in the heart of the Mission District and it also serves more than half of the Hispanic students in the Division. One in four students is White. Chinese students account for 9% of its student body and Blacks, 7%. In the other Centers, Hispanics account for 10-15% of the students, except for Chinatown which serves less than one percent Hispanics.

Chinese students account for four of every five students of the Chinatown/North Beach Center and two of every five at Alemany and Downtown Center. These three centers account for 84% of the Chinese students attending the Centers.

One in every two students at the Skills Center is Black with 22% of the Division's Black student population attending there. Sixteen percent attend John O'Connell and account for 14% of its student body. At Alemany and Chinatown less than 1% of the students are Black.

White students are the largest racial/ethnic group at John Adams and John O'Connell dropping to 7% at Alemany. More than 62% of all Southeast Asian students attend Alemany with another 18% at the Downtown Center.

Native born citizenship status is closely related to number of Black and White students and ranges from less than 1% at Alemany to 58% at John O'Connell. Naturalized citizens are at Mission in greatest numbers but John O'Connell in the greatest proportion. Permanent residents correlate with Centers with largest Asian population. Southeast Asian refugees account for 17% of Alemany students and 8.0% at the Downtown Center. One of two refugees from USSR are at Alemany and two of three from Central or South America are at Mission.

Related to ethnicity and citizenship is language spoken at home. The proportion of White and Black students is almost perfectly correlated with the proportion speaking English at home which ranges from a low of 1.3% at Alemany to 80% at John Adams. About one of three Mission students speak English at home with one of two speaking Spanish. More than six times as many students speak Cantonese at home as speak Mandarin; the latter are primarily at Alemany, Chinatown and the Downtown Center. Cantonese speaking students are more widely represented at all Centers.

A diverse pattern exists as to means of getting to school. Some 41% of John O'Connell students drive to school as do 36% of Skills Center and 33% of John Adams. John O'Connell has more specialized programs which draws people from throughout the City and perhaps explains the large percentage; only 24% walk. Use of streetcar or MUNI ranges from 23% at O'Connell to 57% at Downtown Center. Almost half of Chinatown students walk to class. The next largest percent is 32% at Alemany.

The students at Alemany and Chinatown have had less education than their fellow students at other Centers and what education they have had has been largely foreign. Of the 41% of Chinatown students educated in the United States, half reported a community college degree or higher. About one in three John Adams students also report a community college degree or beyond with one in ten claiming a post graduate degree. This may correlate with the fact that 29% of John Adams students are taking courses to broaden their background, a general interest category.

Two out of three Alemany students have a primary goal of learning English as do one of two Chinatown and Downtown Center students. At John O'Connell, Chinatown, Skills Center and the Downtown Center more students are interested in a better job rather than finding an entry level job.

One of the more significant variables among the Centers is the number of hours per week students attend class. At John Adams the median is five hours whereas about 45% of Alemany students attend 18 or more hours a week as do 47% of Skills Center students. Only ten percent of Chinatown students attend that much; but 34% are taking ten hours of course work.

More than one in three students attended classes during the summer with almost one in two at Alemany but only one in five at John Adams and the Skills Center. If they had not attended either last spring or summer they were just as likely to have attended a year or more ago or not at all. Some 30% of John Adams students had never taken a Centers class before with 16% of Chinatown students being new. Other Centers fall in-between.

Friends were the predominant source of knowledge about the class ranging from 37% at John Adams to 75% at Alemany. At John Adams teachers and/or counselors were important to 25% of the students in selecting the class; at other centers that particular response was selected by about 12%. The difference signifies both difference in programs as well as student interpretation of reason for attending any class or attending a specific class. At Alemany for example only 3% of its students attended as a direct response to publicity sent to the home compared to 16% of Skills Center students.

About three of five students at Alemany, Mission and Skills Center are not employed now but for different reasons. Of Alemany students, 29% are full time students whereas 30% of Mission students are retired. Chinatown students are most actively in the labor force, either working or looking for work and mostly in the private sector. Almost as many students in each Center would like job placement assistance as list their primary occupation as seeking work. But the primary desired service in most Centers is education program planning. From three to 13 students at each Center listed gay/lesbian counseling as their primary service request. This was roughly 10% of all the students who identified themselves as either gay men or lesbians, ranging from 24 to 129 at any one Center. The range of those not wanting any service ranged from 25% at Alemany to 55% at John O'Connell.

The John O'Connell students felt very strongly that they would have no problem completing the course; only 17% felt they might have a problem, one fourth of which might be financial. Of those 27% of John Adams students who might have problems, it would be in areas of personal, physical and financial problems. In all other Centers about half admitted to potential problems, particularly in speaking skills. Writing skills were more important than reading skills for Alemany and Downtown Center students but the reverse held true for Chinatown and Skills Center students.

Whereas only about 6% of the students thought they might have a financial problem ranging up to 13% at Skills Center, about 15% of all students had household incomes of less than $1,000. The median household income ranges from a low of $6,250 at Mission and Skills Center to a high of $13,600 at John Adams where one in four students reported incomes of over $30,000.

At Alemany, 96% of the students attend classes that meet four or five days a week; at Chinatown, Mission and Downtown Center the rate is over 55%. John O'Connell and Skills Center classes appear to meet largely twice a week. John O'Connell is the only Center with a significant volume attending Saturday classes, 18%. Morning classes are most popular in all Centers followed by evening. Late afternoon, 4:30-5:55 start time, accounts for 10-15% of the students at John O'Connell, Chinatown and the Downtown Center, the Centers with the largest proportion of working students.

Over the years there has been consolidation and reassignment of programs to the various Centers such that historic comparison of changes at each Center is not too meaningful for general analysis.

This brief discussion of the differences among the Centers demonstrates that each Center has a character of its own which may be lost in a discussion of the typical Center student. That diversity, largely dependent upon geography and programming, must be emphasized to assure all prospective students that there is a Center and a program to meet individual needs.

A computer summary run which shows each Center is presented as the first table in Part II. The various topical runs for all Centers combined follow in Part II and are described in following pages of this section. Runs comparable to those shown in Part II but for each individual Center are available upon request.

2.b
Community College Centers
Age

White students are a very small segment of younger students but they do account for the largest ethnic group among those students 60 and older. Conversely, minority students dominate the younger groups. However there are significant differences. Hispanic and Black students are larger proportions of students in the very young groups and then drop off significantly. The proportion of Black students and the absolute number as well is very low in the working years 25-59. The proportion does increase again in the senior years from 60 on. Hispanic students continue to drop throughout the age span. This is shown on the graph on the following page.

The educational goal of the younger students is to get a high school diploma and they are largely in the high-school and GED programs. Although 30% are full-time students, 25% are seeking work, the highest percent of any age group. But only 15% desire job placement assistance. Educational program planning and career guidance are stated needs for that age group but they do not appear to be effective in keeping the Blacks and Hispanics in school. They do rely on teachers and counselors to learn of the class and less on friends than any other age group. They may be more dissatisfied with school than any other age group. Some 14% of those under 18 and 7% of those 18-20 rated instructional quality fair or poor compared to 5% overall. Only 31% of those 20 and under rated it excellent compared to 45% overall.

The importance of a new job or better job is the most mentioned goal of the 21-34 year olds. A reentry job is selected by 2.8% of those 35-44, presumably when their children are in school. But percentage-wise, a larger proportion is selected by 3.6% of the 55-59 year olds, perhaps after retirement or widowhood. Entry level jobs is consistently selected by about 12% for ages 25-54 and then declines slightly to age 60.

Learning English is the predominant goal of those 20 to 60 yet about twice as many are in ESL programs as have that goal. This places emphasis on the fact that in all age groups learning English is not the end in itself.

The younger students attend, on the average, 12 hours of class a week; then the median is consistently 10 hours until age 60 when it drops to 6 hours. This reflects the longer hours of high-school and ESL programs.

As would be expected 66% of those under 18 are new students this semester gradually decreasing to only 11% of those 65 and older who never attended a Centers class before. And the older the student the more likely that person is a continuing student from either summer or the spring season. In the years of career change, 25-54, about 14% are returning after an absence of two or more years.

Community College Centers
Race/Ethnic

The demographics of the various race/ethnic groups of Centers students are very different representing not only different length of time in the United States but different cultures as well. The proportion of women in each ethnic group in the San Francisco population is very close to 50%. That is not so for our students. Except for Southeast Asians, there are more women ranging from 52% among Hispanics, to about 60% for Blacks, Whites and Chinese and up to 80% of the Japanese students.

	Centers Students			San Francisco Population - 1980		
	% Female	Median Age	% 60+	% Female	Median Age	% 60+
Alas/Amer Ind.	57.9	31.6	17.6	47.4	31.5	11.7
Black	61.4	31.9	19.8	50.7	29.4	13.6
White	60.6	42.7	34.3	49.9	40.2	15.2
Hispanic	52.7	29.1	7.9	50.9	28.3	12.2
Chinese	60.5	35.9	15.1	[		
Filipino	54.3	33.6	18.9	[51.2	31.2	15.1
Japanese	80.5	38.9	18.2	[		
S.E. Asian	46.5	32.8	2.5	[		
Other Asian	62.0	32.3	9.5	[		
Other	54.6	30.1	11.7			
Total	58.3	34.6	18.0	50.2	33.9	20.3

White students are the oldest group with a median age of 42.7, just slightly older than the San Francisco population. But 34% are 60 or older, more than twice as many as one would expect for the general population. Hispanics are the youngest group; half are 29 or younger, very close to the 28 years in the San Francisco population. Only 7.9% of Hispanic students are 60 or over, although 12% of the City Hispanic population is 60 or greater. Only a very small group of Southeast Asian students are 60 or older.

As might be expected there is very high correlation between the proportion of those students who are native born with those whose primary language at home is English. The apparent exception is Hispanics; there are more native born Hispanics than there are those who speak English at home but the difference is small. Filipinos and Japanese on the other hand are more likely to speak English at home even though they are not native born.

Table following shows for major race/ethnic groups the percentage who are native born and who speak English at home.

	Native born	English is Primary Language
Black	87.7	94.9
White	79.2	87.7
Hispanic	15.4	13.0
Chinese	4.8	4.7
Filipino	13.9	21.2
Japanese	33.3	40.9
All students	33.4	36.2

Only very small numbers of persons are here on visitor, student or other visas, 4% overall. However 8% of the Hispanic and 10% of the Japanese state they are on visitor's visa and 14% of Japanese are on "other" visas, possibly connected to business.

Those walking to school are most likely to be Chinese or Southeast Asians. The MUNI system is used heavily by all groups, highest by Filipinos, 54%, and lowest by Whites, 32%. Whites and Japanese are most frequent automobile drivers, - about 35% of each group drives to school. The use of car appears to correlate with income level, except for Blacks, a group for which a larger percent drive to class than might be expected from reported income. Table following shows the percentage of students who walk or drive a car to class and the median income by ethnic groups.

	walk	drive car	median income
Alas/Am Ind.	19.0	25.9	$11,220
Black	17.4	24.2	6,990
White	16.1	35.4	14,130
Hispanic	25.1	18.5	6,830
Chinese	41.7	9.9	7,335
Japanese	15.4	33.4	14,840
S.E. Asian	42.1	10.2	6,190
Other Asian	20.5	19.9	8,360
Other	22.4	20.6	7,940
All students	28.2	19.9	8,630

On average, minority groups are much less likely to have completed at least a Community College degree in the United States than Whites especially when considering education in the United States only. This relates to their goals. The principal goal of Chinese, Southeast Asians and Other Asians is to learn English; it is also the goal of 30% of the Hispanics. The number of hours in class per week is a function of that goal as most ESL classes are ten hours weekly. At least half of the Southeast Asians are in class 20 hours a week, while the median for Chinese and Hispanics is ten hours a week. White students, of whom 62% either are learning life skills or broadening their background, attend an average five hours a week. Black students, with large groups of students selecting various career related goals, attend on the average 7 hours weekly.

Only 15% of the Chinese and Southeast Asians students had never attended a Community College Centers class before this fall semester compared to 25% of other ethnic groups. Summer session with its large ESL program, drew must heavily from the Chinese and Southeast Asian population.

Although fewer White and Japanese students desired student services than other groups, the requests for education program planning and job placement were high for all groups followed by career guidance.

One in four Chinese designated speaking skills as a major problem area as did one in six or seven Japanese and Hispanic students. Financial problems were significant for 9% of Black and Hispanic students, both groups with very low median household incomes.

The question on rating of instructional quality showed differences among ethnic groups. Overall 45% of the students rated instruction excellent ranging from 62% of Whites to 30% of Chinese students. Whether there is a real difference in quality in the programs or a difference in cultural values and standards cannot be determined from available data. It is also likely that it is a factor of age; 68% of all students 65 and over felt instructional quality was excellent compared to only 28% of those 18 or younger.

Alaskan Natives/American Indians

Because this is a very small group of students, only 117 persons, any coding or reporting errors would have large impact on the data summarized and therefore small differences are not significant.

More than half the students are in the young working age group 21-44 with a median age of 33. About one in eight reported they were Vietnam or Post-Vietnam veterans. Some 30% do not speak English at home, the largest language groups being Spanish or "Other". About 15% are looking for work now and 12% would like job placement assistance. A very small number are learning skills for an entry level job but 24% are continuing their education to get a better job and 12% to train for a new occupation. The largest group, 40% are in clearly occupational classes with 12% in ESL classes and another 12% in classes for the handicapped.

About 26% attend classes which meet two days a week and a like number for five days weekly with the median six hours weekly. The request for student services is spread over all choice, with job placement and financial aid each being paramount for 12%. A similar percentage expect financial problems to be the most significant problem to keep them from completing the semester. Although 20% report household income of less than $1,000, the median income is $11,220.

Black

The typical black student is most likely to be a 32 year old female high-school graduate who relies on MUNI system to get to classes. Five percent speak a language other than English at home; a similar number were educated abroad and have a primary goal of learning English. One in five are seeking their high-school diploma or equivalent and a like number at the other end of the spectrum, broadening their background probably including the 16% who are retired. Some 60% are unemployed now including one-third who are full-time students, probably the high-school group of students. This reflects in a low median household income of $7,050.

Although one in six Black students are attending Centers classes for the first time, another one in six are returning students after an absence of two or more years. Those continuing their education, that is having attended in the spring or summer, while 46%, is lower than other ethnic groups who may be more likely to continue with ESL, but it is also lower than Whites at 55%. As a group, Blacks do want assistance; almost one in two want career guidance, educational programs planning or job placement services. And some 15% recognize a potential problem area in basic skills: reading, writing, math and study habits.

White

White students represent the oldest group; their median age is 46 years and 34% are 60 and older. More than 25% are retired yet only 18% are in classes specifically for older adults. A large group, 41% are in their most formative career years 25-44, most of whom are likely to work full time and take definitive occupational courses. Whites do not forsee problems in completing their course work and also express little need for student services although one in ten requests guidance in educational program planning.

Their median income is relatively high, $14,100; some 22% have a household income greater than $30,000. Nevertheless 11.4% have incomes of less than $3,000. Most attend classes that meet just one day a week and attend 4 or 5 hours in classes. The goals of 60% are to learn life skills and broaden their back ground; the desire for direct job related skills are very low. More than half are continuing students, although 24% have never attended and 13% have come back after an absence of a year or two.

Hispanic

The Hispanic students are most evenly split among men and women and they are the youngest ethnic group, with a median age of 29. Some 15% are native-born citizens; the foreign-born probably make up the 87% who do not speak English at home which group apparently includes some native-born. Some 13% are refugees from Central or South American and 8% are here on visitors' visas. More than half had their basic education outside of the United States. Most of those educated here have completed at least a high school diploma.

Some 60% of the Hispanic students learned of the class through a network of friends; notices mailed to the home or media events were relatively ineffective sources. Learning English was the goal of 30% and job oriented goals were important to most others; consequently they are largely in ESL or direct occupational courses. Of all Hispanic students, 31% work full-time and 18% part-time with a like number looking for work. Their median household income is among the lowest at $6,830. Three of four Hispanic students would like student services, largely in career guidance, program planning and job placement. Of those who might have a problem in completing courses, speaking skills is the most significant problem area followed by financial problems.

About 70% of the Hispanic students attend classes which meet 4 or 5 days a week with the typical student attending 10 hours weekly. Some 35% attend evening classes, compared to about 26% of all students. Concomitant with this high degree of evening classes is the very low number who are either in classes for senior or the handicapped, about half the percentage of all other students. Hispanic students rely heavily on walking and public transit.

Chinese

The median age of Chinese students is 36 and 60% are women. Five percent are native born, possibly the same 5% who speak English at home. Cantonese is the language of 79% and Mandarin of 12%. Most of their education was abroad, but of those 33% who had some education here, more than one in three have at least a community college degree. Media had little influence on drawing them to their classes with 55% learning of the class through friends. This may be because of the language barrier; 43% have the primary goal of learning English. Some 77% are in ESL programs. The difference in those two percentages illustrates the fact that learning English for many is just one step toward life skills or attaining jobs.

The typical Chinese student attends classes 10 hours weekly although one in five might be considered a full-time student, taking 18 or more hours of class weekly. Nevertheless only 9% declare themselves as full-time students. Half of the Chinese students are now employed full-time or do regular part-time work, the highest proportion of any ethnic group. Speaking skills is their greatest problem area, accounting for half of the perceived potential problems. The Chinese probably have longer term educational plans as one in three desire educational program planning services, also a higher percent than other ethnic groups. Their median income is about $7,740 with 27% having household incomes of $3,000 or less.

Filipino

The median age of Filipino students is 34 but one in five is 60 or older. The ratio of men and women is 46:54. About half of the Filipino students are citizens, with about three times as many naturalized as native born; half are permanent residents. About three of four speak Pilipino or Tagalog at home. Only 14% walk to classes, relying instead on public transit. Their median household income, at $10,850, is about midway between the highs and lows of other ethnic groups.

More than half of the Filipino students have been educated in the United States, most of whom have completed at least a high-school program. Forty percent have had more than twelve years of schooling, either here or abroad. About 10% are taking ESL courses with 50% in occupational preparatory or supplemental programs. Although 19% list their major occupation as seeking work, more 25% desire job placement assistance, this including those who might want job changes and full-time students ready for the career world. Although Filipino students are only 4% of the student population, they are 10% of all students in occupational supplementary programs.

Japanese

The typical Japanese student is more unlike any of the other ethnic minorities separately identified. Four of five students are women; they cluster in the 25-44 age group with a median age of 39. Although the number is small, just 1.4% of the student population, the 25% here on visitor or other visa account for more than 10% of all those here on such visas; perhaps they are business people or their spouses.

Their goal is about equally divided among a desire to learn English (53% speak Japanese at home), learn life skills or broaden background. Only small numbers have job oriented goals and very few are seeking employment. Their household income is highest of all groups; the median is $14,840. If they expect any problems in their course work it would be in speaking skills. Generally they do not desire any student services although 13% do want educational program planning assistance.

Southeast Asian

The Southeast Asians are the only ethnic group with more men than women, 54:46. Their median age is 33 with only 6% 55 or older. It may be that older persons were not able to immigrate. More than half are permanent residents with the remainder largely here on refugee visas. They speak a variety of languages, principally Vietnamese 39%, Cantonese 20%, Mandarin 4%, Korean and English each 2% with 33% speaking other, undesignated languages. Only 25% have completed any-level of education in the United States and most are in class to learn English or job skills; 86% are in ESL programs. Very few are employed now; more are actively seeking work and almost half consider themselves to be full-time students, with 57% attending 20 or more hours weekly.

Some three of four Southeast Asian students seek student services, with one-third requesting educational program planning assistance. More than 10% request child care services, a rate about three times as high as all other students. Speaking skills is their greatest potential problem area but reading and writing skills account for another 14%. Some 7.5% listed family/personal problems as significant, a rate twice as high as other ethnic groups. In summary 65% of Southeast Asian students indicated a problem area, a rate almost twice as high as all other ethnic group. Although their median household income was lowest at $6,190, other problems might have a greater impact than financial on completing their education.

Other Asian and Others

Other Asians account for 2.3% of the student body and are probably primarily Koreans as 43% speak Korean at home. Learning English is their primary goal and most are in ESL programs.

Only 1.4% are in the "Other" undesignated category, about 43% of whom speak English at home and a like number speak "Other" undesignated languages; one fourth list learning English as their principal goal.

2.d
Community College Centers
TOP Codes - Disciplines

S.I.Q. responses arranged by TOP (Instructional Disciplines) codes provide the opportunity to analyze characteristics of students in different disciplines. The background and objectives of students in each discipline area are of particular importance to faculty to present an appropriate delivery style. The significant disciplines with the approximate number of students enrolled in each is shown in table following:

	Enrollment		%	Median
	Number	%	Female	Age
Business/Management	3 240	10.0	73.7	30.1
Computer Science	680	2.1	54.9	31.3
Engineering Tech.	2 170	6.7	12.5	29.6
Fine/Applied Arts	1 040	3.2	68.5	62.2
Health	870	2.7	75.7	30.3
Consumer Education	4 660	14.4	77.0	66.0
ESL - Beginning	8 540	26.4	56.3	33.4
ESL - Intermediate	3 790	11.7	55.1	32.0
ESL - Advanced	1 940	6.0	52.8	28.7
General Studies	2 880	8.9	50.7	30.3
All Others	2 554	7.9		
Total	32 364	100.0	58.5	33.7

Note that 44% of the students are enrolled in ESL courses. This compares to 31% in 1978. Consumer Education also increased several percentage points. Fine and Applied Arts which now includes defunded, community service programs declined several percentage points. The humanities, letters, social sciences, foreign languages and general studies declined in importance. The strictly occupational remained about constant.

Sexual stereotyping shows in the fact that only 13% of the engineering students are women as are 76% of those in the Health Services. Business/Management is heavily geared towards females, perhaps because of the large number of clerical courses included in that overall discipline. Fine/Applied Arts and Consumer Education students are predominantly female and the median age is well over 60. Business/Management and Health are also predominantly female disciplines but their students are much younger; the median age is below the average of all students.

Business/Management students are almost equally divided among Blacks, Whites, Hispanics, Chinese and all other Asians, most of whom have at least a high-school diploma and 17% have at least an AA degree earned in the United States. Some 23% of the students are learning skills for an entry-level job with 66% having work oriented goals including better jobs and reentering the job market. Although 30% are working full-time, 24% are seeking work now and 27% would like job placement services. Their median income is 7.5% above that of all Centers students.

About one in three attend classes 6 or fewer hours per week whereas another one in three attend 18 or more hours. They attend classes offered throughout the day and evening. About 7 of 10 students are taking more than one class.

Computer Science students are predominantly women but closer to population norms. Ethnically they are similar to business/management students with the exception that there are more Chinese and fewer Filipinos and men and women are more equally represented. The students are concentrated in the 21-54 year age bracket with a median age of 31.3.

Some 27% already have a community college degree or higher and although more than half are taking courses relative to career opportunities, about one in three are studying to learn life skills and to broaden their backgrounds. Some 55% are working full-time or have regular part-time employment reflected in their median household income of $10,100, about $2,000 higher than all students.

Engineering Technology students are almost all men, 87.5%; 38% are White with the minorities being almost equally divided among Black, Hispanic, Chinese and other Asians. 65% come from homes in which English is the predominant language compared to an average of 38% division-wide, and most have a high-school diploma or GED certificate. Although most have career oriented goals, 27% are seeking to learn life skills or broaden their backgrounds, somewhat surprising as 30% are in Apprenticeship programs and 50% in Supplemental Occupational programs. Note that this illustrates the difficulty in assigning labels. Some 68% attend classes after 4:30 p.m. and mostly two days a week. The fact that 70% are working possibly explains the high household income; the median is $14,710.

Fine and Applied Arts students attend regular and community service classes for which a fee is charged in almost equal numbers. They are a more homogenous group than students in other disciplines; 45% are 65 and older; 70% are White; 42% have at least a community college degree; 85% either want to learn life skills or broaden their background; 65% attend six or fewer hours of class weekly; and if they might have a problem finishing their course, it would be physical/health related. They also are above average in income level; the median is $12,580. This is below the median of $21,040 for foreign language students, who also attend community service classes.

The Health related program students are predominantly Black women. Blacks account for 36.5% of the students, Whites 31%, Hispanic and Filipino each about 10% and relatively few Chinese and other Asians. 55% have attained a high school diploma or equivalent whereas 22% have at least an AA degree. Their goal is career oriented; 40% consider themselves to be full-time students although 75% are taking a full time class load. One in four requires financial aid assistance and a like number list financial as the possible problem to prevent them from completing the course. Their median household income is $7,210.

Consumer Education - Home Economics students are mostly 60 and older, 64% with another modal group, 27%, 25-44 years old. Although only 35% are in programs classified for Older Adults about half are retired. About 53% are White with 15% Chinese, 13% Black and 7% Hispanic. Of these students, 26% have at least a community college education and the median income is $9,750. Some 80% attend morning classes which meet just one day a week; most of the students are enrolled in just one course although one in four attend more than six hours a week.

ESL (English as a Second Language) students are differentiated among three levels of ESL as we hypothesized there would be significant differences in student characteristics at each level. There are difference as shown in tables following:

ESL Level	Respondents		Percent Attending			
	#	%	2 or more classes	9 or less hrs.	10-17 hrs.	18 or more hrs.
beginning	6 354	59.9	36.1	24.4	40.8	34.8
intermediate	2 810	26.5	61.2	20.7	34.9	44.4
advanced	1 443	13.6	68.1	19.2	28.4	52.4
all	10 607	100.0	47.1	22.5	37.2	40.3

Almost three of every five ESL students are in elementary programs with 14% in advanced courses. Only about one of three beginning students is taking more than one course compared to two of three advanced students. This shows up in the number of class hours weekly. The advanced students are in class more hours per week than the intermediate and beginning level students.

There is a slightly greater proportion of men in advanced classes but in all levels women predominate. There is an inverse correlation with age; younger students are enrolled in the advanced levels.

Sex and Age	Percent male	Median age	Percent 20 and younger	Percent 55 and older
beginning	43.7	33.4	11.2	13.5
intermediate	44.9	32.0	10.0	8.8
advanced	47.2	28.7	19.0	7.5

For some 24% of the advanced students this semester is their first semester at the Centers compared to 21% of beginning level and only 12% of the intermediate.

The ethnic composition of the students vary among the three ESL levels, particularly Chinese decline proportionately as the levels increase and Southeast Asians increase. Although only a small proportion, Whites are twice their ratio in the advanced level as in the beginning level. The Others in the advanced classes include 3.9% Filipino and 1.8% Japanese.

Ethnicity	White	Hispanic	Chinese	S.E. Asian	All Others	Total
beginning	3.0	23.2	54.7	12.7	6.4	100.0
intermediate	3.9	16.5	49.9	20.4	9.3	100.0
advanced	6.2	21.0	42.4	20.2	10.2	100.0

Ethnicity correlates well with language spoken at home. About half of the Southeast Asians speak Vietnamese at home. Cantonese and Mandarin are almost all Chinese. Other Asians speak Korean largely.

Language at home	Spanish	Cantonese	Mandarin	Vietnamese	All Others
beginning	23.2	48.8	7.2	5.5	15.3
intermediate	16.1	41.1	10.4	11.1	21.3
advanced	20.8	35.8	9.0	10.2	24.2

The advanced students are more likely to go out of the local neighborhood for classes. Some 44% of beginning students walk to class compared to 20% of advanced students with intermediate in between. The difference is largely in use of public transit although the rate of driving more than doubles from beginning to advanced levels.

The advanced students had more years of education with a lesser percent having only a foreign education.

Education	Years of education		foreign education	Education in U.S.	
	6 or less	13 or more		high-school or GED	Comm. Col. or above
beginning	29.1	15.2	77.3	5.3	7.7
intermediate	14.3	25.5	78.2	7.1	5.5
advanced	9.0	33.6	69.1	16.3	4.9

Despite the fact that most of the advanced ESL students who were educated in the United States had at least a high-school diploma, this was not enough to obviate the need for an ESL course. It is somewhat incongruous that more beginning students claim to have community college degrees or above in the United States than do advanced students, but there may have been a semantic problem with the design of the question. A larger proportion of advanced students, 61%, gave the goal of learning English compared to 52% of beginning students; some 9% of the advanced students listed College prerequisite as a goal compared to 3.7%.

Goal	learn English	College Prereq.	Entry, Better or New Job	All others	Total
beginning	52.0	2.9	17.5	27.6	100.0
intermediate	56.3	5.0	27.4	11.3	100.0
advanced	60.9	9.3	23.3	6.5	100.0

Slightly more advanced students are full-time students, perhaps clearly related with goal of college prerequisites and with the high proportion wanting educational program planning. About one in four students in each group had a full-time job and the range in median income was less than 7%, not at all significant.

Speaking skills is recognized as the greatest problem, more so for the intermediate students followed by the beginning students. The advanced students to a greater degree have solved the verbal problem and are concerned with writing skills.

Main Problem	speaking	writing	reading	others	none
beginning	26.6	3.9	7.7	21.7	40.1
intermediate	29.5	7.4	3.5	19.3	40.3
advanced	22.7	10.1	3.9	19.0	44.3

General Studies, accounting for a large group of classes not otherwise classified in a specific discipline, include students in handicapped classes (47%) and students in high-school or GED programs (33%). They were evenly divided between men and women, and with a median age of 30.3 are younger than all students. Black students are 22% of the general studies students and account for 22% of all Black students. Yet general studies accounts for only 10% of all students. There are relatively few Chinese students; they are more likely to be in the ESL classes.

This brief review of TOPS code analysis indicate some of the differences one finds in analysis of the various disciplines. The study of disciplines by Centers will probably show even larger or more significant differences. Those familiar with the specific courses will find even greater meaning in these differences and suggest areas in which changes in program or services may be implemented to better meet current or potential student needs.

2.e

Community College Centers
Special Program Categories

Centers Administration is interested in analyzing certain special programs which may include two or more TOP or discipline codes in that category or cut across disciplines. This section looks at the student clientele of these special programs. The number of students enrolled in each of these programs estimated from the S.I.Q. are shown in table following:

	Enrollment		%	Median
	Number	%	Female	Age
High-school regular	712	2.2	50.9	20.8
G.E.D.	712	2.2	46.8	23.4
Seniors	2 039	6.3	78.9	65.0
Handicapped	1 521	4.7	47.9	34.9
Occ.- Preparatory	4 240	13.1	68.9	30.0
Occ.- Supplementary	2 557	7.9	43.2	47.4
Apprenticeship	744	2.3	25.1	28.1
All ESL	15 405	47.6	56.6	32.7
All Others	4 434	13.7	67.2	34.7
Total	32 364	100.0	58.5	33.7

The median age of students in the high-school program is 20 years, yet 6% are 60 and older. Those working towards the G.E.D. are slightly older, a median age of 23.4 years with 6.6%, 60 and older. The racial mix is very different in the two groups; Blacks and Hispanics are predominant in GED courses whereas Blacks and Whites are the predominant groups in the high-school program.

Ethnic	High-School	G.E.D.
Black	27.5	46.1
White	27.6	13.1
Hispanic	14.7	24.4
Filipino	12.0	5.4
Chinese	7.7	3.5
All Others	10.5	7.5
Total	100.0	100.0

Almost 20% of the students in high-school programs claim to have at least a community college degree in this country. They may be the same 20% wanting to "broaden their background". That is consistent with the fact that 60% have a high-school diploma as their primary goal. G.E.D. students, on the other hand, want either the high-school diploma or have immediate job goals, and about 40% are new students this semester.

More than half of the high-school and G.E.D. students attend classes which meet 5 days a week, and about half attend two or more classes per week. Half of the students in high-school programs attend six or less hours per week although 30% attend 18 or more hours. In the G.E.D. program half of the students attend ten hours or less weekly while 25% attend 18 or more hours. About one in four students in each program is a full-time student while a like number is seeking work. A lesser number is working full-time.

About one-third of the students want career guidance and program planning assistance. In both categories, math skills are their largest potential problem area; some 10% of the G.E.D. students also foresee problems with reading skills. In both groups, 30% do not speak English at home. In one important way these students are very different; high-school program students have a median income of $12,460 compared to but $4,090 for G.E.D. students, perhaps related to the fact that some 20% of the high-school program students are adults who want to broaden their background.

Classes for Seniors or older adults serve almost four times as many women as men and 75% are 65 and older but 9% are 44 or younger. More than half are White with Black, Hispanic and Chinese each accounting for 11-14% of the students. About 11% each speak Spanish and Cantonese at home. For this group, location is critical. Some 24% walk and 44% use public transportation. Most of the classes are held in the morning with some in the early afternoon. Almost all students are attending with the objective to learn life skills or broaden their background with 73% attending 6 or less hours per week. Only 10% are new students this semester suggesting continuing expansion of this program as greater proportions of the population age and then join the program and continue education.

Students in the handicapped programs range over all age groups with a median age close to 35. Some 88% are native born citizens with about the same percent coming from English speaking homes. Their are fewer minorities represented than in other programs.

Black	15.4
White	59.0
Hispanic	9.6
Chinese	7.3
all others	8.7
	100.0

About half walk or take public transportation; 36% use "other" means which may be either van service or classes at their institutions, either of which emphasizes the reach-out aspect of our programs.

Although some occupational courses may be included in other programs, most have been classified in occupational-preparatory, occupational-supplemental or apprenticeship programs and account for 25% of all students. Of these clearly occupational students 56% are in preparatory programs, 34% in supplemental and 10% in Apprenticeship. As the skills level goes up, the percentage of women goes down.

	% Women	median age	median income
Occ.- Prep	68.9	30.0	$ 7,700
Occ.- Supp	43.2	47.4	7,800
Apprentice	25.1	28.1	18,700

Although the median age of apprentices is lowest of the three groupings, nevertheless 10% are 65 and older, as are 31% of those attending supplemental occupation courses. Only 5.6% of students in occupational preparatory programs are 55 or older.

This relates also to their goals. Some 56% of the apprentices are looking for entry, new or better jobs as are 72% of the occupational-preparatory students but only half as many occupational-supplementary students. Some 57% of this latter group are in those courses to learn life skills or to broaden their background.

The ethnic background of students in these three groups are also very different as are their income levels. The average household income of the occupational-preparatory students and occupational supplementary students is under $8,000 but for apprentices it is $18,700, the highest for any group separately identified. The majority of apprenticeship students are White as are only 21% of the occupational preparatory students.

	Occ.- Prep.	Occ.- Supp.	Apprentice
Black	22.1	14.9	10.6
White	21.0	32.2	51.3
Hispanic	23.6	10.1	12.4
Chinese	12.9	22.6	15.6
Filipino	10.2	9.5	3.5
All others	10.2	10.7	6.6
	100.0	100.0	100.0

The figures stress the importance of occupational programs for minority and/or women students in entry levels but also strongly suggest that the opportunity for minorities needs to be encouraged in the apprenticeship levels.

More than half the ESL students are Chinese and 15% are Southeast Asians. Hispanics account for 20%. As would be expected, the primary language spoken at home about agrees with ethnic mix, with just about 85% of Chinese speaking Cantonese at home and the balance Mandarin. In the prior section on TOP discipline codes, these ESL students are shown separately for three different ESL levels. But as a group, they account for about half our students but a much larger portion of class hours. Some 65% of the students are in classes meeting 5 days a week and some 39% take 18 or more class hours per week. ESL students attend on the average twice as many hours per week as non-ESL students, and thus one can estimate that they account for about two thirds of all class seats.

Although 55% list learning English as their major goal, 30% have immediate work oriented goals. These may not be mutually distinct goals as for the most part it is necessary to learn English first. Some 45% are already employed with another 18% looking for work and 22% are full-time students. Their median household income is $7,140, below the median of all students.

2.f
Community College Centers
Reason for Class - Objective

Students were asked to identify their major reason for taking the specific course and we find distinct differences in the student clientele dependent upon student goal. Note that a student in an ESL course might either list "learning English" as the major goal or respond with an entry level job as some knowledge of English might be required to enter the job market.

Men and women are just about equal in the eight percent of the students whose goal is either to complete a high-school diploma or college prerequisites. As the goal shifts to job related purposes the percentage of women increases. It is at its highest when the goal is learning life skills and broadening background. Age follows the same pattern.

Objective	Percent Distribution	Percent Female	Median Age
High-school & College Prereqs.	8.0	50	22
Entry or Reentry Job	14.2	58	32
Career Changes	20.7	55	31
Learn English	28.8	59	33
Life Skills	10.8	61	40
Broaden Background	17.5	64	57
Total	100.0	59	34

There seem to be very clear ethnic differences. Some 38% of all those working for high-school diplomas are Black as are 24% Hispanic and about 10% each Chinese, Filipino and Whites. The proportion of Blacks drops off to 10-15% in direct job related categories. In absolute terms, there are fewer Blacks with the goal of an entry job than there are those with a high-school objectives. Other minority groups show more students seeking entry jobs or better jobs; either they have completed their high-school work or do not feel the necessity of such a diploma This is shown in table following.

Objective	Black	White	Hispanic	Chinese	Others	All
high-school	37.7	10.6	23.6	8.5	19.6	100.0
entry job	10.7	12.2	21.7	32.1	23.3	100.0
better job	10.3	15.3	22.3	34.4	17.7	100.0
career change	15.9	25.7	26.0	22.2	10.2	100.0
reentry	13.9	34.1	11.4	27.6	13.4	100.0
all students	9.2	48.2	8.9	23.7	10.0	100.0

Of those with a goal to learn English, 49% are Chinese, about 85% of whom speak Cantonese at home with the remainder speaking Mandarin. This is shown on table following in which language is shown next to an appropriate ethnic group. For example, more people speak Cantonese and Mandarin at home than there are Chinese indicating that other groups, perhaps Southeast Asians, also speak Chinese dialects at home. About half of the Southeast Asians do speak Vietnamese.

Ethnicity		Language at Home	
Hispanic	1 751	Spanish	1 704
Chinese	4 815	Cantonese	4 069
		Mandarin	868
Japanese	140	Japanese	143
Filipino	174	Pilipino/Tagalog	192
Southeast Asian	1 716	Vietnamese	836
Other Asian/Pac Isl	362	Korean	259
White	528	English	312
Black, Others	284	Others	1 389
	9 770		9 772

There is almost perfect agreement with Spanish ethnicity and language spoken at home as there is with Japanese and Filipinos. About half of the Southeast Asians come from Vietnamese speaking homes and about one in seven speaks a language other than the eight listed. That relationship apparently holds well within all class objectives; that is, language spoken at home is a function of ethnic background and not whether goal is to learn English or is more immediately job oriented.

Although 91% of all students whose goal it is to learn English are in ESL courses, ESL courses are the principal program for two of three students whose goals is to complete college prerequisites. This emphasizes the difference between those seeking a high-school diploma or college prerequisites. Almost half of those seeking both entry jobs and better jobs are in ESL programs and not limited to occupational programs.

	Program				
Objective	ESL	Occ.	Hi-Schl or GED	Other	Total
high-school	16.0	10.4	52.1	21.5	100.0
college prereq.	65.7	18.0	4.8	11.5	100.0
entry job	46.0	39.5	2.0	12.5	100.0
better job	45.1	46.0	1.8	7.1	100.0
change occupation	29.0	45.6	2.0	23.4	100.0
reentry job	32.2	37.0	1.4	29.4	100.0
learn English	91.2	3.5	.8	4.5	100.0
life skills	15.3	32.5	1.9	50.3	100.0
broaden background	17.1	22.5	3.1	57.3	100.0
All students	47.9	23.2	4.4	24.5	100.0

Those whose goal it is to get a high-school diploma are more likely to use public transportation, 60%, than those who are seeking to get a better job or change occupation, 41%, the latter group using a car more frequently to get to class. The largest proportion of walkers are learning English. This obviously is correlated to income. Those with a goal of high-school diploma have the lowest median incomes, $5,000; the highest are in the households of those who are broadening their background, $10,660 followed by those learning life skills, $9,220 and seeking a better job $9,080. Those whose goals is learning life skills or broadening background are older and better educated; one in four is working full-time.

Objective	full time student	seeking work	full time work	median income
high-school	31.5	23.5	13.5	$ 5,000
college prereq.	30.2	19.4	19.6	6,100
entry job	28.9	33.6	15.0	9,080
better job	12.2	14.8	49.7	9,530
change occ.	14.0	15.0	36.0	8,490
reentry job	15.5	28.1	12.7	7,150
learn English	24.8	15.4	23.7	7,150
life skills	14.2	8.4	23.8	9,220
broaden background	3.8	4.2	24.0	10,160
all students	18.3	15.5	26.0	8,000

As would be expected those whose goals are entry or reentry jobs are most likely to be seeking work and those seeking a better job have a 50% chance of working now. Almost 25% of those whose goal is to attain life skills or broaden their background are employed full-time now, the same proportion as among those learning English.

Correlated with seeking work is the desire for job placement assistance, highest among those seeking entry jobs. More than one in three of those seeking to fulfill college prerequisites or learn English want educational program planning, probably concomitant with desire for increased education. Request for financial aid is also highest for the two youngest groups, those with high-school diploma and college prerequisites goals, although those seeking entry or reentry jobs identified financial problems as potentials to preventing program completion.

Those students with a goal of completing college prerequisites and getting an entry job, on the average spend more hours in class than those learning English or with other career goals; those whose goal it is to broaden their background and supplement their life skills spend the least - 5 or 6 hours. The table on the next page shows the median hours of class per week. The median does not show the bimodel distribution of attendance, particularly those learning English. Actually more attend 20 hours, 27%, than attend 10 hours weekly, 26%.

	median hours/week	% new students	% summer school
high-school	10	41.9	22.1
college prep.	18	26.6	39.3
entry job	16	23.1	36.8
better job	10	18.2	34.5
change jobs	10	25.9	25.5
reentry	10	27.5	25.9
learn English	12	19.2	44.5
life skills	6	18.8	34.4
broaden background	5	18.2	38.0
All Students	10	21.4	36.9

Some 42% of those with high-school goals are new students with 22% having attended the previous summer. This is probably related to their age and discontinuing of attendance in regular high-school classes. Less than one in five students learning English are new students with 45% having attended during the summer.

Those seeking high-school diplomas or college prerequisites are most likely to be full-time students followed by those seeking entry jobs or learning English, somewhat correlated to the number of hours per week attending class.

The need for improving speaking skills was identified by 25% of those whose goal was to learn English, as might be expected. But almost one in five of those completing college prerequisites, entry job and better jobs also identified speaking skills as a major problem area. Reading, writing and particularly math skills were identified by one in four of the high-schools students, half of whom did not expect to have any problems.

2.g
Community College Centers
Residential Planning Areas

Each student was asked to record the ZIP code of his or her residence. The responses could then be grouped into planning areas composed of one or more ZIP codes to approximate City of San Francisco planning areas adopted before the 1970 Census. The State Census Agency, through the State Chancellor's Office, prepared a 1980 Census run for us by these same ZIP code planning areas. The Department of Finance has just released a July 1, 1984 population estimate for San Francisco which shows an increase of 5.5% from 1980 to 711,800. The population figures used in this section are adjusted to the 1984 level using 1980 relationships. Table following shows the San Francisco population 18 and older and our student enrollment for each area as well as the participation rate, that proportion of San Franciscans enrolled in a Centers class.

Planning Area	San Francisco Population 18 and older	Centers Enrollment	Participation Rate
1. Outer Richmond	34 194	1 683	4.9
2. Richmond/Presidio	37 902	1 748	4.6
3. Marina	22 671	518	2.3
4. Civ/Cnt/Chinatown	59 850	4 692	7.8
5. North Beach	27 576	2 977	10.8
6. Market Street	36 995	3 107	8.4
7. Western Addition	26 555	1 068	4.0
9. Haight-Ashbury	31 906	1 133	3.6
10. Twin Peaks	24 569	550	2.2
11. Outer Mission	28 878	744	2.6
12. Inner Mission	51 262	3 787	7.4
13. Potrero	8 917	324	3.6
14. Bay View	16 850	906	5.4
16. Visitacion	23 635	1 327	5.6
17. Ingleside	45 456	1 780	3.9
18. Stonestown	36 706	809	2.2
19. Sunset	43 750	1 845	4.2
20. Parkside	33 193	1 327	4.0
Total San Fran.	590 865	30 325	5.4
Outside San Fran.		2 039	
Total		32 364	

Our students live in all areas of the City but we draw from some neighborhoods at a rate five times as great as in other areas. In the Marina, Twin Peaks and Stonestown areas only 2.2% of all adults 18 and over attend a Centers course compared to 10.8% of the North Beach area and 8.4% of the Market Street area. City-wide, the participation rate is about 5.4% or one of every 18 adults attends a Centers class.

There are very significant differences in the demographics of students in the different areas. Looking at Marina and North Beach with participation rates as either end of the spectrum, we find only 32% minorities in the former compared to 92% in the latter, most of whom are Chinese; 76% of North Beach students are in ESL programs compared to 20% of Marina students. Significant differences are shown in the following chart. Also included are some statistics from the 1980 Census.

	Marina	North Beach
Students		
Median Age	40.5	35.0
% Minority	32.2	91.7
% Speak English at home	71.9	10.1
% Learn English	13.6	40.7
% Broaden Background	42.9	18.1
Median Hours week	4	10
% New Students	25.6	15.1
Median Income	$19,500	$8,100
% Community Service Funding	20.3	3.6
% Walk	36.3	68.8
Census		
% Minority	10.8	61.8
% Speak English at home	78.4	38.0
% Enrolled in College	11.1	9.5
Median Income	$18,540	$16,010

Note that in both areas larger proportions of students are minorities than are residents of the area. In the North Beach area 38% of the residents speak English at home compared to only 10% of the students. As all the 62% who do not speak English at home are not enrolled in our classes, this is a pool of potential students. As resident income is two times that of area students, learning English might develop real economic benefits. The fact that the median income of our students from the Marina is higher than that of residents probably reflects in large degree the clientele taking community service courses at the Fort Mason. Note also that from Census data a similar proportion of area residents attend College classes; it is not known whether the Centers, as a post-secondary institution, conforms to the Census definition of College.

Although two areas with different participation rates are different, it does not follow that two areas with the same participation rate are similar. Western Addition and Ingleside with about 4% participation rates are very different from each other as are Outer Richmond and Bay View with 4.9-5.4% participation rates. The table on the next page shows these differences:

	Western Addition	Ingleside	Outer Richmond	Bay View
Students				
Median Age	44.1	32.1	39.7	33.3
% Minority	74.9	80.1	74.4	92.0
% Black	41.4	11.3	2.0	65.1
% English spoken at home	68.1	36.9	26.7	76.2
% Learn English	18.1	18.5	41.8	10.6
% Broaden Background	32.7	16.5	15.4	15.0
Median Hours/week	6	9	10	9
% new students	19.2	23.3	18.7	23.7
Median income	$6,390	$9,330	$8,920	$7,360
% work Full Time	17.6	29.9	25.0	27.3
% walk	29.8	7.2	7.4	13.4
Census				
% Minority	50.9	62.2	45.9	85.3
% Black	35.9	14.4	2.3	72.3
% Speak English at home	83.9	52.8	52.8	84.5
% Enrolled in College	10.6	8.6	14.5	6.6
Median Income	$14,040	$18,272	$18,539	$13,056

The lower section of the table indicates certain parameters from the 1980 Census. Although the participation rate is fairly close in these four areas, the percent enrolled in College from Census data shows a very much wider variation. In all areas, the percentage of minorities in our student body is larger than the percentage of minorities in the population and the percentage of those speaking English at home is smaller than the total population. What appears from the figures is that ethnic-language patterns are significant determinants of school attendance and geography plays no role other than the fact that certain areas are more dominant for different ethnic groups. Even median income level does not seem to be correlated to participation rate, perhaps because statistically the median does not give weight to more extreme values. Nor is student income related to population income.

The proportion of students who walk to school varies considerably for each planning area but it is does not seem to relate to participation rate. Thus decentralizing classes further does not appear to be warranted; the Muni system seems to offer necessary mobility. This can be investigated more closely using the planning area runs for each Center, where both geography and program become more evident.

One of the important objectives of a geographic analysis was to determine if targeted public relations mailings to a specific ZIP code area is effective. Knowing the characteristics of students we serve, the population base in a ZIP code area, the kinds of programs to which we give high priority and the demographics of students in those programs, decisions can be made about publicizing our educational programs in selected areas. Such needs assessment and selective mailing offer a cost-effective opportunity. The percentage of students who learned about the class from either a district schedule or Center notice sent to their home ranged from 32% in the Marina to 5% in the Market Street area with an average of 9%. Of course, it is possible that publicity made potential students more susceptible to suggestions from friends or gave them impetus to inquire of staff at a Center.

The Centers which students from each planning area attend as well as the special programs in which they are enrolled, in addition to student demographics, show in the computer runs in Part II of this volume.

2.h

Community College Centers

Date of Last Class

Although the question has been asked since 1976, this year was the first time we requested a computer run to determine whether there are significant differences among new students, continuing students and those who are returning after an absence of a year or two.

last attended	%	median age	24 & younger	60 or older
summer 1984	34.6	37.9	19.7	24.4
spring 1984	22.6	37.9	17.4	21.3
fall 1983	10.3	31.9	27.8	11.9
2 or more years ago	10.7	35.8	15.4	12.0
never	21.8	30.3	9.7	34.2
all	100.0	34.6	22.8	17.9

These figures would seem to indicate that about three of five of our students are continuing from either the Spring or Summer semester. And one in ten do return after a lapse of two or more years. The first time students, not surprisingly, are the youngest; 34 percent are 24 or younger with a median age of 30.3 years. Continuing students, are the oldest with a median age of 37.9. Returning students are in between. Perhaps those who attended a year or more ago are now returning for job upgrades which appears to be borne out by the statistics for their objectives; perhaps they recognize value of "life-long learning".

goal	job related	learn English	broaden background	other reasons	total
summer 1984	29.5	32.9	21.2	16.4	100.0
spring 1984	31.4	26.7	22.4	19.5	100.0
fall 1983	39.3	27.9	14.9	17.9	100.0
2 or more years ago	40.8	18.8	20.0	20.4	100.0
never	34.6	25.1	18.0	22.3	100.0
all	33.3	27.8	20.0	18.9	100.0

The observable ethnic pattern is that the Chinese students become an increasingly greater percentage of the student body as they continue in class. White and especially Black and Hispanic students are greater proportions of new students with lesser percentages of returning and still lesser continuing. This may be related to program.

	Continuing spring or summer, 1984	Returning one or more years ago	New
Black	7.3	11.9	11.1
White	22.9	24.2	26.7
Hispanic	14.2	17.3	21.4
Chinese	38.6	30.0	24.3
Other	17.0	16.6	16.5
all	100.0	100.0	100.0

More than half of the only prior education of those continuing from summer school was foreign, and they were in ESL programs. This compares to only 27% of those who last attended two or more years ago who had foreign educations and 30% were in ESL programs. The other groups were in between. These long-ago students are more likely to be employed, especially in government, 13.1% compared to 3.2% of summer school continuers and 7.1% of those who last attended a year ago. Does this suggest that government motivates its clientele to return to school either positively for promotion, or negatively for new job.

Some 32% of returning students are now taking occupational programs compared to only 18% of summer school continuers. Their median income is approximately $5,000 higher than returning summer school students. About one third of these long-ago students drive to class as against only 12% of summer school students, about one third of whom walk to class. This correlates perhaps with the high proportion of ESL program in the summer, in locations convenient for large numbers of students. Nevertheless, some 30% of those returning after two or more years are in ESL programs with 32% in occupational programs and 26% general programs.

	High-school GED	Older Adult	Handi-capped	Occ-	ESL	Other
summer 1984	2.3	10.3	4.8	17.9	57.1	7.4
spring 1984	3.2	8.8	3.8	25.2	43.9	15.1
fall 1983	4.7	3.6	1.7	25.2	49.3	15.5
2 or more years ago	4.5	4.0	3.6	31.6	30.5	25.8
never	8.3	3.0	3.2	25.2	41.0	19.1
Total	4.3	7.0	3.8	23.4	47.0	14.5

There seems to be a difference in the persistence patterns which would be worth pursuing by TOP-discipline codes and at each individual center.

2.i
Community College Centers
Funding Source

Most of our classes are funded under standard state apportionment. A small group are community service courses, particularly arts and language, which are supported by student fees. There are also several JTPA and VEA classes as well as other contract, primarily Apprenticeship, which has a different funding formula. Students in state supported (ADA) classes are 95% of the total with Community Service and Other Contracts, primarily Apprenticeship each accounting for more than 2%.

The community service students are older and wealthier than those in state funded classes as shown in table following. One in three are minority students compared to fours of five students for which we receive state apportionment.

	Community Service	State Apportionment	Other Contract
percent female	64.1	59.1	25.8
median age	40.6	33.9	27.2
median income	$15 200	$7 800	$19 970
percent minority	32.7	80.4	50.1

Although some of the community service students have work related goals, almost half do want to broaden their background. This relates to the statistic that half already have at least a community college degree. Most community service students are taking just one class but 28% are taking two or more.

Apprentices made up almost 70% of the other contract component and are better described in that special program category. The other groups are too small for analysis; the miscoding of any one class would have an unduly large effect on the statistics.

2.j
Community College Centers
Time of Classes

As might be expected, there were differences in the students attending morning, afternoon and evening classes. A large part of the difference can be explained by the fact that senior adults attend classes in the morning or early afternoon and they are most likely to be women.

	all	% Female	% 20& under	% 25-44	% 60 & older
morning	46.8	62.4	11.3	40.8	22.6
noon - 2.55 p.m.	19.2	61.7	13.7	42.1	16.1
3:00 - 4:25 p.m	5.7	57.1	15.4	46.0	9.2
4:30 - 5:55 p.m	6.5	57.0	9.7	52.3	4.2
6:00 - 7:55 p.m	20.1	48.8	10.2	55.1	4.6
8:00 and later	1.7	40.8	8.6	58.7	3.9
total	100.0	58.5	11.6	45.4	15.5

Evening and late afternoon classes are attended largely by employed persons for whom a better job is the desired goal. Nevertheless in the evening, about half of the students do attend ESL programs. The median income of evening students, and especially late evening, is considerably higher than of morning students; one fourth of the late evening students are apprenticeship students.

It should be clearly noted that the pattern of attendance hours is only peripherally related to these enrollment patterns because of the class hours per student. Only 19% of evening students attend more than one class as compared to 45% of morning students. The median hours of attendance of evening students is eight hours compared to ten for morning students. Afternoon students have the highest median of 14 hours and 75% attend more than one class. In the 3:00 - 4:25 p.m. time slot although only a small portion of total enrollment, 67.5% of the students are in ESL programs.

2.k
Community College Centers
Gay Men and Lesbians

Some 563 persons attending the Centers Division identified themselves as either gay men or lesbians or about 2.3% of S.I.Q. respondents. It is unknown, of course, how many homosexuals did not choose to identify themselves, or whether any persons responded to that question in error. It had been suggested that some ESL students misunderstood the question.

The 202 lesbians are, on the average, two years younger than the gay men. The median age of lesbians is 29.4 and of gay men 31.4. The median age of all Centers students is 34.2. Only 11% of the homosexual students are 45 or older compared to 32% of all Centers students.

About 43% of the homosexual students are White compared to 24% of all Centers students as shown in table following.

	Gay Men	Lesbians	Homosexuals	%	All Students
Black	19	14	33	5.9	9.1
White	179	60	239	42.8	23.8
Hispanic	55	11	66	11.8	16.9
Chinese	55	71	126	22.6	33.4
S.E.Asian	24	20	44	7.9	7.0
All others	25	25	50	9.0	9.8
All	357	201	558	100.0	100.0

There appears to be a different relationship between gay men and lesbians in each ethnic group. The reader is reminded again that statistical errors, when we are speaking of small numbers, may be significant.

Some 35% of homosexual students had never attended a Centers class prior to Fall 1984 and 18% attended two or more years ago, both percents greater than the total student body. About 35% were continuing students from spring or summer.

In keeping with the pattern of age and ethnicity were their class objectives. Some 23% attended to learn English and 12% to broaden their background. Almost half had occupational goals, a higher rate than the total student body. This shows up also in the fact that gay men and lesbians in occupational preparatory classes were at a rate two times that of the general student body. Business and Management were the dominant disciplines in which they are enrolled.

The homosexual students live in all areas of the City but with a heavier concentration in the Market Street area, the Haight-Ashbury and the Outer Mission. A table summarizing the demographics of gay men and lesbians is in Section 4 of this volume.

City College

3.a
City College of San Francisco
Age

At City College during the day there are slightly more men than women, 50.9% to 49.1%. This is because the large majority of day students are between 20 and 34 years old and women predominate in those age cohorts under 20 and over 35. In evening division, women predominate in all age groups except 65 and older. This appears to signify that women do not attend day classes to the same degree as men during their child-bearing years and older women do not attend night classes.

Through 24 years of age, 80-85% of the day students are minorities; it reduces to about 50% after age 35, particularly because of the drop in older Chinese students. Blacks and Hispanics are represented in all age groups at about the same rate. These same relationships hold for evening division also except that there are fewer minorities proportionately in evening division. See chart on page 3.2.

Less than half of the 20-24 year olds attending during the day speak English at home, although more than half of the 18-19 year olds do. The percent speaking English at home increases as the students get older, correlating with the fewer Chinese as mentioned above. Except for the few students under 18, larger proportions of evening students speak English at home than do day students.

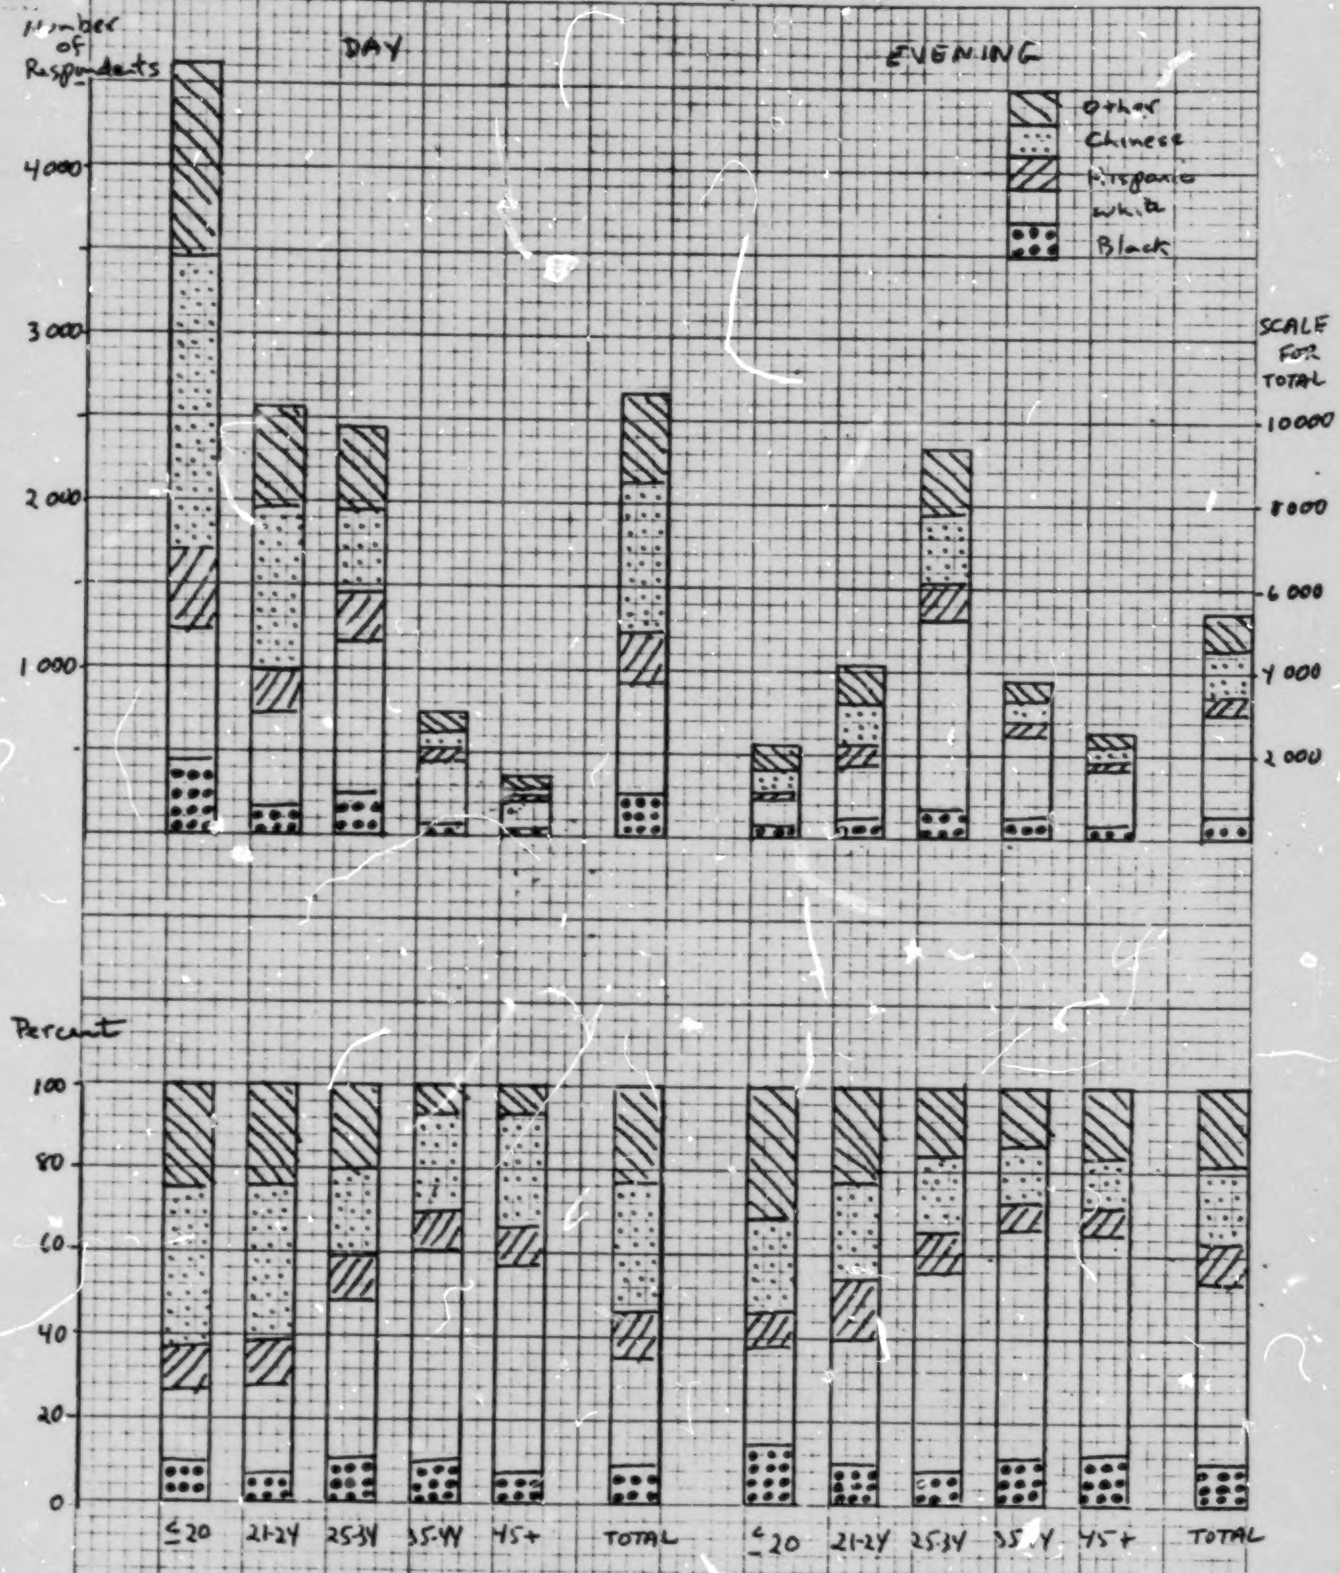
The use of public transportation starts high for the younger students, about 60% in day and 40% in evening, and drops as students age with the use of automobile increasing correspondingly. This correlates with incomes in the later years but not earlier. Interestingly the very youngest student have higher than average household incomes as can be seen in table following.

	Median income		% working full time	
	day	night	day	night
under 18	$14 500	$25 000	11.9	21.2
18 - 19	14 300	14 290	15.2	35.9
20	12 450	15 000	18.3	43.2
21 - 24	10 350	13 960	27.7	65.6
25 - 34	9 540	18 310	36.1	77.0
35 - 44	12 350	22 640	35.3	76.4
45 - 54	12 870	24 240	19.4	68.2
55 - 59	17 900	24 940	24.2	68.6
60 - 64	19 140	19 020	17.8	45.0
65 & older	16 400	23 680	3.9	18.7
All Students	11 710	18 330	24.7	68.4

The explanation may lay in the fact that the younger students live with their parents and therefore their household incomes are higher than those of young persons starting on their own. The lowest median income is attributed to those 25-34 year old day students, the age bracket that

NATIONAL
12 280

ETHNICITY BY AGE



10 Squares to the Inch

shows the highest percent working full time. Another indication of the financial plight of that age group is the fact that 21% listed financial problems and 17% work conflicts as possible problems in completing the semester compared to 14% and 11% respectively of all other students.

Day Only

Two out of three students 20 and younger have a transfer goal; almost one of two 25-34 year olds have that same goal as do one of three in the 35-44 cohort dropping down to one of five up to age 60. Of those who plan to transfer about half plan to transfer to San Francisco State in all age groups. U.C. Berkeley is the second largest choice accounting for close to 15% in all age groups. In all age groups more students plan to transfer than are in the transfer program.

Until about 34 the typical student takes 12 units dropping to eight units for the 35-54 year olds and then to three for the older students. This relates to the transfer goal of that age cohort and the intensity of their education.

As would be expected 80% of those under 18 are attending their first CCSF class with 18-19 year olds dropping to half that rate. From that age on about 12% are new students, and 16% are returning after an absence of one year. Some 16% of the 21-24 year olds have already completed 61 or more units at CCSF exceeded only by the 55-59 year olds at 24%. The typical 20-24 year old has completed 30 units dropping down to 20 units as student age. Although only one percent of the students are 60 or older. those older students are continuing or former students taking only one course.

Evening

Although evening students are less likely to be in a transfer program than day students, more than half of those students under age 24 are in transfer programs, and even more have ultimate transfer plans. For example 57% of the 20 year old evening students are in transfer programs but only 22% have no transfer plans. Only 26% of the 25-34 year olds have the immediate goal to complete a transfer program yet only 50% have no ultimate transfer plans. This suggests that transferring is a longer range goal for students who must first respond to shorter range needs, either occupational or of "personal interest".

The fact that the younger students, those 20 and younger, are more like day students in their goals and units taken is explained by the fact that about half of them are both day and evening students compared to about 15% of those 25 and older. The median units taken for evening students 20 and younger is ten because they are taking day courses as well. It drops to three for those 35 and older. And at three units a semester, these older students accumulate CCSF credits slowly. The typical 21-24 year old has accumulated twelve units and the 25-34 year old only nine. As 72% of both age groups are continuing or returning students, one might think the older students should have accumulated more units. It appears that the number of units accumulated correlates with the educational goal; the greater the interest in transfer programs, the larger the number of units completed except of course for those 19 and younger who are just starting their CCSF experience.

Counseling services are in demand by younger students but at a higher rate during day as shown in table following.

Counseling Service	% Distr.	career guidance	ed. prog. planning	transfer info	others	none
Day						
18 - 19	25.1	30.5	20.4	22.4	16.4	10.3
20	13.2	27.2	17.1	23.3	17.9	14.5
21 - 24	23.9	25.3	19.3	20.5	19.0	15.9
25 - 34	23.0	23.5	18.4	15.9	22.4	19.8
35 - 44	6.9	22.6	19.8	8.7	23.7	25.2
all students	100.0	26.2	19.3	18.9	19.5	16.1
Evening						
18 - 19	5.4	22.0	18.3	24.1	18.0	17.6
20	4.0	25.1	21.0	26.9	10.1	16.9
21 - 24	18.4	20.2	16.9	16.9	15.4	30.6
25 - 34	41.9	18.6	13.6	9.4	14.2	44.2
35 - 44	17.2	13.5	12.7	7.1	14.7	52.0
all students	100.0	17.6	14.2	11.3	15.4	41.5

Career guidance is requested by all age groups whereas transfer information is desired by the younger students. Job seeking skills is the principal counseling service in the "other" category above.

In terms of student services, job placement assistance and financial aid got the most requests along with student financial aid as shown in table below:

Student Service	financial aid	job placement	study skills	all others	none
Day					
18 - 19	25.7	23.5	8.8	17.7	24.3
20	26.0	23.9	9.1	18.1	22.9
21 - 24	25.4	21.2	10.4	18.0	25.0
25 - 34	24.8	17.8	12.2	18.7	26.5
35 - 44	21.5	18.7	11.2	14.4	34.2
all students	24.5	21.2	10.2	18.0	26.1
Evening					
18 - 19	24.6	17.3	6.2	22.8	29.1
20	24.1	20.8	6.9	16.3	31.9
21 - 24	20.0	15.3	8.3	14.4	42.0
25 - 34	12.2	13.2	8.1	12.9	53.6
35 - 44	6.4	10.1	7.0	10.8	65.7
all students	13.0	13.0	7.6	14.5	51.9

The proportion of day students desiring student financial aid did not decrease significantly for students older than the "traditional" college age; study skills assistance increased which may be a function of time away from study. In evening division, expressed need for both financial aid and job placement assistance dropped off for students as they got older. However the need for study skills assistance for the 35-44 year olds dropped off only 15% from the rate of the 21-24 year olds, the largest cohort for study skills assistance.

It is quite possible that if students were able to select more than one student service, more would have selected study skills as study skills and study habits were identified as the largest potential problem area for younger students and all the skills, reading, writing, speaking and math also were consistently large as shown in the following.

Problem Area	study habits	basic skills	financial	work conflicts	all others
Day					
18 - 19	13.6	15.4	11.4	8.4	51.2
20	11.6	17.6	14.7	9.6	46.5
21 - 24	9.1	16.7	18.9	14.0	41.3
25 - 34	4.3	14.2	20.8	16.6	44.1
35 - 44	2.8	11.6	16.4	15.6	53.6
all	9.1	15.2	15.9	12.2	47.6
Evening					
18 - 19	14.1	16.2	7.1	11.8	50.8
20	11.2	9.8	11.6	15.3	52.1
21 - 24	9.4	9.2	9.7	16.7	55.0
25 - 34	5.0	7.0	6.6	21.5	59.9
35 - 44	4.5	6.2	4.1	19.6	65.6
all	6.3	8.3	6.6	18.1	60.7

Study habits were identified by a larger portion of older students than younger students although dropping with age. Basic skills were identified by a large portion of 18-19 year olds but still recognized as a significant problem for 6% of the 35-44 year olds. About one in five day students 25-34 years old identified financial problems as the potential stumbling block confirming the large numbers who would like financial aid. Work conflicts were more important potential problem areas for that age group in the evening division.

3.b
City College of San Francisco
Ethnic

Although total College day students are fairly equally divided among men and women, there are ethnic differences. Alaskan Natives/American Indians, Southeast Asians, and to a lesser degree Other Asians and Chinese students are predominantly male. Evening division students are mostly female with a significant difference in Southeast Asians, 65% of whom are men. Minority students, both day and night, are younger than White students as shown on table following:

	Day			Evening		
	% Dist.	% Female	Median Age	% Dist.	% Female	Median Age
A.N./Am. Ind.	.8	41.1	22.3	2.8	48.2	25.3
Black	9.1	58.4	22.2	10.9	54.1	30.2
White	26.2	51.9	25.8	43.1	55.7	31.9
Hispanic	10.4	48.3	22.2	9.1	53.0	28.0
Chinese	31.6	45.9	20.9	17.8	53.1	28.0
Filipino	9.0	53.8	20.5	6.6	56.4	27.0
Japanese	1.7	54.8	21.1	1.4	59.0	29.0
S.E. Asian	4.8	36.4	22.8	3.0	35.9	28.5
Other Asian	3.1	41.7	22.2	1.8	56.2	25.9
Other	3.3	45.6	23.4	3.5	50.5	34.4
Total	100.0	49.1	22.2	100.0	54.0	29.1

For most ethnic groups, about the same proportion speak English at home as are native born. However 53% of the Hispanics in day division are native born but only 40% speak English at home, suggesting that their parents do not speak English at home. However, in the evening division the proportions are about equal.

	Day			Evening		
	Native Born	English Primary Language	At least H.S. dipl. in U.S.	Native Born	English Primary Language	At least H.S. dipl. in U.S.
Black	89.5	94.6	97.0	75.5	81.5	94.2
White	90.2	93.3	95.3	90.6	94.8	95.8
Hispanic	53.2	40.4	87.5	48.9	46.1	86.0
Chinese	27.2	25.8	80.4	29.2	29.3	80.0
Filipino	23.5	40.0	86.9	18.5	34.8	69.6
Japanese	66.3	65.4	82.3	67.9	80.8	88.3
S.E. Asian	2.3	7.1	72.6	1.8	9.5	62.5

Although most students have completed at least the high school level in the United States, Asians, particularly Southeast Asians, have not. This correlates of course, with the percent who are foreign born. There seems to be an ethnic difference in the reasons for selecting City College. Table following shows the principal reasons selected.

	Black	White	Hisp.	Chin.	Filip.	All Others	All Stdts.
Day							
lower fees	21.9	36.3	25.6	30.1	32.3	25.9	30.1
special prog.	20.5	24.4	22.1	13.2	14.8	21.5	19.0
live at home	14.7	6.9	10.3	15.1	11.6	9.5	11.3

all others	41.1	28.2	36.9	33.4	29.3	38.8	32.9
total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
median income	$16,850	19,970	15,180	17,730	19,640	-	18,330

Although lower fees was given as the dominant reason for choosing City College among all ethnic groups in day and evening, it was selected by a much higher proportion of White students than of minority students, particularly higher than Blacks and Hispanics. Even when combining with "live at home" which may be an economic as well as a cultural reason, the proportion of Whites selecting economic reasons is still higher. The level of household income surprisingly relates to importance of lower fees. The higher the median income level of each ethnic group the more important is the selection of low fee as the predominant choice. This holds for day and evening both.

White students also select special programs to a greater degree than other ethnic groups. One might infer from these figures that White students feel they have more opportunities available to them and so the selection of CCSF is a very deliberate decision based on costs or availability of special program. The data, of course, do not define a specific conclusion but rather are suggestive that income level is a dominant factor as much or more so than ethnicity. Certainly it bears further investigation.

There does not seem to be significant ethnic differences in either persistence at City College as measured by period of last attendance or number of units completed for day students. For evening division, 35% of Whites are new students, compared to about 17% of Blacks and Chinese and 25% of all other ethnic groups.

For all groups except Japanese day students, more students had not completed any units at CCSF than had never been there before implying that they either failed or dropped prior courses. Numerically, the difference was greatest for Whites but percentage-wise for Blacks in both day and evening. These "second chance" students may also reflect the fact that Blacks expect to have problems with basic skills and study habits at a rate twice as high as Whites. The rate for Hispanics is about the same as Blacks but Chinese and Southeast Asians expect greater problems primarily because of language. Potential problems for evening students are perceived to be less than for day students in all ethnic groups.

Some form of counselling services is desired by about 90% of students in each ethnic group except Whites, of whom only 74% desire some such assistance. Transfer information is desired at a higher rate by Other Asians, Japanese and Chinese than other ethnic groups for whom the predominant desired service is career guidance followed by educational program planning. The other counseling services may be important to students but those related to educational planning are their first needs.

Of the category of students services, financial aid was very important to Blacks and Asians and less so to Hispanics and Whites. Job placement was desired by about one in five students in each ethnic group. More than 35% of the Japanese students did not desire any student service; for other ethnic groups the rate of those who did not desire any student service was about half that rate.

3.c
City College of San Francisco
Educational Goal

Students were asked to identify their primary educational goal and student demography varies dependent upon the goal. The educational goal to transfer is greatest among both day and evening students. The transfer student is much younger than his colleagues with a median age of 20 compared to 28 for all day division students. The evening transfer student is five years older and more likely to be a woman. In both day and evening division the older students were in school to advance in their occupation and for personal interest.

	Day			Evening		
	% Dist.	% female	median age	% Dist.	% female	median age
transfer program	56.7	47.0	20.0	30.5	51.4	25.3
two year program	15.6	51.1	22.4	7.2	54.2	27.5
semi-pro cert.	5.0	53.9	24.4	4.9	54.3	30.5
entry level job	3.7	47.6	22.7	2.9	47.7	28.6
advance in occ.	2.9	50.0	28.6	9.7	53.2	32.6
change occupation	4.0	54.0	31.3	6.6	58.5	31.8
determine ability	2.4	53.3	23.9	3.9	60.7	32.1
improve English	1.9	52.7	24.9	2.4	50.4	31.8
personal interest	5.0	54.6	29.6	27.6	55.6	32.7
other	2.7	48.4	27.1	4.3	56.4	31.2
total	100.0	49.0	27.9	100.0	54.0	30.0

The ethnic differences among students selecting the specified educational goals are significant. As minority students made up 74% of the student body in the day and 57% in the evening, one would expect minorities to represent a greater proportion of students in each goal category. However in day more Whites seek to change their occupations than do minority students, perhaps reflecting the greater proportion of Whites now working. In evening division, 60% of those in class for personal interest are Whites, perhaps also reflecting the job situation.

The proportion of minorities with the objective of learning English is, as would be expected, very high. The proportion of minorities with a transfer objective or waiting to complete a two year program also is higher than for other goals.

	Day		Evening	
	White	Minorities	White	Minorities
transfer	21.6	78.4	31.6	68.4
two year program	24.0	76.0	28.0	72.0
semi-pro cert.	34.7	65.3	38.9	61.1
entry level job	26.2	73.8	31.1	68.9
advance in occ.	41.9	58.1	48.0	52.0
change occupation	52.0	48.0	48.1	51.9
determine ability	32.4	67.6	43.9	56.1
improve English	7.9	92.1	15.4	84.6
personal interest	48.0	52.0	59.5	40.5
other	33.1	66.9	41.9	58.1
total	26.2	73.8	43.2	56.8

Some 35% of the day transfer students are Chinese whereas Chinese students are only 19% of students who are studying for job advancement. In terms of numbers of students, 35 times as many Chinese students are transfer students as are studying for job advancement. About 20 times as many Black students seek to transfer as seek advancement, close to the Hispanic ratio. White students are ten times more likely to seek transfer. This emphasizes the importance of the transfer category to minorities. The S.I.Q. does not address whether that is a realistic goal. In evening division the proportion of students who are Chinese drops significantly, and Whites and Blacks increase.

Of those who seek to transfer, in the day 7% already have a community college or baccalaureate degree or above with another 12% having had some college experience. In the evening division, although the number of transfer students is smaller, 13% already have a degree and 25% have had some college work. Thus students who have transfer as a goal are not necessarily the traditional high school graduates. They include those who it may be hypothesized are taking further courses to help them succeed in a four year college and who might be taking prerequisites to change their major.

Prior Education	Hi or Below	Comm. Coll.	Some Coll.	B.A. or above	Total
Day					
Transfer	80.4	6.1	12.2	1.3	100.0
2-Year Program	78.1	5.9	13.4	2.6	100.0
Advance in Occ.	56.3	9.4	14.7	19.6	100.0
Personal Interest	47.9	10.4	14.3	27.4	100.0
Evening					
Transfer	62.2	10.2	24.8	2.8	100.0
2-Year Program	62.8	7.9	23.1	6.2	100.0
Advance in Occ.	37.5	8.0	19.9	34.6	100.0
Personal Interest	24.3	8.5	13.8	53.4	100.0

Those whose goal it is to advance in their career are much more likely to have attained a degree already. In day division some 20% already have a B.A. degree as do 35% of evening students. If the goal is personal interest then more than one in four taking day courses have already completed their B.A. as do one in two in the evening division. It is of interest that regardless of the educational goal stated, significant numbers have transfer plans. For example, 52% of day students whose goal is job advancement nevertheless expect to transfer after attainment of that goal, as do 37% of those whose goal is personal interest. In evening division, some 16% of those whose goal is personal interest also expect to transfer as do 33% of the job advancement group.

In all categories, San Francisco State is the transfer school of choice. For those whose immediate goal is transfer, U.C. Berkeley is a distant second choice followed by others in the CSU system. Of those whose immediate goal is an entry level job, 12% expect to transfer to a trade or technical school. That group expresses the largest interest in trade and technical schools.

The typical day transfer student is currently taking 13 units; those working towards a 2-year degree or semi-professional certificate are taking 12 units. Those with job related goals take 8-10 units but personal interest drops to 6 units taken. The same relationship holds in evening division; the median units for a transfer student is 7 and only 3 for personal interest.

Transfer students were more likely to have attended in the summer than any other group, in both day and evening division. Day students with a transfer or 2-year program goal were just slightly more apt to be new than corresponding evening division students. However, in the evening division, new students accounted for one in three of those whose goal was to learn English as well as personal interest, the largest group of new students. Those with personal interest goals are also the group with the lowest units per week.

About 30% of both day and evening transfer students did want transfer information; otherwise career guidance was the most desired counseling service except for those wanting to learn English who requested educational program planning.

Financial aid services was requested by 30% of the day transfer and 25% of evening transfers. It may be an important factor to keep these students in school. In other categories job placement was the big need. However, only half those numbers suggested that financial problems may keep them from completing the semester. No other pattern was discernible relative to potential problems except that the more likely the student worked the more likely that work conflicts might interfere with completion of the semester.

3.d
City College of San Francisco
Transfer Plans

Students were asked to identify the institutions to which they planned to transfer if they had transfer plans, and there appears to be significant demographic differences. A larger proportion of men plan to transfer than women; but women plan to transfer in greater proportions to San Francisco State, University of San Francisco and Golden Gate or in other words to schools in San Francisco. Only 37% of those planning to transfer to U.C. Berkeley are women, and even a lesser proportion of technical or trade school transfers are women.

Students planning to transfer to U.C. Berkeley or another U.C. campus and to a State University other than San Francisco are perhaps a year younger than those whose goal is S.F. State. Those transferring to other schools are perhaps a year older but the differences are slight. The median age of those not planning to transfer is 25.0 compared to 21.4 for all transfers.

By and large the ethnic percentage distribution is very similar regardless of the transfer option selected but there are some significant differences. Of those selecting U.C. Berkeley there are relatively fewer Black students than in other options. Almost twice as many White students anticipate private colleges as might be expected offset by the much smaller number of Chinese students planning to transfer to private institutions. Hispanic select trade and technical schools at slightly higher rate than expected and Whites at a lower rate. This is shown on table following for day division students.

	Black	White	Hispanic	Chinese	Others
S.F. State	9.7	20.2	10.7	34.1	25.3
Other State	11.0	19.4	9.6	37.7	22.3
U.C. Berkeley	5.2	24.4	10.6	39.2	20.6
Other U.C.	8.2	23.8	8.6	34.8	24.6
USF/Golden Gate	11.8	21.7	9.2	33.8	23.5
Other Public	15.2	25.4	9.1	28.9	21.4
Other Private	11.7	37.4	10.0	19.2	21.7
Trade/Tech	7.1	16.9	14.6	37.7	23.7

Household income certainly is related to the selection of "other private" institutions but not to the same degree as San Francisco private colleges, USF and Golden Gate. For the former the median income is $13,420 and for the latter $11,540. Those who opt for San Francisco State show a median income of $11,150 and those who select other Cal State campuses and the University of California have a slightly higher income of about $12,200. There is strong evidence that those who have transfer goals came to CCSF for the first two years because of the lower fees.

There is not the inverse correlation expected between household income and percentage choosing City College because of lower fees. Those planning to transfer to U.C. Berkeley or private colleges had the highest incomes and also had high percentage of choosing CCSF because of "lower fees"; they also were those most in need of financial aid, and expected financial problems to be the most significant in preventing them from completing the semester. This can be seen on table following:

	Median Income	% lower fees	% wanting transfer info	% wanting financial aid
S.F. State	$11,150	33.9	22.5	26.6
Other State	12,220	28.0	30.8	27.9
U.C. Berkeley	12,350	34.9	36.8	32.4
Other U.C.	12,060	29.2	31.9	33.1
USF/Golden Gate	11,540	30.2	22.5	21.5
Other Public	10,980	28.4	13.2	23.6
Other Private	13,420	31.8	16.3	23.1
Trade/Tech.	11,650	19.2	4.0	18.7
No Transfer	12,010	24.8	1.4	16.7

The special programs offered by CCSF were the big drawing card for those who either had no transfer plans or selected a technical or trade school. On the whole, those students took one fewer course than their university transfer counterparts.

Those desiring to transfer to U.C. Berkeley feel the greatest need for transfer information; some 37% request such service. Those wanting to transfer to San Francisco colleges, S.F. State, USF or Golden Gate, feel the need for such assistance at a much lower rate, 22%. Those transferring to a technical school much prefer career guidance and job seeking skills assistance.

The patterns discussed above for day division also seem to hold for evening students where about half the students do have transfer plans. Whereas more men than women opt for U.C. Berkeley, the ratio is closer in the evening division. Fewer Blacks opt for U.C. Berkeley as in day but a much larger percent than might be expected are planning to transfer to another U.C. campus.

Whereas 56% of those evening students with no transfer plans are White, only one in three with transfer plans is White. Relatively a greater proportion of White transfer students plan on U.C. Berkeley and other public and private schools. Minorities opt more heavily for CSU and U.C. campuses outside of San Francisco and Berkeley but heavily for USF and Golden Gate in San Francisco.

The low fees is the primary inducement to attend CCSF especially strong for those wishing to transfer to S.F. State and USF/Golden Gate. It is even stronger than special programs for the technical and trade transfers. About 11% of those with transfer plans already have completed a bachelor or higher degree in the U.S. For those who plan to attend USF/Golden Gate or other private institutions, about 20% already have degrees as contrasted to only 7% of those planning for S.F. State and 15% for U.C. Berkeley. It would appear then that these students need certain prerequisites before continuing their education elsewhere. Note that in day division only about 3% of those wanting to transfer already have a baccalaureate degree.

3.e

City College of San Francisco
Resident Areas

Each student was asked to record the ZIP code of his or her residence. Responses could then be grouped into planning areas composed of one or more ZIP code areas to approximate City of San Francisco planning areas adopted before the 1970 Census. The State Census Agency, through the Chancellor's Office, prepared a 1980 Census run for us by these same ZIP code planning areas. The Department of Finance has just released a July 1, 1984 population estimate for San Francisco which shows an increase of 5.5% from 1980 to 711,800. The population figures used in this section are adjusted to the 1984 level using 1980 relationships.

Table following shows the San Francisco population 18 and older and our student enrollment for each geographic area as well as the participation rate of City College students. It can be seen that City College serves 28 of every 1000 adults or one of every 36 adults in San Francisco attends City College. This is a lower participation rate than might otherwise be expected because of the large number of students who did not record San Francisco ZIP codes. If invalid codes were excluded, that is codes not for San Francisco or adjacent counties, then the participation rate might increase to 3.5% or one of every 29.

	San Francisco Population 18 and older	City College Enrollment			Participation Rate		
		Day	Night	Total	Day	Night	Total
Planning Area							
Outer Richmond	34 194	988	293	1 281	2.9	0.8	3.7

Stonestown	36 706	569	216	785	1.5	0.6	2.1
Sunset	43 750	1 108	400	1 508	2.5	0.9	3.4
Parkside	33 193	838	277	1 115	2.5	0.8	3.3
Total in San Francisco	590 865	12 096	4 542	16 638	2.0	0.8	2.8
Outside San Francisco		2 875	3 158	6 033			
Total		14 97[illegible]	7 700	22 671			

City College students live in all areas of the City ranging from 1.1% of adults over 18 in the Marina area to 4.0% in Visitacion. If day students only were considered the spread would be from 0.6% to 3.1% in those same areas. Despite the concern of travel at night, there are 13 evening students for every 1,000 adult residents. Although the table shows a large number of persons living outside the City, it may be overstated by those who gave invalid ZIP codes. About one third of the "outside San Francisco" students are in adjacent counties and the others probably represent invalid codes.

There ar differences in the demographics of students from the different areas. Looking at Marina and Visitacion with participation rates at either end of the spectrum, we find only 52% minorities in the former compared to 88% in the latter during the day with a completely different set of rates in the evening. Table following shows differences in other characteristics as well.

		Day		Evening	
		Marina	Visitacion	Marina	Visitacion
Students					
	Median Age	23.7	20.9	33.2	27.2
	% Minority	51.5	88.1	23.6	81.6
	% Black	2.0	17.4	1.1	17.7
	% Hispanic	5.1	10.2	5.6	12.2
	% Chinese	35.4	33.3	7.9	22.4
	% Speak English at Home	76.8	51.7	87.6	60.8
	% Lower Fees	46.9	26.7	33.7	36.5
	% Transfer Program	54.5	58.9	19.3	36.2
	Median Units	12	12	3	4.6
	% New Students	22.9	25.5	41.6	18.2
	Median Income	$14,620	$13,330	$24,780	$19,800
Census					
	% Minority	10.8	71.0		
	% Speak English at Home	78.4	54.1		
	% Enrolled in College	8.7	10.8		
	Median Income	$18,540	$18,910		
	Mean Income	$25,517	$20,914		

Marina area students with higher student incomes nevertheless place strong reliance on lower fees among day students and much less so in evening. This is related to the fact that in the evening, Marina students are much more interested in broadening their background than in transfer programs.

The table above indicates the kind of comparisons that may be made from the geographic data. There are wide differences among the students from each area. An analysis of our students and the total population of the area can suggest areas where outreach and marketing might be effective. The data in Part II of this volume gives the S.I.Q. distribution for each planning area.

3.f

City College of San Francisco
Date of Last Class

It would seem logical that students who are attending for the first time are younger and those who attended two or more years ago are older and that is what the data indicates. Those who attended last spring are just slightly older than those who are now are returning after having attended last year but two years younger than those who last attended two or more years ago.

Those who attended last a year ago are just 6% of the day students population but they signify a potential group of students who perhaps can be called second chance and thus might need special help. They include a larger proportion of minority students than those continuing from spring '84. This coincides with the small number of native born citizens and those who speak English at home. They are also less likely to have had some college work compared to spring continuing or those returning after at least two years. This is confirmed by the fact that they completed only 20 units on the average at CCSF compared to 30 units for those who attended last in the spring or summer. Although the differences are slight, they are consistent in the desire for counseling and student services. Of those who attended last a year ago, 27% expect they might have significant problems with basic skills or study habits compared to 21% of those who last attended in the spring. Their income is also lower than those who continued from the spring.

The pattern described above seems to hold for evening students also. The more recent returning student is more likely to be a minority and have more problems and completed fewer units than the continuing student or the one who returns after a longer absence.

3.g

City College of San Francisco
Units Completed

If all students completed a two year program or transferred at the end of two years, then one would expect to find in a fall S.I.Q. that half the students completed 30 units of work. One might further hypothesize that those who completed 31-45 units at CCSF are the traditional full-time community college students; new students with no prior CCSF credits may also be typical full-time students. The casual student would be the part-time student who had completed less than six units and perhaps completed only 6-15 units also. This can be confirmed by looking at the age and educational goal of those day students.

The median age of students with 1-5 units and 6-15 units completed, the casual student, is 23.5. This is 4 years older than the student with no CCSF credits, two years older than those with 16-30 units, and a year older than sophomores. The only group older than the "casual" student is the group with more than 60 units. Age correlates with the transfer goal. Less than half of the casual students have transfer as their major educational goal but it increases to more than 62% for sophomores. The casual students, on the average, take one less course than new students or sophomores and are more likely to be working full-time.

Lower fees is a less important reason for the casual student in selecting CCSF than for the sophomore student; it is least important for the new student. The median household income of the casual students is lowest, even lower than the new students. There is a $1,000 increase from freshmen to sophomore level although the percent working full-time does not change significantly with units except that 30% of the casual students work full-time compared to 23% of others.

Units Completed - Day		% lower fees	% transfer program	% basic study skills prob.	median income
casual student	1-15	29.0	48.4	25.0	$10,750
new student	none	23.7	58.3	27.6	11,370
upper freshman	16-30	34.1	59.4	26.0	11,520
sophomore	31-45	34.3	62.4	22.7	12,420
upper sophomore	46-60	33.0	61.8	20.2	12,810
beyond soph.	61+	34.4	51.5	18.3	13,030

There do not appear to be differences in counseling or other student services requested dependent upon the number of units taken except to the extent that sophomores are less interested in educational program planning but have an increasing need for transfer information. Even after completing 45 units, one in five students still expects a significant problem with basic and study skills, only a slight improvement over casual or even new students.

The relative position of each ethnic group is about the same regardless of student classification level. It appears that Chinese have more persistence if defined in terms of numbers of units completed than do either Whites, Blacks or Hispanics.

Units Completed - Day		White	Black	Hisp.	Chin.	Other
casual student	1-15	30.6	10.6	11.8	25.4	21.6
new student	none	27.3	10.8	11.2	28.9	21.8
upper freshman	16-30	26.7	8.3	9.8	32.3	22.9
sophomore	31-45	25.1	8.8	9.6	32.1	24.4
upper-sophomore	45+	21.4	6.5	8.9	40.5	22.7

Whereas Chinese students account for 25% of the casual student defined as the day student who has accumulated less than 15 units, they account for 40% of the upper sophomores. Whites, on the other hand, had a persistence rate which decreased from 30.6% of the casual student body to 21.4% of the upper sophomores.

In the evening division similar retention patterns hold by ethnic groups although to a lesser extent and in evening division a student with less than 16 units is not a casual student by definition to the same degree as in day.

Units Completed - Evening		White	Black	Hisp.	Chin.	Other
casual student	1-15	47.2	11.2	9.4	14.7	17.5
new student	none	54.1	8.9	8.6	9.9	18.5
upper freshman	16-30	36.6	11.9	10.5	18.8	22.2
sophomore	31-45	31.2	15.7	9.4	21.6	21.1
upper-sophomore	45+	27.8	10.5	7.9	34.3	19.5

A disproportionately high portion of new and casual evening students are White and a correspondingly low proportion are Chinese. As with day students, Chinese students are an increasingly larger portion of those students with large accumulated units at CCSF. Lower fees are more important as a reason for selecting CCSF than they are for day students. About one in two of the sophomores plans to transfer compared to one in four of the new students or "casual student". But then one in three of the sophomores would be classified as day students, that is they take both day and evening classes.

3.h
City College of San Francisco
Gay Men and Lesbians

At City College some 1,218 persons identified themselves as homosexuals as follows:

	Day	Night	Total
Gay Men	339	316	655
Lesbians	370	193	563
	709	509	1 218

It should be noted that there may be more than 1,218 in attendance at City College in so far as the S.I.Q. was not a one-hundred percent sample and not all homosexual students chose to identify themselves even though the questionnaires were anonymous. It also has been suggested that some people incorrectly responded to that question. However, these figures do result in a rough estimate that 7.4% of City College students identify themselves as homosexuals, 6.6% of day students and 9.1% of evening students.

The median age of homosexual students during the day is 25 and at night 31, just slightly older than other students. There are 289 gay men and 218 lesbians at City College in the 25-34 age group. The distribution by age as compared to all students is shown in table following:

Age	Day		Evening		Total Homosexual Students
	Homosexual	All	Homosexual	All	
20 and under	26.6	42.8	5.4	10.6	215
21-24	23.6	23.9	16.3	18.4	249
25-34	36.1	23.0	49.9	41.9	507
35-44	11.6	6.9	18.1	17.2	173
45 and older	2.1	3.4	10.3	11.9	67
total	100.0	100.0	100.0	100.0	1 211

One of two homosexuals at City College is White but in the day division there is a larger proportion of minority gay men and lesbians than in evening division; this pattern of more minority students in the day relative to the evening division holds also for all students.

Ethnic	Day Homo-sexual	Day All	Evening Homo-sexual	Evening All	Total Homosexual Students
Black	5.4	9.1	6.9	10.3	73
White	40.8	26.2	61.6	43.9	601
Hispanic	5.1	10.4	8.1	9.2	77
Chinese	29.5	31.6	10.6	18.0	262
all others	19.2	22.7	12.8	18.6	201
total	100.0	100.0	100.0	100.0	1 214

Although there are age and ethnic differences, there are only small differences in the pattern of educational objectives; a smaller percentage of gay men and lesbians are in transfer programs and that is probably related more to the age level of the students as younger students are more likely seeking to transfer.

Goal	Day Homo-sexual	Day All	Evening Homo-sexual	Evening All	Total Homosexual students
transfer program	46.7	56.7	26.1	30.2	464
2 year degree	17.5	15.6	6.1	7.3	155
better job or change occupation	10.7	4.9	18.3	16.5	169
broaden background	6.1	5.0	30.5	27.9	198
all others	19.0	17.8	19.0	18.1	232
	100.0	100.0	100.0	100.0	1 218

Although only 464 homosexual students at City College list transfer program as their primary educational goal, some 779 homosexual students plan to transfer to other educational institutions as shown following:

Transfer Plans	Gay Men	Lesbians	Total	%
No transfer plans	277	143	420	35.0
S.F. State	142	165	307	25.6
Other CSU	29	39	68	5.7
Berkeley	59	62	121	10.1
Other U.C.	21	24	45	3.8
USF/Golden Gate	38	33	71	5.9
Other Public	36	42	78	6.5
Other Private	28	20	48	4.[illegible]
Tech. Trade	13	28	41	3.[illegible]
Total	643	556	1 199	100.0

This pattern is very similar to that of all City College students with the dominant transfer choice to be San Francisco State followed by U.C. Berkeley.

Students were asked to identify which counseling services, if any, they would use. Apparently counseling services other than specialized services available to them were more important to most of the homosexual students. Some 95 students in the day and 74 in the evening selected counseling for gay/lesbians students; this is 14% of the homosexual student body.

	Day	Evening	Total
want gay/lesbian counseling service	95	74	169
total gay men and lesbians	708	503	1 211
% wanting gay/lesbian counseling	13.4	14.7	14.0

About one in four of the gay men and lesbians day students are new to CCSF as are one in three of the evening homosexual students. This is just slightly above the rate for all students and probably explains why 60% of the homosexual students have completed 15 or fewer units compared to 50% of all students.

Homosexual students live in all areas of the City but are more concentrated in certain areas as follows:

	Homosexual				All Students
Residence	Day	Evening	Total	%	%
Civic Center/Chinatown	77	26	103	8.4	6.5
Market Street	60	24	84	6.8	3.7
Haight Ashbury	59	38	97	7.9	3.8
Outer Mission	71	71	142	11.6	3.0
Other Area in S.F.	308	144	452	36.9	56.3
Neighbor Counties	29	17	46	3.8	8.3
Other/Invalid	108	193	301	24.6	18.4
Total	712	513	1 225	100.0	100.0

The major differences then between gay men and lesbians who have so identified themselves and the entire CCSF student body are in residential area, age and ethnicity. Educational patterns, where that data is available, seem to be related to age primarily rather than sexual orientation.

Technical and Summary Tables

4.a
Methodology and Validity

In the Centers Division a questionnaire was administered to all students in each class during a representative week in the fall. Sampling was ruled out because of the difficulty both in administering the questionnaire to less than a complete class and in determining a stratified sample of classes in each Center. We want to study characteristics of small populations of students, such as those in a specific discipline or age group at each Center, and smaller populations require larger sample percentages approaching 100%.

Students were asked to complete the questionnaire in each class they attended marking their response to indicate whether it was a first or subsequent questionnaire. For some computer runs, only the first response was used and in others, all or duplicated responses were summarized dependent upon the intent of the report. For example, where we wanted to know about students geographic residence areas only the first response was included. For data on disciplines all responses were included as a student could be taking courses in several disciplines.

A class identification sheet describing each class was submitted with the student responses for that class, allowing coded information about that class to be associated with each student's response. Thus computer runs could be made showing responses to some 25 questions separated by either characteristics of the class such as discipline or funding source or by characteristics of the student such as age or educational objective. An effort was made to secure complete responses from every class by checking the course identification number on the class identification sheet against a master list. In a few cases the S.I.Q. was administered in a later week to assure inclusion of some classes first omitted.

At City College, the S.I.Q. was administered to Day Division students as one part of the registration process. Responses from students who identified themselves as Evening Division students only were excluded from the Day Division runs. For Evening Division students, the S.I.Q. was administered in class following the Centers process. However programmatic data was not included at the College. As with the Centers division, an attempt was made to include all classes.

The questionnaires were reviewed and edited and then sent to a key-entry service for entry onto magnetic tape. Our Computer Service Department then ran test reports for each division which were used to edit and correct any obvious errors in the data, going back to divisional sources for clarification where appropriate. Computer print-outs were then prepared for all Centers and for City College Day and Evening Divisions and are shown in Part II of this volume.

The S.I.Q. responses were validated by comparison with basic age, sex and ethnic data taken from Census Week enrollment data. We found some slight differences but also a rationale to explain most of them. The reader should be advised that a survey of this type only reflects the respondents at the moment of survey. For example, a question on potential problems may yield a different response one day to the next dependent upon the actual problems as the students perceived them that day.

The basic mix of students is dependent not only upon the classes scheduled for S.I.Q. week but also student absences. Because of open enrollment and courses of varied length at the Centers, the class and student mix will always be changing. That is less so at the College evening division; students may drop but new ones will not be entering class after the first two weeks, although recognition should be given to some short length classes there. The S.I.Q. was administered to College day students as part of the registration process; some registrants did not attend class or may have discontinued all classes before Census Week but nevertheless they would be included in the S.I.Q. population.

Another caution to the reader, the small numbers are less reliable than large numbers. For example, the growth from 20 to 24 is actually 20% [(24-20) / 20] but statistically it is much less significant than say the 10% growth from 800 to 880. This should be considered when analyzing characteristics of small populations such as, for example, any of the characteristics of the Alaskan Native/American Indian group who account for 117 respondents at the Centers or less than one half of one percent of their students. An error or miscode of just one student's age for example may reflect a one percent error in age of Alaskan Native/American Indian students but could be a 14% error in that cohort of students under 18.

As a matter of fact, we have become aware of a problem in about 150 responses which resulted from the processing of late returns from some City College evening division classes. There is an identifiable overstatement of about 75 Alaskan Natives/American Indians and a like number of Black students. This seriously affects the usefulness of the data on Alaskan Natives/American Indians in evening division as it is almost half of that group of students. The error in Blacks concerns about 12%, on error rate higher than we would like, but generalizations from that data are still useful. Whatever the problem with these 150 responses will be reflected in all evening division reports. We have identified an overstatement of about 150 in the group of invalid planning area codes, but in all other fields the error seems to be randomly distributed. Thus the general caution on small numbers applies.

A last caution to the reader refers to the special codings. Although the class cover sheets were checked in the Centers Division before the data entry operation, we do know that some coding errors slipped through. A business management class might have been coded in the "all other" category rather than say "occupational-preparatory" and that error would be reflected in the records of all students in that class.

These cautions do not diminish the usefulness of the report. These problems are not large enough to question the validity of the S.I.Q. although any single cell, particularly those with small numbers, may not be statistically reliable. The reader will be less interested in exact figures; the relationships are important and the reader can use the data in that context.

In order to test the validity of the S.I.Q. population, it was checked against enrollment data on the known attributes of age, sex and ethnicity. The methodology and definitions were different in both sets of data and so slight variations would be expected. The comparisons is shown in tables on following page.

The S.I.Q. for the Centers shows a smaller proportion of students under 18 and of 25-34 year olds than would be expected from enrollment data; those 35-44 were a higher percent on the S.I.Q. than reported from enrollment data. The College S.I.Q. records slightly more very young students than would be expected from enrollment and fewer 25-34 year olds, a pattern holding for both day and evening divisions. This is somewhat surprising and yet reassuring as a different S.I.Q. methodology was used in day and evening for the S.I.Q. Part of the explanation is attributed to the fact that in the S.I.Q. a student may be counted in both day and evening if he or she is taking classes in both divisions. For enrollment purposes, a person taking classes in day and evening is considered a day student.

The male-female split from the S.I.Q. is very close to the enrollment split in each instance. However as the split is close to 50:50 the two sets of figures could be very close and still yield different majorities. This is the situation in City College where day enrollment data show 50.9% of enrollees are women and the S.I.Q. shows 50.9% are men. The difference however of less than 2 percentage points is statistically acceptable.

The ethnic mix is very close at the Centers from the two sources especially if one considers those coded non-residents by the computer formula are probably recent Southeast Asians immigrants. The ethnic enrollment data was not available at the College separately for day and night, but there is a difference in the combined College total. The S.I.Q. overstates the Asian students and understates the Blacks and Whites as compared to the enrollment data. Note the understatement of Blacks in light of the known overstatement in the S.I.Q. evening division returns.

For the Centers division an attempt to validate the S.I.Q. responses Center-by-Center was also made. The enrollment data Center-by-Center is less reliable because of problems in cut-off-dates in entering the enrollment data from each Center into the computer system and the different pattern of opening classes. Nevertheless the agreement on distribution of attributes Center-by-Center is quite high and therefore satisfactory. The distribution Center-by-Center is also adequately close such that special weighting of responses is not required.

Comparative Distribution of Enrollment and S.I.Q. Responses

	Enrollment				S.I.Q.			
		College				College		
	Centers	Day	Night	Total	Centers	Day	Night	Total
AGE								
Under 18	3.9	2.5	0.3		1.4	4.5	1.2	
18-19	5.3	23.2	2.8		5.4	25.1	5.4	
20	3.1	12.1	2.4		3.3	13.2	4.0

SAN FRANCISCO COMMUNITY COLLEGE DISTRICT

Fall 1984

COMMUNITY COLLEGE CENTERS

STUDENT INFORMATION QUESTIONNAIRE

*The Community College Center I am now attending is .... * ____
1. Alemany
2. Galileo
3. John Adams
4. Mission
5.
6. John O'Connell
7. Chinatown/North Beach
8. Skills Center
9. Downtown Center
0. Other

The information summarized from this survey will be used for planning purposes to enable us to meet the educational program needs of the adults in the community. Therefore, you will receive this questionnaire in each class that you attend. Even though you may be asked to complete it more than once, please help us by answering all questions in each class that you attend, and return the completed form to your teacher.

ZIP CODE of My Home Address is (write five numbers on lines at right) .... _ _ _ _ _

FOR EACH QUESTION, CIRCLE THE NUMBER OF ONLY *ONE* ANSWER THAT BEST DESCRIBES YOU, AND WRITE THAT NUMBER IN THE CORRECT SPACE IN THE COLUMN AT THE RIGHT.

A. Sex .... A. ____
1. male
2. female

B. Age (at last birthday) .... B. ____
1. under 18
2. 18 - 19
3. 20
4. 21 - 24
5. 25 - 34
6. 35 - 44
7. 45 - 54
8. 55 - 59
9. 60 - 64
0. 65 or older

C. Race or ethnic background .... C. ____
1. Alas. Nat./Amer. Ind.
2. Black (not Hispanic)
3. White (not Hispanic)
4. Hispanic/Latino/Chicano
5. Chinese
6. Filipino
7. Japanese
8. S.E. Asian
9. Other Asian/Pac. Islander
0. Other (specify) ____________

D. Citizenship status .... D. ____
1. U.S. citizen - native born
2. U.S. citizen - naturalized
3. permanent resident (green card)
4. refugee-parolee - S.E. Asia
5. refugee-parolee - U.S.S.R.
6. refugee-parolee - Central, S. America
7. refugee-parolee - other
8. visitor visa
9. student visa (I - 20)
0. other visa (specify) ____________

E. My primary language at home is (select only one) .... E. ____
1. Spanish
2. Cantonese
3. Filipino/Tagalog
4. Korean
5. Vietnamese
6. English
7. Mandarin
8. Japanese
9. Other (specify) ____________

F. I am a U.S. military veteran .... F. ____
1. prior to Vietnam
2. Vietnam era
3. post-Vietnam
4. no U.S. military service

G. I usually get to class mainly by .... G. ____
1. car, I drive
2. car as passenger
3. bus/streetcar
4. BART
5. bicycle
6. walking
7. motorcycle
8. other

H. Number of years of school I have completed .... H. ____
1. 6 or less
2. 7 or 8
3. 9 or 10
4. 11 or 12
5. 13 or 14
6. 15 or 16
7. 17 or more

I. In the *United States*, the highest diploma, certificate or degree I have received is .... I. ____
1. education not in the U.S.
2. did not complete elementary school
3. elementary school
4. high school
5. G.E.D. or Proficiency Certificate
6. occupational certificate
7. community college (AA or AS)
8. college or university (BA or BS)
9. post graduate (MA, PhD, MD . . .)

J. I found out about this class from .... J. ____
1. friends
2. teachers or counselors
3. District schedule sent to my home
4. this Center's notice sent to my home
5. inquiry at school
6. catalog
7. newspaper
8. radio or T.V.
9. other publicity

K. My *main* reason for taking this course is to .... K. ____
1. work for my high school diploma
2. complete my college prerequisites
3. prepare for entry-level job
4. get a better job in my present occupational field
5. change to a new occupation
6. determine my ability for a new occupation
7. reenter job market
8. learn or improve my English
9. learn specific life skills
0. broaden my background

L. The number of hours per week I attend Community College Centers classes is .... L. ____
1. 1 - 2
2. 3 - 4
3. 5 - 6
4. 7 - 9
5. 10 - 11
6. 12 - 15
7. 16 - 17
8. 18 - 23
9. 24 - 30
0. 31 or more

M. The last time I took a class offered by the Community College District was .... M. ____
1. Summer 1984
2. Spring 1984
3. Fall 1983
4. two or more years ago
5. never

N. I work for .... N. ____
1. Federal government
2. State government
3. City government
4. private business
5. self-employed
6. nonprofit agency
7. other
8. not employed now

O. My *main* occupation now is .... O. ____
1. full-time employed, 30 hours or more
2. regular part-time work
3. occasional part-time work
4. looking for work
5. full-time homemaker
6. retired
7. volunteer work
8. full-time student
9. other

P. The *one* student service I expect to use most is .... P. ____
1. career counseling and guidance
2. educational and program planning
3. job placement assistance
4. student financial aid
5. gay/lesbian counseling
6. personal problem counseling
7. child care
8. other
9. none

Q. The *main* problem I might have in finishing this class is .... Q. ____
1. poor reading skills
2. poor writing skills
3. poor speaking skills
4. poor math skills
5. poor study habits
6. family/personal problems
7. physical/health problems
8. financial
9. needed child care
0. no serious problems

R. In general, the classroom instruction I have received at Community College Centers has been .... R. ____
1. excellent
2. good
3. average
4. fair
5. poor

S. The approximate total annual income of my household is .... S. ____
1. $ 999 or less
2. $1,000 - 2,999
3. $3,000 - 4,999
4. $5,000 - 9,999
5. $10,000 - 14,999
6. $15,000 - 19,999
7. $20,000 - 29,999
8. $[illegible],000 - 39,999
9. $40,000 or more

T. I have already completed this questionnaire in another class this week .... T. ____
1. yes
2. no

U. Gay/Lesbian Identification (optional question), I am a .... U. ____
1. gay man
2. lesbian

SAN FRANCISCO COMMUNITY COLLEGE DISTRICT **Fall 1984** CITY COLLEGE OF SAN FRANCISCO

STUDENT INFORMATION QUESTIONNAIRE

Survey No. __ __

The information summarized from this survey will be used for planning purposes to enable us to meet the educational program needs of the community. Please help us by answering all questions and return the completed form to the college representative.

Please check one: 1. Day Student Only___ 2. Evening Student Only___ 3. Both Day and Evening Student___ ______

ZIP CODE of My Home Address is (write five numbers on lines at right) . . . . __ __ __ __ __

FOR EACH QUESTION, CIRCLE THE NUMBER OF ONLY *ONE* ANSWER THAT BEST DESCRIBES YOU, AND WRITE THAT NUMBER IN THE CORRECT SPACE IN THE COLUMN AT THE RIGHT.

A. Sex . . . . A. ______
1. male
2. female

B. Age (at last birthday) . . . . B. ______
1. under 18
2. 18 - 19
3. 20
4. 21 - 24
5. 25 - 34
6. 35 - 44
7. 45 - 54
8. 55 - 59
9. 60 - 64
0. 65 or older

C. Race or ethnic background . . . . C. ______
1. Alas. Nat./Amer. Ind.
2. Black (not Hispanic)
3. White (not Hispanic)
4. Hispanic/Latino/Chicano
5. Chinese
6. Filipino
7. Japanese
8. S.E. Asian
9. Other Asian/Pac. Islander
0. Other (specify)__________

D. Citizenship status . . . . D. ______
1. U.S. citizen - native born
2. U.S. citizen - naturalized
3. permanent resident (green card)
4. refugee-parolee - S.E. Asia
5. refugee-parolee - U.S.S.R.
6. refugee-parolee - Central, S. America
7. refugee-parolee - other
8. visitor visa
9. student visa (I - 20)
0. other visa (specify)__________

E. My primary language at home is (select only one) . . . . E. ______
1. Spanish
2. Cantonese
3. Filipino/Tagalog
4. Korean
5. Vietnamese
6. English
7. Mandarin
8. Japanese
9. Other (specify) __________

F. I usually get to class mainly by . . . . F. ______
1. car, I drive
2. car as passenger
3. bus/streetcar
4. BART
5. bicycle
6. walking
7. motorcycle
8. other

G. In the United States, the highest diploma, certificate or degree I have received is . . . . G. ______
1. education not in the U.S.
2. did not complete elementary school
3. elementary school
4. high school
5. G.E.D. or Proficiency Certificate
6. occupational certificate
7. community college (AA or AS)
8. some college, no degree
9. college or university (BA or BS)
0. post graduate (MA, PhD, MD . . .)

H. Outside the United States, the highest diploma, certificate or degree I have received is equivalent to . . . . . . H. ______
1. no education outside U.S.
2. did not complete elementary school
3. elementary school
4. high school
5. G.E.D. or Proficiency Certificate
6. occupational certificate
7. community college/technical school
8. some college, no degree
9. college or university (BA or BS)
0. post graduate (MA, PhD, MD . . .)

I. My *main* reason for choosing City College instead of another college was . . . . I. ______
1. parent advised
2. high school advised
3. CCSF student advised
4. to live at home
5. lower fees
6. special programs available
7. friend(s) go here
8. CCSF publicity
9. other

J. My *main* educational goal while at CCSF is to . . . . J. ______
1. transfer to a 4-year college or university
2. complete a 2-year degree program only
3. obtain a semiprofessional certificate
4. prepare for an entry level job
5. advance in present occupational field
6. change to new occupation
7. determine my ability in new occupational field
8. learn or improve my English
9. personal interest
0. other

K. After completing my goal at CCSF, I plan to transfer to . . . . K. ______
1. transferring is not part of my plans at present
2. San Francisco State University
3. other California State University
4. University of California at Berkeley
5. other University of California campus
6. University of San Francisco/Golden Gate University
7. other public or state college or university
8. other private college or university
9. a technical or trade school

L. The number of units I am taking this semester is . . . . L. ______
1. 3 or less
2. 4 or 5
3. 6
4. 7 to 9
5. 10 to 11
6. 12
7. 13 to 15
8. 16 or more

M. The last time I took a City College class was . . . . M. ______
1. Summer 1984
2. Spring 1984
3. Fall 1983
4. more than a year ago
5. never

N. The number of units I have already completed at CCSF is . . . . N. ______
1. none
2. 1 - 5
3. 6 - 15
4. 16 - 30
5. 31 - 45
6. 46 - 60
7. more than 60 units

O. My job situation now is . . . . O. ______
1. full-time employed, 30 hours or more
2. full-time homemaker
3. regular part-time work at CCSF
4. regular part-time work not at CCSF
5. occasional part-time work
6. looking for work through CCSF Placement Office
7. looking for work through other sources
8. full-time student
9. other

P. The *one* counseling service I expect to use most is . . . . P. ______
1. career counseling
2. educational program planning
3. transfer information counseling
4. personal problems counseling
5. women's re-entry to college services
6. job-seeking skills
7. counseling services for gay/lesbian students
8. counseling for ESL students
9. other
0. none

Q. Other than the counseling services, the other *one* student service I expect to use most is . . . . Q. ______
1. child care
2. student financial aid
3. job placement services
4. student health services
5. student activities
6. study skill assistance
7. other
8. none

R. The *main* problem I might have in finishing this semester is . . . . R. ______
1. poor reading/writing skills
2. poor speaking skills
3. poor math skills
4. poor study habits
5. family/personal problems
6. physical/health problems
7. financial need
8. needed child care
9. work conflicts
0. no serious problems

S. The approximate total annual income of my household is . . . . S. ______
1. $ 999 or less
2. $1,000 - 2,000
3. $3,000 - 4,999
4. $5,000 - 9,999
5. $10,000 - 14,999
6. $15,000 - 19,999
7. $20,000 - 29,999
8. $30,000 - 39,999
9. $40,000 or more

T. Evening Division students only, I have already completed this questionnaire in another class this week . . . T. ______
1. yes
2. no

U. Gay/Lesbian Identification (optional question), I am a . . . . U. ______
1. gay man
2. lesbian
